1. I'll post it till I see it on my server. Flaming cross lie

Newsgroup: rec.radio.scanner
Date: 2003-03-01 00:18:10 UTC
From: Arctic Cat <arcticcat@comcast.net>
Message-ID: <sTydneslj4sGYcKjXTWcoA@comcast.com>
Source record: 35617

Sorry if this is double posted but it doesn't seem to have made it to my news server.

A few days ago Al Patrick <arp@inet4u.com> posted the subject "Nightclub fire / Flaming Cross". In the post there was a referrence to the website http://www.resistanceradio.net , which claims the fire at the Station nightclub in West Warick, R.I. which took the lives of 97 people, began in the form of a flaming cross.

This is complete and utter rubish which I am about to demonstrate.

The first picture below is one taken from http://www.christiangallery.com/nightclub.html which can be accessed from the resistanceradio.net URL.

Click for non-html browsers - http://www.christiangallery.com/nightclubmakescross.jpg

The second picture is a screenshot from the same video footage taken from http://www.cbsnews.com/htdocs/videoplayer/newVid/framesource2.html?clip=/media/2003/02/21/video541469

Click for non-html browsers - http://mywebpages.comcast.net/arcticcat/realstation.jpg

Anyone with eyes can tell that the picture with the cross has been altered from the original. Where as the original the fire can be seen behind the lighting fixtures on the ceiling, the fire appears in front of the lighting fixtures and also in front of one of the band members in the altered picture.

It's just sick that anyone could call themselves a Christian and lie through their teeth like this.

There's also an NBC News audio clip on resistanceradio.net that has been altered to fit the site owners own demented purpose.

I know most of you kooks will still have it in your minds that the media is hiding something after reading this, but I just had to point it out that it's a sham.

I have been emailed by four individuals who have been contacted by the thief in Santa Barbara, CA trying to steal their radios. Again the info is:
1120 Laguna ST
#14
Santa Barbara, CA 93101

Phone 805-451-3042

This person has used the names Gabe Mariscal, Jeff Graham, and Jeff Kydd. At least two persons have been ripped off by this guy in trades. I would be leary of anyone in this area. He has used email addresses mojo-radio@cox.net, and gabe1972@cox.net . He has offered for trade a RS Pro 2006, Icom R75, RS Pro 43, and other equipment.

Message-ID: <m1506v84dhaqavfabovdf66vt9e1m7qtsj@4ax.com>
Source record: 35620

I've been looking for an indoor antenna for my PCR1000. Lately I've
been using a handheld antenna and it doesn't work as well as it
probably should.

There is a really nice looking one:
WiNRADiO AX-31B Active UHF Antenna

at http://www.grove-ent.com/ANT4.html

It's a little expensive and I wonder if it performs well. Does anyone
have one of these?

I live in an apartment in the city and can't really put an antenna on
my roof. Well I could, but it might cause trouble.

If anyone has any suggestions I would appreciate them.

-J

You may want to call the FBI. A friend of mine, made a complaint about a similar situation with a guy in NY city. He did not think there would be anything that would happen with the complaint, but turns out they caught this guy and are getting him for mail fraud.

They get your money, then treat you like a second class citizen.

Shucks, they don't even need your money to do that. Back in the days when they provided a trial version I downloaded it and couldn't get it to work right (it kept locking up my PC) either from my stupid-pidity or a problem with their software, guess I'll never know which. My e-mails regarding the problems went unanswered. They eventually removed trial versions. Wonder why?

Who's rules? This is an unmoderated group and the person, whoever it may be,
that started this group might have made a charter but I have yet to see it.
So since you seem to be the know-it-all about everything, who's rules
exactly am I supposed to be following?

By the way. TW. was already on the list before you even posted this so
there's no reason to warn him.

Great conventional scanner but not a very good trunk-tracker.
One of the only scanners currently available to offer instant
PL/DPL decoding plus an alpha-numeric display. No backlit
keypad though. :-(

10 channel units are the older type and are not capable of scanning.
4 and 16 channel units can be programmed to scan.

Red = transmit.
Green = signal with correct PL or DPL, speaker unmutes.
Yellow = signal without correct PL or DPL, speaker remains muted.
Flashing red = low batt.

Press the round button above the PTT to manually unmute the receiver.
If nothing happens, it has been disabled in the programming.

If you're on a community repeater, it's best to wait for the other
company to finish. Provoking a repeater war will negatively impact
everybody's ability to communicate. If the signals are weak, and their
coversations reveal they are several hundred miles away, go ahead and
key up.

While I'm at it.

Error tones:

One beep: the radio has lost programming. Bored security guards
playing with the radio will on occasion trigger this sequence: Hold
the monitor button, turn the radio on, wait for the LED to blink
twice, release the monitor button, press and release the monitor
button again. The programing is now wiped out.

Two beeps: synthesizer problems. If it occurs on every channel, the
radio has been dropped and one of the reference crystalls has
shattered. If some channels work ok, the vco needs to be tuned
better, or you are trying to use frequencies which are spaced too far
apart for the radio to handle them. If it occurs momentarily while
changing channels, this is a known bug, and nothing can be done about
it.

Three beeps: I don't remember the specific problem, but the radio is
beyond repair.

^ I've been looking for an indoor antenna ....
^ If anyone has any suggestions ....

I use a dipole run just under the ceiling in my living room. This seems to work well for everything except the weak VHF weather radio station that covers my area, so I ran a short vertical dipole along one of my windows. I keep my base scanner plugged into the horizontal dipole and the portable into the vertical dipole. Both cover all my local VHF and UHF needs.

Frank

24. antennas on car/truck, how many

Newsgroup: rec.radio.scanner
Date: 2003-03-01 14:08:05 UTC
From: JA Moran <jamoran@analon.com>

how many antennas do you have on you vehcile, car or truck... I have 5
27mhz-CB, 2/440, 10/2, 150/450 and a 800/1900 (radio-mobile tel)
I may soon add a GPS and an XM radio antenna
most are lined up down the center of the roof....

the antennas is not the problem its, where to put the equipment
connected to them.
I constructed special brackets to hold the radios and a new extended
center console out of uni-strut material that's what electricians use to
mount stuff...

My guess is that they are part of the OC fire system but not always
encrypted.
Maricopa county Sheriff in the Phoenix Az area went to an 856-869mhz
trunked system that is shared by all county agencies. much of the
traffic is clear.....you hear the dog pound or rabies/animal control,
flood control, roads, plus the sheriff.. ther is more to listen to..
plus you can hear phone patches....
problem is the data channels change one or more times a day, the data
channel is a buzz saw sound,just lock out those frequencies.
I have two aor-1000 scanners, and aor-8000, a regency mx-7000, a regency
HX-1000 plus a sony-2010 shortwave..... my truck has 4 antennas I often
have at least two scanners with me in the truck....
real time traffic info and real time news too
with the AOR radios, I can also listen to TV as well as broadcast AM and
FM stations and shortwave too
I even get the Mcdonalds drive through

: > I think I saw something about it on the back of the latest mailer....
:
:
: In my area (Denver) there were also radio and television commercials
stating
: that they weren't going to ask for that information anymore.
:
: With the exception of the first purchase at a Radio Shack after I move to
a
: new town, I've been giving them fake addresses for the past fifteen years;
: it'll be nice not to have to worry about coming up with a new name or
: address every time I go to buy the most obscure thing; there are only so
: many ways to keep a straight face and say "Yeah, sure, last name's
'Mehoff',
: first is 'Jack'," or, "Hunt, Mike Hunt"
:
: I asked the guys about the address thing the last time I was in and they
: agreed that getting rid of that policy was a good idea. They mentioned
that
: at some point in the past, the intent was to build a single, large,
: interconnected marketing database. It never happened.
:
: Sure, I bought an RCA DVD player there about two years ago, assorted
: scanners and CB radios over the years, but who gives a rat's ass about the
: $1.19 spool of solder or the $0.29 little stereo/mono phono connectors?
```

:
: Glad they won't be asking anymore. Now, if we could just get them to get
: rid of some of the cutsie little radio controlled toys and stock more,
well,
: RADIO SHACK stuff, I'd be happy.

I can't believe all this false name idiocy. I just told them "no." What are
they going to do, not sell me the stuff? Charge me more? Put me on their
black helicoptic list? Are Americans SO afraid of not following "the rules"?

27. Cordless Phone 3510 Khz FM

Group,

I just copied a local cordless phone on 3510 khz FM. It is 35dB over S9 on an Icom R-71A.

Anyone ever heard of this band used for phones? I was dialing up for ham traffic when this thing busted through.

After the party hangs up, the transmitter stays keyed for several minutes, unlike other phones that drop off right away.

How do you know it was a cordless ? Any chance it was
harmonics from a local AM BCB station just taking a call-in or such ?
In other words, RFI.

Interesting observation Jim. My Pro-2067 does fine on smaller trunked
systems but on
our huge state Moto II system it is not as fast at grabbing talkgroups as my
BC-780/785,
so I miss some calls when the system is busy.

It is possible that you are hearing the 2nd harmonic of an old 1.7 MHz cordless phone
base unit (the handsets are on 49 MHz). Look on 1.755 MHz +/- for the fundamental.
If it's not there, you might also be hearing the IF or an image from a 46/49 or 900 MHz
cordless phone that is very close to you.

The key to solving this is also use a receiver capable of 49 and 900 MHz to listen for
the handset side of the conversation. As I recall, the old 1.7 MHz cordless base units
stayed keyed briefly before dropping off.

One last possibility is you are hearing a high powered "export" cordless phone. I have
no idea what frequencies are used by some of these phones. I have a friend on Bequi
Island (St Vincent Islands) who uses one, but I think he said that one is VHF Hi band.

Let us know if you solve this!

Doubt it was a phone patch in the CW segment of the band. No voice modes
are allowed.
```

Hi, Tom. I've never heard of any manufacturer using that band for anything other than amateur radio transmissions. It's odd that the transmission would be in F.M. too. Like Reticulum said, perhaps it is a harmonic of a local radio station? Do you have a nearby radio station that broadcasts on 1170? Perhaps it is a third harmonic of that station, I don't know. In Tulsa, I can receive a local A.M. radio station on the second harmonic, but it is really weak.

That reminds me of something. Back in the late eighties, I remember tuning into the A.M. broadcast band, and I heard what really seemed to be a baby monitor. I cannot remember the exact frequency, but the loudest voice was of a baby, and the people in the background sounded weaker (which made me think it was a baby monitor). It was a continuous transmission that lasted for several months. Their house burned, so I never heard the transmissions again.

--Adam

I heard that these operate on frequencies in or near the air band, which is why they are banned from operation in the US by the FCC... Yup, looks that way...

Here are the copied specs from the following site:
http://www.cordlessmart.com/HT388.htm

General Items | Base Unit | Handset Unit
Frequency | 380~400MHz | 250~270MHz
Power Output | 10 Watt | 1.2 Watt

To compete with the BC-250D?

Are they going to make a drop in charger for
their new scanner?

It downloaded fine for me, you might try it again and wait awhile
for everything to download if you are using dialup.

43. FS: Active antenna 50-2000Mhz

Newsgroup: rec.radio.scanner
Date: 2003-03-01 22:03:01 UTC
From: Mike <coachmb@ameritech.net>
Message-ID: <p6a8a.538$3g.212020@newssrv26.news.prodigy.com>
Source record: 35558

I have for sale a Dressler ARA 2000 active antenna.

http://www.dressler.com/products/antenna
Specs
Frequency Range 50 - 2000 MHz
Gain 10 - 12.5 dB (Adjustable)
Noise figure 3.5 - 5.5 dB
Output impedance 50-75 Ohm
3rd order intercept point + 36 dBm
Dimensions 600mm high, 90mm diameter
Power requirement 12.5 VDC 120mA stabilized
about 50' of new RG58U coaxial cable.

This is a very good antenna for indoors or outdoors.
It takes up very little space.

The DC power adapter is for foreign voltage.
You will need to buy a 12V convertor from Radio Shack.

New $289. I am asking $150 plus $15 for shipping.

Let us not forget Uniden's UBC-895XLT (the predecessor to the 780).I'm
sure there should be some used 895's still being sold in the UK.The
trunking features in the 895 are top notch, considering the fact that
this was one of Uniden's first trunking scanners.

It's probably a harmonic from 1755KHZ. Try down there, it will probably
be even stronger. My neighbor's old cordless could be heard for MILES
(at least 7!) on a good day, at least a mile all the time. I wonder what
kind of power it put out?

BDK

>

The OLD cordless used the area just above the AM broadcast band. In FM.
1755+1755=3510, the neighbor's could be heard all over the SW band.

Is there a way to just scan a big chunk of frequencies? ###

I'm not familar with the BC60 but suspect it has a search mode in which you can
set upper and lower limits and scan between those two points. RM~

Where I used to live there was an old lady with a bad hip next door. Her
kids kept cordless monitors in all the rooms so she could always be heard from
any room in the house if she "fell out." I often used to listen on my AOR 8200
to her cooking in the kitchen with the Soaps on in the background while I
would fiddle with my Hamgear,etc. She always liked to hum while she cooked.
I moved and have not found a replacement. Alas !

I don't own one, but the user's manual:
http://www.uniden.com/pdf/BC60XLTom.pdf
doesn't show search provisions.

55. Is this suitable for scanning?

I'm interested mainly in scanning police frequencies (149-157MHZ...not currently trunk tracked) and was wondering how this radio stacks up? The price looks wonderful ($129) but will this actually scan the frequencies it lists or am I missing something? I mean it covers everything from shortwave to ham to 900MHZ and beyond.

If you only want to monitor the above,
I would suggest looking for something a little cheaper.
I see scanners that will do what you want going for 50 bucks on Ebay or Yahoo auctions.
Keep looking around and you'll find a good deal...

If anyone that owns or has owned one of these receivers could answer a few questions for me, I think I may order one of these very soon.

As I stated above, I'm not worried about TrunkTracking since I live in a fairly rural area. My main use will be to monitor local fire and police, but I am interested somewhat in SW (if I only get the main international broadcaster thats okay with me) and having an AM/FM radio. However my concern is this....

If I want to just save six channels per memory bank, will this radio do it for me? In other words...I want it to save police/fire in one bank and scan just those 6 channels. Is that possible? I currently have a BC60XLT, and I enjoy having just those 6 channels saved in memory. (My BC60XLT is about to give out and I would like to replace it before it does). Instead of spending $60-$70 on a radio that will only pickup fire/police, I'd like something that covers SW, AM/FM, 900MHZ and such. I think this is the radio for me, but I would like to be 100% sure on the memory function.

Thanks
Rob

Here's some info on a GRE-Radio Shack follow on digital scanner;
<http://www.strongsignals.net/access/news/news.cgi?type=single&section=radio&entry=987>

Other information has appeared over at Strongsignals.net about this
effort.
Just hope PL and DPL capability will be restored to this great line of
scanning receivers!

A drop in charger would be nice, however will settle for ability to
use AA's,
rather than a proprity drop-plug in battery pack.

To answer your question yes. I have the radio and it is nice but...
be forewarned, it is a bugger to learn to program. I have owned
yupiteru 9000, aor 8200, and alinco 2000 and this one gave me more
problems than those. But as far as the radio goes, I give it a strong
9 out of 10 and for the 135 delivered this is a bargain radio.

Rob,

The VR-120D can memorize up to 64 channels in each
of 10 banks.
I really enjoy the VR-120 and take it everywhere.

If you get a VR-120D, you are welcome to use
my free tk120 software. You can read about it
and download it from:

http://parnass.com

Suggest you join the Yahoo groups associated
with the VR-120 and VR-120D:

I use the tv dipole that comes with your tv set that everyone throws back in the box because they have cable. I have used this for at least 10 years. The dipole uses 300 ohm flatlead, so I bought a 300 ohm-to-75 ohm adapter and a female "f"-to-male bnc to connect to the scanner. If you need to extend the reach of the antenna, just add an "f" double female and a piece of 75 ohm tv coax.I got the idea from Grove Enterprises indoor 66" antenna. I use it on my PRO-2004 base unit, I've used it when I would take my hand-held out to the screened in patio. I think it works out great. I know it's illegal to do, but as a test when I first hooked it up, I checked the 49 MHz cordless phone frequencies. With the 18" or so stock whip antenna on the PRO-2004: nothing. With the tv dipole calls from all over the neighborhood would come in. My real boost was that I could start hearing ANG F16's out of Syracuse NY training out over Lake Ontario (I lived in SW Rochester NY at the time). And when the skip was running I was picking up 42 MHz CHIPs from California :) If you've got one kicking around try a tv dipole. Otherwise you can buy them at Radio Shack.

It's not always the content of the transmissions, it's the fact that you discovered it, have captured it, etc. Sort of like why some fishermen catch a fish only to release it afterward.

Ken

If you're looking for a simple antennna, then I could suggest the following
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=296&item=3010080882
I've recently bought one of these and even though it may seem that I paid
too much for it with the exchange and all, it's an awesome little antenna
and it's out of the way.

It's been actually pretty decent for me, and has picked up some good signals
from a good distance.

Usual confusion by the ranks of the snivel servants with the federal
gummint. Besides the new digital scanners are
expensive and unless your region uses APCO-25 (Vancouver uses Pro-Voice), in
a huge amount, there's no need
to spend the money.

I just bought a Uniden BC780XLT, and a BC245XLT off the counter at a radio
shop in Seattle.

As for licensing, no need for just scanning. Seems like alot of hoops to go
through just for scanning purposes.

Seems like Industry Canada is putting up a checkpoint where actually no
checkpoint is needed, since obviously the
scanners can only receive, not transmit. For transceivers I can see that,
but for scanners, it's a bit of a headscratcher.
Loks like they have intentionally made more work for CUPE members.

Save the money, buy an analogue scanner (or more ham gear) or use the money
to go to a Canadiens, Leafs, Senators, Oilers, Flames or Canucks home game
(if you live in Canadian NHL team towns).

What are a lot of shortwave stations doing around 286 Mhz as heard on
my Icom R2? E.g. VOA at 286.21 . Am I just hearing things or is this
some satellite rebroadcast etc.?

And I suppose you've heard of the digital-capable UBC-785DXLT that has been mada available in the States recently. It's basically a duplicate of the UBC-780XLT plus digital scanning capability. However, that digital scanning capability will come at a price. You'll have to install a D/A converter card into this thing and it's sold seperately and is about as pricey as the scanner is. Caveat emptor, the D/A converter is not capable of decrypting scrambled signals.

Well, let's see; the stock stereo antenna on the driver's side A-pillar, a 10m hamstick on a ball mount on the left fender, a 2m/70cm on an NMO mount dead center over the front interior light, and another dualbander on a magmount just ahead of the rear hatch for the scanner. Should I count the 10m dipoles and the 2m LPDA disassembled inside the hatch for field operation?

I'm thinking about adding another ball mount on the right fender for another HF monobander, and moving the scanner antenna to an NMO sometime in the not-too-distant future.

94. More Cordless Phone 3510 KHz FM, Found Source

Newsgroup: rec.radio.scanner
Date: 2003-03-02 23:33:33 UTC
From: courir26@yahoo.com
Message-ID: <a0dd5fc9.0303021533.57ffcce8@posting.google.com>
Source record: 35508

Guys:

It is not a local AM station (I think I could tell the difference). I hear a lady and a child taking personal calls about going to a Mardi Gras parade, same one my kid went to. Since the thing is key-down almost all the time, I also heard the answering machine pickup.

There is no primary signal on 1755, but the 3510 signal is still 35dB over S9.

I went down the block with a Sony portable and found the source about two blocks away.

I scanned around with a R-7000 and could not find the other side. Since we're off for Mardi Gras I'll keep looking for the other side.

If I was a CW guy I'd be frosted as she is locking up good ham frequencies.

Seems like it would take some power to be 35 over from two blocks away. The local AM 5000W is 30 over.

Source record: 35512

What is the IF? You could be hearing an image frequency. Most SW only receivers (500 kc to 30 MHz) have an IF will above 30 MHz. That way any internal mixes are out of band. ie 7.410 MHz + 70.00 MHz = 77.410 MHZ. If the RX had an IF of 10.7 you would have 7.410 + 10.7 = 18.110.

97. Alinco DJ-X10 memories wiped.

My X10 was in the drawer a bit too long and I had to reset the CPU to get it working again. As such, all the 'pre-loaded' memories with alpha tags were erased. Is there any way to restore them via a computer download. I know I could do a 'clone' with another unit, but I don't know anyone else in town with one.

Any suggestions?

Thanks,
Pat

98. BC780XLT discriminator and data slicer taps question

Newsgroup: rec.radio.scanner
Date: 2003-03-03 02:00:03 UTC
From: Vic <nospam@bogusaddress.com>
Message-ID: <syy8a.150285$KZ1.117977@fe04.atl2.webusenet.com>
Source record: 35513

I'd like to install the discriminator tap and BOTH data slicer taps on this scanner. That means THREE wires coming off the PC board.
Would it make any difference whether three RCA jacks were installed on the back of the scanner, or one 6 pin DIN socket?

I'd really like to go with the DIN socket and have all three taps there. It seems it would make for a simpler, cleaner setup. A
standard shielded PS2 mouse cord could be used for a cable from the socket. I guess I'm concerned that the receiver might pick up
interference somehow with a six foot cord connected to all three taps ... but I'm not SURE that would happen.

Any thoughts on this topic?

Vic

I only have two, one 5/8 wave 2 meter antenna and a glass mount scanner
antenna. 3 if you count the OEM AM/FM antenna.

I know of a ham in my area who has no less than 23 antennas mounted all over
his car. I'm not sure he even has that many radios in it...

One thing I've done is hook a length of coax to a set of TV rabbit ears.
You can probably find rabbit ear antennas at your local department store or
Radio Shack. You can lengthen or shorten them depending on the band of
interest. Just mount them vertically for a dipole.

Glad you found out what it was. Seems I remember Radio Shack coming out with those a while back. The ones I remember used the house's power lines as carrier current radio to connect the phone to the phone line.

Maybe a complaint to the FCC will solve the problem. Or better yet, maybe if you tell the lady that you can hear all her conversations she'll get rid of the device.

I am looking to swap my Uniden BC245XLT Trunk Tracker II, with manuals, box, battery, charger, etc. for a Radio Shack Pro92B or possibly Pro 2067. The battery has no been charged more than 20 times since new.

My 245 is in like new condition and I would expect your radio to be the same both cosmetically and electronically.

email direct to nmar@earthlink.net

I am not looking for any other trades,

Nick

I personally used a telescoping antenna off of the back of my Pro-2053 for a while and typically heard stations 40 miles away or more. Now I'm using a VHF/UHF discone at 15', and it works wonderful.

I have a pair of Pro46 handheld scanners for sale. They are fully capable of receiving the 800MHz spectrum.
Will ship anywhere in Canada/Continental US. I will also be attending the Rochester Hamvention in May. Cosmetically 9 out of 10, I will happily email photos to prospective buyers.
Price: $100US / $150CDN plus shipping & insurance.

Reason for selling: I have too many scanners, and just bought an AR8200, wife is threatening to leave... :)

Thanks!

Currently have 3. Very soon in the future will be adding at least one more
for my MURS radio, possibly 2...

1 - CB
1 - Broad-band Scanner
1 - AM/FM Broadcast
1 - MURS (coming soon)
1 - External Cell antenna (Maybe)

120. Audio filter for a scanner?

Newsgroup: rec.radio.scanner
Date: 2003-03-03 19:53:35 UTC
From: cprstn54zz@att.net
Message-ID: <3e63b196.190269843@news-server.optonline.net>

Does anyone sell a decent, low-draw (under 150 ma) fillter that could be used on the audio-out of a scanner? Analog or digital (DSP). Low pass, high pass and notch filtering seem fundamental, with random noise reduction a plus.

Ken

Naah, for me its the sheer entertainment of listening to really stupid
people ask really stupid questions:

"What comes on a cheeseburger?"
"Meat and cheese, pickles, onions, ketchup and mustard."
"That's it?"
"That's it."
"Can I get one with no mayo?"
"Yes because they don't come with mayo anyway."
"Why not?"
etc.

Hi,

IM looking for a handheld scanner that does108 to 138 and 225 to 400 MHz band.
It also most be able to search in 25 kHz increments and scan in AM mode.

If you happen to know the scan and search rate I would appreciate knowing this
too.

Thanks
John

Do you have a FM only scanner or is it multi-mode ? If FM there is not much
you can do at the audio level.

I'm surprised no one mentioned their wife!

Mine doesn't like any antennas on the car.

I only have one...the AM/FM antenna. Planning on 3 more in the near
future.

Sony ICF-SC1 or the PC version
25-1300 MHZ continuous, no gaps (if you are good with an xacto knife and soldering iron)
Steps are 5,10,12.5, 25,50,100 khz
AM , NFM or WFM
Search and scan rate at 25 steps per second
Normally available on eBay for about $125.00 US

Bob

Since the wife not liking antennas isn't likely to change, is that change
in antenna plans a hint that the wife is going to change soon? ;)

I would like to put an antenna in my attic. Although I be old enough to smoke, I must say I live at home with my parents. My ankle bracelet makes it impossible for me to leave the house to go up on the roof to run wiring, so the antenna will go in the attic.
The problem is, My mother does not want wires running from the ceiling to the basement where I live. Although she is a bitch , I must comply until she possibly she falls down the stairs.

So, I'm wondering if there exists some device which is a wireless antenna. I know there are wireless internet laptops because i stole a few haha. So what's the deal can I get wireless antenna access?

Heres a novel approach to your problem.
Get a job,get a life,get a house then you can rig the dam thing up from
one end to the other with wires.
For real dim wit it seems to me a radio must be physically hooked up to
an antenna to recieve,as an antenna has no output as such.
Sure I bet the CIA could pull it off,but its a pipe dream for the
average bozo like you.
Hell just hire one of your ex cell mates for a couple rocks to climb the
roof for ya.
Hope this helps.

Your best choices are the PRO-26, excellent MilAir scanner if you're looking for a used scanner. About the only thing I know of new would be the new Uniden BC250. I have 5 of the BC780's and they without question are the best MilAir scanner made, if the BC250 is anything like the 780's then that's the way to go.

George,

What makes the BC780 the best Milair scanner ?
By the way, I'm using a AOR8200MKII. Fell free to compare
as I like to learn.

This is indeed interesting. Here's a guy that has an ankle bracelet and
wants to have additional things given to him.

Makes me think of a recent series of events that led to two others getting a
nice ankle bracelet:

In my area, there were two guys street racing. Thing is they wiped out and
hit another car with a lady in it.
The judge sentenced both of them to conditional sentences, and ordered them
to be at home except for school,
church, going to the doctor.

The woman in the other car was killed instantly by the accident.

I thought someone here might know. I have a couple of old Motorola MDT 9100-10 units and I was wondering if they are good for anything other than cluttering up my garage. Can you just power them up and receive MDT transmissions? I'm not even sure I have all of the necessary parts to make a complete unit, I was just moving them around during clean up and wondered if they should hit the trash can or if I might actually do something interesting with them. (And save the lectures about legalities and such, I have no intention of answering calls on them.)

The one with the antenna in an all-weather balloon.

The antenna means a lot. I just ordered the ICOM IC-R5 as it
is supposedly one of the best of the compact units, and portability
is what matters for me. What fun is a unit you left at home ?

http://www.artscipub.com
Check this site out on how to build a "quickie antenna" for the ham bands.
It can be used for scanner reception, too.

I did and hooked it up to a Pro-34 and listened to the VHF aircraft and the
reception is pretty decent.
String it up in a nearby tree and you can sit in your car or in a tent if
camping out in the woods.

240-Robert.

I wasn't really expecting an explanation. It was simply what I read into
your comments - added to be humorous.

First you're compairing a Base scanner to a Handheld. However after
looking at the specs for the 8200 I wouldn't buy one if MilAir was my
primary interest. The main reason is the scan speed/search speed, the
ARO is only 37.5 steps/channels per second. For serious MilAir that's

not fast enough. The BC 780 is 100ch/sec. Here in Florida I'm scanning over 1000 frequencies broken up into 5 different BC 780's (shack photo: http://www.MilAirComms.com/shack.html). For speed's sake only each 780 is scanning 200 freqs. With MilAir most transmissions are very quick and if you're only sampling 200 frqes at 37/sec you'll miss a lot of comms if you're only sampling each freq every 5.4 seconds.

Thank you, George for replying. Those are good arguments.
At the time a handheld was my sole focus for scanning funds as most
of my radio money goes to Ham gear. The sampling rate has indeed
probably caused me to miss some comms. Otherwise, I'm very pleased
with the 8200 and glad I bought it. Now for my NEXT scanner,......

Andrew/ KG4JBM

PS I am curious; you're *scanning* a 1000, not *searching* a 1000 freqs.?
Based on web-based milair freq listings I don't think I could even get
to 300 in the DC area. Perhaps way less. Just curious.

Oh my god, if I lived in the DC area I would probably have 2000+!
Being in DC you have all the mil bases ATC freqs, you have each
squadrens operational freqs. You have R-4005/6 - Patuxent's Restricted
area which is very active. Not to mention you are well within receiving
distance from all of FACSFAC - Vacapes, VA GIANTKILLer frequencies, that
is just 15 frequencies for control and not counting Air-Air 138-144
comms. DC also sets on the border of NewYork Center and Washington
Center ATC sectors, between those two you have over 70 freqs that you
should monitor. You're also close enough to Cleveland Center that I
would have 50 of Cleveland Centers UHF freqs scanning away (there's just
120 ATC Center freqs within receiption range of DC). Not to mention all
the Baltimore/Washington/Dullas Class B Airspace ATC UHF freqs, without
looking I'm sure there's at least 20 more. Oh, almost forgot, another
15 or so freqs just for Combat Air Patrol missions...

To have everthing logically organzied in scanning banks so you didn't
miss anything and everythign was logically organzied I would use 15
scanners. Here in Florida I usually have 9 scanners on at a time, some
of them scanning duplicate sets of freqs, again to avoid "misses".

I use to live in Pennsylvania (Lancaster, PA) and had always would rent
a summer house in Ocean City, MD and driver down 3-4 days per week. I
would always have a PRO-2035 in my pickup with about 300 freqs
programmed in. And always had something to listen to and that was just
with a mobile antenna.... DC and the Eastern Shore is really a "Target
Rich Environment".

It all comes down to "what do you want to listen to in this fine hobby
of scanning"... Theres something for everyone.

188. Trunked and Regular in same bank on BC250D

Newsgroup: rec.radio.scanner
Date: 2003-03-06 02:55:05 UTC
From: Dustbunny <barfco@swill.com>
Message-ID: <rpdd6vg88u35juan4sj4enoed9lrvaiaj1@4ax.com>
Source record: 35453

The manual says this is possible, but it's unclear to me how you go about setting it up. Do you need to set the trunked frequencies at the beginning of the bank, and then the normal channels?

What I'm trying to do is create a single bank containing the trunked ARINC chatter and the normal aircraft and tower stuff.

Any guidance will be much appreciated.

Please respond here, addy is bogus to reduce spam.

Thanks

Very nice condition with little use. Just wanting to use the $$$ to get a shortwave radio. Includes original box, manual, antenna, & a AC/Wall Adapter I picked up recently.

The scanner is a very early unit (from the BC-2500 family) and has a Uniden issued problem where the battery drains very slowly even when the unit is turned off. This can be remedied by removing the pack from the scanner when not in use for long periods of time. I heard this can be fixed by Uniden or by oneself with some wiring experience. Works great when used in shack setting, in a dedicated position.

This scanner covers these bands completely:

25-550, 760-1300

Please e-mail me with your offer price. I take best offer.

Optoelectronics makes an board you can install last I recall Aprox $150 Then try Probe or Scanstar for software another 80-140$ or so. Should make a great project.

You might check out these guys. I don't know much about this company, but it's a start. You might also check out companies like www.aesham.com or www.hamradio.com Though, I don't know whether or not there prices will be as cheap as Universal's.

http://www.bearcat1.com/item0005.htm is $332 + $9 shipping, is the cheapest place I have seen them so far (except for Universal Radio).

I just looked on Universal-Radio's website, and they said the 250D scanners were "in stock for immediate delivery." I guess they are a bit behind, haha.

195. Good prices indeed.

That's a nasty statement. (Though I wouldn't expect better from a NO
CODE TECH like yourself.)

This scam was very tricky. I can see how people get duped. You get an
email with a return address of "info@paypal.com". Yes, that's right. A
valid PAYPAL return address.

You don't get redirected to a web page, your browser displays a form.
If you are naive (notice I didn't say "stupid") or uninformed enough
to press the submit button, the thief will get your info.

It's a shame the FCC has lowered its standards and let mean spirited
people like you get licences.

I left Amateur radio when NO CODE TECHs like you took over.

I get a "no scanner detected" message when I try to connect. I have tried several software apps and 2 serial cables, same problem. The baud rate is correct (19200), there are no conflicts with my hardware and the scanner is in Remote mode. This problem has occurred every time I have tried to connect since the unit was new, but I guess it's possible that the unit has a problem? Any ideas?

That was my read as well, despite the Bill Cheek debacle.

I have however been unable to locate any software on the web to do the decoding. I know it exists, but all the links to it are severed. At the time it was available, my town had no MDT service. Now that they do, I have no software.

Hopefully someone will take pity and e-mail me a copy. I want to use it with my soundcard. If necessary, I can build a signal slicer and feed the serial port.

Why not just pick up an old Motorola radio from a police auction or scrounge one up on ebay and hook the thing up the way it was intended to be used? No need for a PC or software then. I'm pretty sure you could also use a scanner as the radio and feed that signal to the MDT. You obviously wouldn't be able to transmit but I think it could me made to receive (unless the decoding is done in the radio and not the MDT).

Hi. What do you mean by $100 over? Do you mean the one at
National-Electronics is $100 over the price at Universal? The price I see
at National, is $339 for the BC250D, and also $339 for the BC785D. Ugh, I
think Universal-radio must have gone up on their prices on the BC250D from
last night. The BC250D is now $369.

>That's a nasty statement. (Though I wouldn't expect better from a NO
>CODE TECH like yourself.)

What does my ham radio license have to do with being nasty? BTW - The FCC eliminated the different "Tech" class licenses back in April 2000. There is now just the "Technician class".

>You don't get redirected to a web page, your browser displays a form.

Again, anyone that has used the internet for more than a day should know that services such as PayPal, AOL, Ebay, etc... do not email you to ask you to supply information. When you log onto these systems, they will ask for the updated information. AOL has implimented a unique email system where if you receive an official email from AOL, it appears different from all the other email.

>If you are naive (notice I didn't say "stupid") or uninformed enough
>to press the submit button, the thief will get your info.

That's what I said.

Yup, you can do it exactly as you described. You just turn trunking on (menu+2+2), select your trunk type, then enter your freqs under the "trunk channel" menu option.

Then pop out of that mode for the non trunked stuff.

If you havn't checked it yet, make sure the serial cable is a "straight" cable with pin 2 and 3 routed straight thru and not at "null-modem" cable where pins 2 and 3 (TD & RD) are crossed.

See:
http://www.taltech.com/TALtech_web/support/pins.html

And under which OS are you trying to connect to the scanner?
I've bad experiences with Windows XP and High speed PC's
Better use win 98 and an older pentium 1.

good luck,

JBO

Thanks, I hope it's that simple. I have tried 2 serial
cables, but both from the same source so they could both be
null-modem cables.

229. Uniden scanners and air comms

Newsgroup: rec.radio.scanner
Date: 2003-03-06 20:08:46 UTC
From: "Povl H. Pedersen" <povlhp@povl-h-pedersens-computer.local>
Message-ID: <slrnb6famd.2ij.povlhp@povl-h-pedersens-computer.local>
Source record: 35494

As far as I can see the Uniden scanners supports only stepsizes
of 5, 12.5 and 50KHz (at least it seems to be so here in Europe)

Does that mean there are lots of frequencies they will not
be able to receive compared to the ICOM IC-R5, which will
do
5, 6.25, 8.33, 9, 10, 12.5, 15, 20, 25, 30 , 50, 100 KHz ?

I know that 5, 12.5 and 50 also means it will tune frequencies
that is a multipla of 10, 15, 20, 25, 30 and 100

But the frequencies 6.25, 8.33 or 9 KHz spaced will be a
problem for Uniden as far as I see ???

I'll also go with an obvious one. Being a systems analyst I have found on
occaision that the obvious thing resolves a
big problem.

Be sure the software is set to either COM1 or COM2 as most computers have
two COM ports. I use COM1 for my BC780XLT and COM2 for my BC245XLT. Had it
hooked in in no time.

As the others have said a Null Modem cable will not work, you'll need a
standard 9 Pin cable available at any computer
store.

Not weird at all. Radio Shack has been selling Uniden manufactured scanners, with the Radio Shack name on them, for years. Besides, until they get their GRE to market, they want to cash in on the action.

While the radio is on, press the "slct" button. Enter the first number (in your case 136 then E) then enter the second number (ie. 137 then E). After that is entered, press "srch"

Hope that helps.

Why? It's retail. Can't compete? Sell what the competition sells.
Even if/when they get their own, carrying both will gain many otherwise
lost sales. If the the buyer likes the GRE unit better, Radio Shack
wins. The customer likes the Uniden better? They win again.

The bike shop I work at used to get a lot of customers asking for a
particular brand of bike that we didn't carry. What did we do? We
brought in the other brand.

Bud -

I've been giving serious thought to this very idea.

In theory, it would be possible to connect the digital card to a 780 if you knew the pinouts. Before the digital scanner came to pass a partner of mine and I tried to retrofit a 895 with a card we talked DVSI into letting us "borrow" for a time.... it didn't work because the 895 did not allow us to select FM mode instead of NFM (plus we didn't know that would have an effect anyway) and DVSI gave literally no assistance in hooking it up. Just a cryptic document that gave the pinouts of that particular board (it was much larger than the current digital card, hence the reason we went with the 895 for a test bed - lotsa roooooom).

The only rub is there's no way on the 780 to adjust the sound settings... but if you hooked the right pins up to the right places... voila.

Too bad Bill is gone - if anyone could have figured that one out it would've been Bill.

Thanks to all who offered suggestions, I finally got it working. It was the cable. I didn't think it was the cable because I had tried 2 different cables. So I took the scanner to work and tried a 3rd cable, still not working. I tried a 4th cable and it worked fine. Took it home with cable #4 and everything works great. I have a pile of old serial cables at work and this is where I was getting the cables. All of the cables are good but aparent'y a bunch of them are "null modem" cables.

A few questions about European Uniden scanners.

The US BC-780XLT has lousy 800 MHz receive sensitivity, because not only do they have to block the cellular range, they are required to supress cellular "images". The filtering required to do this seriously degrades the receiver's performance.

Does the UBC version use the same RF board as the BC, with the filtering, or can you get away from the problem by buying a UBC?

Any word if a UBC-785XLT is in the works?

>Anyone have one for sale??

Mine works great for catching voice or data streams. Too slow to
catch data bursts. I use it with an AR3000A.

Once I'm able to find an Avcom SDM-42A for a reasonable price, I'll be
putting my SDU-5000 up for sale. But that may take a while.

Come on Sir, is this sort of nonsense necessary?

Speaking as a newcomer to ham radio, as I have only been licensed just over 50 years, I think not .

I think that anyone who has fulfilled the requirements of the FCC is every bit as much a ham as those of us who walked to school and back, up hill both ways, in the snow.

A person today has no choice but to accept the regs as they are, regardless if you, I, or my aunt Minny did it differently.

Me personally, I have never got over the fact we no longer hear the arc of a 3B24 or the singing of a loose modulation transformer. When my eyesight was perfect, I got to solder a wire to the socket of an 80 rectifier I could see twenty feet away. Now that I have to out on one pair of glasses to find the other they have all this SMT stuff.
I guess the world just isn't fair to any of us!

Welcome one and all to amateur radio, a bunch of great folks and one old curmudgeon. And I intend to hold the title until I am a SK.

Well, with all the antennas I do not go in parking structures unlerss
they have a guaranteed 9 ft clearance.
most urban garages are 6 or a max of 8 feet. the garage at my house I
built is 12 foot tall the truck fits under there fine sometimes every
antanna is connected to a radio.. other times, I select the antenna with
the best band performance to what I am most interested in. the 10m/2m
antenna or CB can be patched to the scanner and give good shortwave
performance. this lets me listen to international broadcasts on the open
road....

I'm planning on getting an XM system and a GPS soon.. both these
antennas are low profile in that they only stick up about 2 inches max.

The facility that installed my antennas in San mateo did an excellent
job..... My brother has an antenna on his pickup and complains that it
leaks when he washes his truck or when it rains.

never a problem with a scanner (I usually hav 2 hand helds) in the US
but did have a problem at Stuttgart in Germany... though interestingly
enough not at Frankfurt which is a busier airport......

I was on An AmericaWest plane and it was like keystone cops.. we were
inside the plane but no one outside could figure out who was going to
fuel or load the plane.... the battereis on one scanner died, so I
switched to the other..... I kept the other passengers informed on
what was going on....

often on US flights I can listen to the scanner without much problem

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi, I just got my Pro-95 the other day. When I use the CB search bank with the squelch turned all the way down, sometimes the audio will blank as if the squelch is turned up. This only happens when an antenna is on, excluding the supplied antenna. When I use one of my outdoor ham radio antennas, the problem is solved by moving the coax around a bit. Note that it will work fine when entering the frequency of the CB channel into "Tune" mode.

TIA

Message-ID: <b4atuf$l92$1@knossos.btinternet.com>
Source record: 35394
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I had the same trouble.
My modem was on COM1 so I tryed to use COM2 for my 780.
The COM2 socket was 25pin on the PC so I used a 25-9 converter that was
lying around (free with an old mouse?).
I then used a 9pin-9pin serial but couldn't get things to work....
it turned out to be the converter.
I replaced the 25 pin socket with a 9 pin straight into the motherboard and
it was fine..
good luck.

tk2 relies on an older version of Tcl/Tk than tk92 does.
But, the fix is simple if you installed tk92 before tk2.

Change the last line in the file C:\tk2\tk2.bat from this:

"C:\tcl\bin\wish83.exe" "C:\tk2\tk2.tcl"

to this:

"C:\tcl\bin\wish.exe" "C:\tk2\tk2.tcl"

Try www.steaksandwich.com and check out Wintone for recording your
scanner through your soundcard. It is shareware and only records when
the squelch is open.

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-1R, FT-50-R, VX-10, VX-150, VX-110,
VXA-100, VXA-120
Icom: IC-T90A, IC-T8A, IC-T81A, IC-Q7A, IC-R2, IC-R5
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)

Message-ID: <b4b9hlrij1@bob.news.rcn.net>
Source record: 35303

On certain frequencies that I have stored in my scanner for my local area, there is a lot of static making it hard to hear the audio. In some cases I am only 1-3 miles from the transmitting source. In other cases, I am closer than a mile from the transmitting source. In situations like these, why is the audio not clear? Is there something wrong with the scanner?

Have you ever had a pro-95? Simple to operate,simple to program. And best of all there is a neat free program Win95 that allows you to setup the frequencies, labels, etc and upload to your scanner.

You can mix trunked and standard frequencies and scan them all.
I had a pro-2050 that was much more difficult.

Hmm, I would have to say the RS radios are a little EASIER to
use/program then the Unidens, but it's not all that big a deal.

Definitely a base. Want to listen to regular stuff and whatever
is good. Want to receive cordless phones, FRS, police and fire. Cell
phones would be nice but I'm not sure how busy that band is any more.

>and maintain.

To be honest with you, I have always used the computer to program them. I
wouldn't attempt it any other way. My 2m mobile and my triband HT are the same,
all programmed by computer. You can't beat it.

>Definitely a base. Want to listen to regular stuff and whatever
>is good. Want to receive cordless phones, FRS, police and fire. Cell
>phones would be nice but I'm not sure how busy that band is any more.

In a nutshell, there's no ONE specific scanner that you'd want. There are many older base units available, especially if you look on Ebay. You need to know if any frequencies he will listen to are above the 500 mhz range. If so, you have to make sure it's a little more modern. I'm assuming he won't be listening to any trunked systems, so that'll keep the price cheaper. If he doesn't have to listen to anything in the 800mhz range, the scanner will be even cheaper. As far as cell phones go, depending on where you're at, you might hear some Analog stuff, but it's been illegal to manufacture scanners capable of listening to cell phones since 1996, so chances are you won't find a pre-1996 scanner with that capability.

Do a search on ebay for "base scanner" and see what comes up. After you get model numbers, do a search on deja.com for past posts about the scanner you are considering to see if there's any negative or positive comments on it. Then, search on Yahoo.com for the scanner and again see what you find positive/negative. Lastly, post the list of scanners you found here on the newsgroup and I am sure you'll find people that have used that version before.

I hope that helps!

Message-ID: <lnfk6v8ne6ql4apejn5uc7i964hql50o2m@4ax.com>
Source record: 35325

Looking to trade my dual band public safety HT, Yaesu FTH-2070, with high capacity battery, and rapid charger, (no key pad) and/or my EF Johnson "Scorpion" 16 channel UHF HT with 2 extra batteries and rapid charger for your SMALL 16 + channel 5 watt VHF (150-160 MHz) HT.

My equipment is in very good physical and working condition. I want a smaller and lighter radio for volunteer fire and EMS work. Would prefer one that is keyboard programmable or with supplied software and cable. . Radio MUST be FCC type accepted for fire and public safety use (no modified 2 meter HT's - already have one and the department won't allow me to use it) and be in excellent condition with rapid charger.

Several other radios and Vol. Fire/EMS lights listed at:
http://www.angelfire.com/in4/jnk47130
are also available. Make me an offer.

Can e-mail pictures if wanted. Questions or offers to:
w8ems@juno.com

The closest FM radio station is located in a town 16 miles away.

I never really got into CB, I just went straight from scanner monitoring to ham radio. Could this be caused by illegal CB activity from nearby? There are CB users within walking distance from my house.

Any other ideas?

318. Yaesu/Vertex FTH-2070 Review?

I've been using one of these for the past six months for Volunteer Fire and EMS work. In fact, I have it listed for sale/trade on some of the News Groups.

The following page gives a lot of information on this radio:
http://mmi-comm.tripod.com/fth2070.html

The one I have was programmed in the ham bands when I bought it and it seemed to a good job. I could hit just about every repeater, both 2 meter and 440, that it was programmed for.

It is now programmed on our VHF fire and EMS channels as well as the UHF Med channels. I use the radio just north of Louisville, KY and have had no problems with operation in a congested RF environment.

My negative comments on this radio are it's size and weight. With the high capacity battery, this thing is a pain to carry around for 8 to 12 hours. However, for Public Safety use, it's built like a tank and provides dual band capability. Much better than trying to carry two radios.

I have two of them and they both do it. Never gave it a lot of thought, I have an FM radio station up the street that desenses certain frequencies and off handedly attributed it to that.

Now that my curiosity is aroused I will pursue it further and let you know what I find out.

I had just passed through luggage check. That always makes me nervous, so I sat down in the smoking area and struck a match on my shoe.
Actually, I had to strike the match 4 times before I got it lit. When I stood up, a big white cloud of my diet supplement powder began emanating from my pants.
A guy in a uniform was looking at me down the barrel a vacuum cleaner tube, and he told me not to move. I don't want no stinking janitor to vacuum me so I pushed it aside.
I heard this loud buzzing alarm go off so I ran to the nearest gate to see what was going on. People were leaving the area quickly, so I went onto the plane to help those in need.
I yelled at the passengers and crew not to panic, be quiet and everything will be fine. I told them that it would probably be a good idea if we backed the plane away from the terminal just to be safe. They all agreed.
As the plane began to move down the runway, I noticed some helicopters right above the plane. I told the pilot to get this damn plane out of the way so the helicopters would have room to land.
To my surprise, the plane actually took off, and a passenger opened the door and two people jumped right out onto the runway. I couldn't believe it. I told the passengers that I hope for their sake no one else tries a stunt like that.

Once in the air we saw three military jets flying beside us. One of the pilots pulled out a bullhorn and was shouting Pull Over Emilio. He kept pointing toward the ground. I think it was Aloha Airlines and they were playing one of their infamous practical jokes.

Next thing I knew I the plane took a wild turn and the passengers jumped on top of each other. I found myself near the bottom of the pile. Since I had injured my leg, many of the passengers held me down so I would not be bounced around in the turbulence. We landed, and as we exited the plane there were hundreds of cameras and microphones and reporters on the tarmac. I felt like the Beatles. Everyone was yelling out hero, hero. Personally, I did not feel much like a hero. I'm just an ordinary guy and I just tried to do, well... what was right. I honestly just kept thinking about how that stewardess was going to be my future wife and how she and the kids would have to get along without me if we perished. That gave me strength. I waved to the crowd with my hands tied to the stretcher. There is a guard outside my door keeping the press away right now.

Source record: 35341

Reported by chris451.
Location is Cedar Rapids, Iowa but I have heard systems like this in southern and centeral MN.
A type 1/2 hybrid trunk 800 system had one control channel and 4 talk channels. Now all 5 channels in the system are keyed up all the time with subaudio control and a 900 Hz tone in the interval:
9.2 secs off 0.3 secs on
DPL or subaudio control is present all the time.
When someone uses the system the voice comes up on one of the channels.
Another county away, there is another set of 3 rather than 5 channels with the same thing on it.
And in the north counties of ia there are just single freqs with the DPL only no tone.
The user is alliant energy and a subsidary interstate power and light co, who had a patchwork of different motorola 800 sites scattered all over the place to allow them to cover the huge areas they must maintain. IF you want the audio sample email me at hotmail.
I dont think the bc250 can track this. And the continuous carriers with tones get old after awhile, maybe its their way of keeping nextel off their freqs.
Nextel should move to 700 meg instead of trying to bury 800 meg.

You can use my free tk8500 software for the IC-R8500.
See Monitoring Times (April 2002) and the British SWL Magazine
(November 2002). tk8500 permits scanning multiple channel banks.

You can read about tk8500 and download it from http://parnass.com

Why are some public agencies moving to digital? You can encrypt analog, so that must not be it. Is the FCC pushing this to get bandwidth back to auction off like they want to do with analog TV frequencies? Voice quality on digital seems inferior (much like digital cell phones, but that's another story). And there is a huge investment in time and money to get a digital system operational to replace a perfectly fine analog system.

So, what gives? Why are agencies going this route? Are they being sold a bill of goods by communications companies, or what?

I turned on the scanner at 1:30 last night (you won't get anything there
then) and went into the CB search bank and had no problems. It seems
strange that it only does this in the preset CB search bank and not Tune
mode.

I am using a Radio Shack trunktracker hand held scanner. I am a little hard of hearing and would like to make the output a little louder. I have attached a small speaker to the output from the earphone outlet on the scanner and that helps some, but I would still like it a little louder. Is there some kind of small amplifier/preamplifier that I could buy and put in between the scanner and the speaker or what would you suggest? Thank you very much for your help,

Hi,

I have used an amplified PC-Speaker. But you get also amplified speaker
that only work in the frequency of human voice. You should get it in any
good electronic shop. I got mine in Germany from a company called
"Conrad". You may want to look there as well (but I don't know if they
have an english website as well).

Cheers,
Goetz

Any amplified speaker of the type used on computers would work well for this. Usually these are stereo (the first speaker has the amplifier, the other is just a passive speaker that plugs into the first speaker), but you would only need the one with the power cord that the audio plugs into. Just run the audio cable from the headphone jack on the scanner into the speaker...this cable is almost always provided with the speaker. There are some battery-operated amplified speakers available as well. Just go to Radio Shack and ask for "portable amplified speakers" or "amplified speakers for a computer". You will have no problem at all finding these as they are quite common. Look for ones with larger speakers and at least 1 or 2 watts output power for best results.

Interesting. I know where I live (Indiana) the police set up a new
wiz bang digital system that lasted about a week before they reverted
to their old analog one. They were getting dropped all the time.
Eventually, the communications company determined that they needed a
new antenna in a different location to cover some gaps in the area.
They are getting ready to switch back over to it in a few weeks to see
if it's better now or not. I will be curious to see the results.

Talk to you later...

Dr. Fred Hambrecht Sr <<v6ebvclhlgcdf0@corp.supernews.com>...

^ I have however been unable to locate any software on the web ...

The program is MDTMON[.EXE|.ZIP]. It's available somewhere; I downloaded it about two weeks ago. I'd mail you a copy but I no longer have the archive. When I download an archive I typically install the software then delete the archive, so all I have remaining is the installed programs, drivers, and etceteras.

If you're trying to read transmissions to EDACS terminals then this won't do it. From what I've been able to glean so far it appears that EDACS uses a Windows NT network and the remote Mobile Data Computer (MDC) is a node on the net. The radio serves as the network interface. These transmissions can still be decoded and read but it doesn't appear that anyone's done it yet.

^ That software was removed from the web ...

Are you a cop? If so you're a bad cop. You're deceitful and dishonest. This is why we need to monitor our police, to protect ourselves from cops like you. We can't have a secret police.

Regarding the interception of data transmissions there is plenty of precedence to justify it. People have been intercepting weather facsimile (FAX) transmissions for many years. Radio teletype transmissions can be and are intercepted and decoded. Every Morse code transmission can be intercepted and mentally decoded legally by anyone who wishes to. You can legally intercept everything the US military does, though much of it is encrypted and will be useless.

There are times when a cop needs to transmit confidential information and this should be permitted, but not everything a cop says on the radio should be confidential. If you need to send confidential information, encrypt it. The US military has been doing this for almost 100 years. But "encoding" is not "encrypting". Morse code is a form of encoding.

Frank

You need a trunking scanner for this. The 800mhz freqs are entered
into the bank and the scanner set for trunk tracking. The other
numbers are what you'll see on your screen and represent the
individual 'talk groups' Read up on trunking here

http://www.valcoelectronics.com/Tips/trunk.htm

Good luck

I really like mine. I had a Yaesu VX-5 before and prefer the
Kenwood. I wanted the SSB receive capability but really find the
main advantage to be the easy to use menu/command system. It is
much much more intuitive and easier to use than the Yaesu's.

365. Uniden 785 Drowning in Intermod

Newsgroup: rec.radio.scanner
Date: 2003-03-10 03:51:33 UTC
From: Anonymous@anonymous.net
Message-ID: <v6o32s66l71l65@corp.supernews.com>
Source record: 35281

I just purchased a 785D by Uniden. Excellent radio, even the programming (the level that I need to do, attenuation, CTCSS, etc, I don't need the trunk tracking yet) is fairly straightforward once you get the hang of it.

Now to the Intermod. I have the Alinco DJ-X10T, the Yaesu VR-500, the Yaesu VX-5R. All of these radios suffer intermod, apparently I live in radio alley.

The methods that have proven beneficial in overcoming this with the other radios are as follows. The Yaesu VR-500, use attenuation and squelch max. The Yaesu VX-5R, use CTCSS, and bought a miniature antenna to attempt to attenuate signal, no attenuation is offered on this radio. The Alinco DJ-X10T, Attenuation as needed, Squelch max.

In order for me to use the 785D, I need to attenuate as needed, and I use CTCSS or max squelch as needed. I get Intermod from the 152 MHz Pager Systems, and interference from a local TV station, either VHF channel 13 or UHF channel 16. Unfortunately they are PBS and co-owned. They often simultaneously play the same show. I need to listen to the interference and watch the channels to discover which is the offender. The police frequencies I listen to are in the 453 to 458 MHz range.

I had hoped for better with the 785D, but my other radios are also blitzed by the intermod, so I'm not totally without hope yet. I took the Yaesu VX-5R and used the VFO setting, listening to one police frequency (that the 785D is having more problems with), and had the squelch set low. All went well for a while, then BLAM, something completely obliterated the VX-5R reception, lasting only a second or two. Perhaps a complex Intermod, since the 152 MHz pager signals are just about endless during the day, but the problem as described in this paragraph occurs only about once every 5 minutes. There are transmission towers (a pair of them) probably within a mile by air, and a cell tower within a quarter mile.

No matter how much I try, the 785 Intermod either blitzes the tail end of transmissions ended by the loss of the CTCSS tone, or can be heard as interference as the transmission is in progress.

I can actually listen to many of the police signals that I monitor without any antenna. In an attempt to further attenuate (beyond the abilities of the 785 Attenuation circuits) the incoming signal (over the telescoping antenna supplied by Uniden), was to purchase the following Antenna Stub from Radio Shack. All is well using this, I can hear all of the channels that I routinely monitor, though I still need to attenuate some and run the squelch high.
http://www.radioshack.com/searchsku.asp?find=20-288

Anyone with similar experiences? I intend on buying the PAR filter for 152 MHz pager interference. Someone mentioned that custom filters are available from

PAR, where can these be bought (I need to notch the Channel 13 or 16
Television Interference).

The 785D is a very nice radio, I just hope to get a little more use out of it.
I wanted to use my outdoor antenna, but at this point I dare not.

Many thanks.

One big reason is that they are almost interference free. The average Joe can't just pickup a $100.00 ham HT and jam the police like on the old analogue system. The radio dispatch center also has more control over the radio and can shut down one radio if it gets misplaced or stolen. The radio sends data like the built-in GPS so when the officer gets into a foot chase he doesn't have to call out cross streets and locations it is sent automatically to a map at dispatch. I have also found that the audio quality is 100 times better then analogue. One point to note, GE, (the owner of the Erickson system) has dropped the digital system and is no longer producing it. This will leave many police systems in the lurch for compatible equipment.

368. Antenna for the office

Newsgroup: rec.radio.scanner
Date: 2003-03-10 09:08:08 UTC

I want to purchase/build an antenna to use in my office scanner. I'm on the first floor of my building. I'd prefer something that Radio Shack carries or I can build myself, as my BC250D came without an antenna (it won't arrive for a while I'm betting). I mostly need 800 mhz trunking. (~860 mhz) Infact that alone would be enough for me. There is a real ham store, but I don't want to deal with the crummy Seattle traffic to get to HamMall or ABC Communications. If they have something that would be "perfect" for a reasonable price, then I'll go for it.

The only other things I am interested in (having these would be nice, but not a deal breaker):
150-158 mhz
~450 mhz (more important than 150)

Thompson

Bud.... I currently work for a police dept here in southeast Michigan. Were not on a digital system as of yet, (still prehistoric on VHF), but we've been using a single channel, analog 800 mhz MDT system. Its served our purpose up until now, but its time to upgrade. We need to consider going digital, in order to get the higher baud rate. That way, it will allow us to send bigger bulks of data (bad guy photos, field reports, etc). Can't do it with the current system.

The custom filters can be bought through Grove Enterprises and other hobby vendors.

The custom filters are handled direct from PAR. Here's their web site: http://www.parelectronics.com/filters.html

The current issue of Monitoring Times has an article where the author describes daisy-chaining filters in a project box to address multiple intermod offenders. He also added an amp in-line.

373. FCC Issues Narrowband Mandate Below 512 MHz

Newsgroup: rec.radio.scanner
Date: 2003-03-10 14:04:34 UTC
From: Bay leaf <bay3leaves3@yahoo.com>
Message-ID: <3e6c9b9d@snipnews.snip.net>
Source record: 35289

FCC Issues Narrowband Mandate Below 512 MHz

http://www.apco911.org/frequency/narrowbandmandate.htm

DAYTONA BEACH, Fla. (Feb. 25) The Federal Communications Commission (FCC) finally issued a long-awaited ruling regarding narrowband applications. The Second Report and Order and Second Further Notice of Proposed Rule Making under Docket 99-87, FCC document number 03-34, was adopted on Feb. 12 and released on Feb. 25. Public safety will have until Jan. 1, 2018, (for existing systems) to migrate to 12.5 kHz technology. Business users of spectrum below 512 MHz have a migration deadline of Jan. 1, 2013.

More urgently, new applications for frequencies below 512 MHz for bandwidths above 12.5 kHz will not be accepted six months after publication in the Federal Register. The following is an excerpt from paragraph 12: 12.

"Specifically, our amended rules will:

beginning six months after publication of this 2nd R&O in the Federal Register, prohibit any applications for new operations using 25 kHz channels, for any system operating in the 150-174 MHz or 421-512 MHz bands;

beginning six months after publication of this 2nd R&O in the Federal Register, allow incumbent 25 kHz Part 90 licensees in the 150-174 MHz and 421-512 MHz bands to make modifications to their systems, provided their respective authorized interference contours are not expanded as a result thereof;

beginning Jan. 1, 2005, prohibit the certification of any equipment capable of operating at one voice path per 25 kHz of spectrum, i.e., multi-mode equipment that includes a 25 kHz mode;

beginning Jan. 1, 2008, prohibit the manufacture and importation of any 25 kHz equipment (including multi-mode equipment that can operate on a 25 kHz bandwidth);

beginning Jan. 1, 2013, require non-public safety licensees using channels in these bands to deploy technology that achieves the equivalent of one voice path per 12.5 kHz of spectrum;

beginning Jan. 1, 2018, require public safety licensees using channels in these bands to deploy technology that achieves the equivalent of one voice path per 12.5 kHz of spectrum."

The FCC also expanded on the equipment-type certification for manufacturers. After Jan. 1, 2005, the FCC will prohibit the certification of new equipment that includes a 25 kHz mode. Equipment certified on previous dates will continue to be available, allowing system users to amortize their investment

in existing wideband equipment.

The FCC gave public safety an additional five years beyond the migration mandate for business users, recognizing the difficulty in obtaining funding and conversion for the public sector.

The move to prevent licensing of new systems or expansion of coverage for modifying existing systems starting in six months will have a major impact on public safety and public safety coordinators. The FCC believes continuing to accept new wideband applications would result in continued and expanded proliferation of wideband technologies counter to their intent. Additions to existing systems, additional frequencies, or new sites will be limited to operation within the interference contour of the existing system. No expansion of coverage area will be allowed using an excess of 12.5 kHz bandwidth.

Note: APCO had proposed a 10-year migration period with a five-year extension for designated rural areas. The FCC dismissed the proposal.

For more information, contact APCO AFC at (386) 322-2500 or visit our website at www.apcoafc.org. Automated Frequency Coordination, Inc. is a wholly owned, not-for-profit 503(c)(3) subsidiary of APCO International, Inc., located at 351 N. Williamson Blvd., Daytona Beach, FL 32114.

About APCO International: APCO International is the oldest and largest public safety communications organization in the world and is the only association that handles the entire operational scope of emergency communications. APCO's 16,000 members represent public safety agencies in all 50 states and the District of Columbia, as well as U.S. territories and 34 other countries. I had this exact problem only I'm running four radios through a Stridesburg multicoupler. A new paging company came to town and was all over the band, they must be very close. And I have yet to figure out where. But anyway I put a PAR 152 filter in front of the multicoupler and it worked perfect. All interference on all four radios gone without any signl loss that I can determin.

375. Great Handheld Scanner FA

Newsgroup: rec.radio.scanner
Date: 2003-03-10 14:24:04 UTC
From: rljames <me@home.org>
Message-ID: <3e6ca215$1@news.netacc.net>
Source record: 35292

Yupiteru MVT-7100 with No Reserve.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=296&item=3011821640&rd=1

Especially excels at shortwave which could get interesting if things heat up with Iraq.

376. FS: AOR AR8000 *excellent*

Newsgroup: rec.radio.scanner
Date: 2003-03-10 14:24:43 UTC
From: Vic <bogus@nospam.com>
Message-ID: <ad1ba.63656$B66.5378@fe08.atl2.webusenet.com>
Source record: 35291

Spring cleaning the shack and decided to sell a bunch of items including the AR8000. This wideband receiver is in near mint
condition (the radio has some worn paint on the corners but is not real noticeable unless you're looking for it - the clear plastic
lens is perfect - clear digital photos available upon request!). It works perfectly!

Included with the radio is the belt clip, carrying strap, operator manual, 12v cigarette adapter and 110v AC wall adapter. Radio was
mod'ed to include rear battery cover slot for accessories. Also includes 1/8" accessory jack for programming from PC (which is what
I do because there's WAY too many memories).

Also included is a modified US bandplan (AOR's default was not too good) and a ton of pre-programmed memories:

HAM 2M
HAM 440
CB
NOAA Weather
various SW AM broadcast
various emergency (CB 9, MARINE, FEMA, RED CROSS, Mil AIR etc.)
local AIR traffic
GMRS
GM-FRS
standard FM broadcast
all TV channels
all MARINE channels
local fire and police

and there's still room to spare for more programmed memories!!!

$350.00 shipped
for reference check out my eBay feedback
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userId=ke4qjk&page=1&items=0

PS: more feedback should be posted this week because I've just sold more recently

Vic

(NOTE: do NOT reply to this email as it will bounce - SPAM protection - use ke4qjk@qsl.net)
Also if the buyer is interested I will throw in QRZ 2001-2003 CDROM if it does not sell on eBay
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3011029898

Anyone remember or has a copy of an old (at least 20 years old) Radio Shack catalog that listed the price for the Pro-16A crystal scanner. I would like to know the listed price. I thought it was about $300.00.

Technology sure has come a long way.

Thanks in advance,
Ray

It was $299.95 and I had one myself. Just buying the 16 'rocks' for it was
kinda expensive <g>.

The Genuine, Original James S. Prine...accept no substitutes.

> > > Lafayette, LA

You are hearing a "wireless" phone jack....many of them are in the 80 Meter
HAM band(3.5-4.0 Mhz).
They do indeed, use FM.
In some areas, the cable and DBS installers use these too(so the box can "call home".
The ARRL was SCREAMING about these units a few years back-most of the newer ones are out
of the ham band(try around 3.2 Mhz).
There are still many of the 80 Meter units out there(prehaps even new old stock).
BTW, these are quite "dirty", so you may find them on other frequencies as well.

As for what to do about it..well the unit is working as designed, although it's
questionable weither it conforms to the FCC part 15 regs.
One major cable company, after many complants, swapped every unit in a area,
BUT the FCC had to make threats to get them to do it.
You might try contacting your local ham radio club, or the ARRL-contacting
the FCC directly will be more difficult, at least as far as getting results
are concerned.

One other thought, you might consider taking up CW....CQ and phone calls don't mix well :-)

---> Here is my reply to what Barry wrote 3/10/2003 1:04:15 PM

You can find amplified speakers at Radio Shack, you could also use a old set of computer speakers that are amplified, I had a old but good sounding pair of speakers from a old computer that run on 12 volts, I feed my scanner into them and can adjust the base, treble (that I finds lets me understand the scanner better) and the volume.

One other idea is if you have a sound card and speakers on your computer you can plug the scanner into the 'line in' of your sound card and listen to the scanner through that.

Remember in both of these suggestions, the scanner is mono and the speakers (or line in of the sound card) is stereo so you need a small adapter from Radio Shack for 1/8" stereo to mono.

Hope this helps some

K1MAN is COMPLETELY out of his tree.

He can get away with this kind of goofy ham radio crap
since he allegeded inherited a couple $$$ Millions
from his relatives and is an alleged shareholder in
Baxter Medical Instruments Corp - or so the rumors go.

He is, by all sense of the word, the classic archtype eccentric millionaire
with convoluted thought patterns having no basis whatsoever
in reality. He is Ham Radio's answer to Michael Jackson - complete
with his very own "Never-NeverLand" Compound, way up there in frozen
ice-bound-7-Months-out-of the-Year Belgrade Lakes Maine.

While we are on the topic of Maine, how would you like
to have some eye-opening fun...? Call up the toll-free
Maine State Dept of Tourism and ask em' for a free Maine
travel brochure package. When U get it you'll be amazed to see that
8 out of every 10 photos of the various Hotels and
Inns and Campgrounds features a photo of an in-ground
swimming pool, complete with cute (caucasian...grin) kids
in bathing suits running around, and mom & dad on the
lounge chairs poolside getting themselves a suntan...
Yeah right!! Perhaps for 8 weeks in the "Summer" before
Maine goes back into their normal "Little Ice Age" wx pattern!
I was up there once in June and it went down one
night to 38�F - Just what I needed in my bermuda shorts and
Harley Davidson of Indy cotton tee shirt. All kidding aside
we did have a great time, but Maine's Wx is just one step above
Nome AK !

Oh well, perhaps K1MAN should start a ham radio theme
parkjust like M.J. did too ?? Can you imagine for a
minute, ferris wheels with 6L6 vacuum tube shaped gondolas
and bumper-cars shaped like R-390A's! Then he can
run the place just like Michael Jackson does his.......nah!!
Better not give him any more kooky ideas....

:) :) :) :)

"The scientist. He will spend thirty years in building up
a mountain range of facts with the intent to prove a
certain theory; then he is so happy in his achievement
that as a rule he overlooks the main chief fact
of all--that his accumulation proves an entirely different thing..."

> analogue system.

Why not ? It is easy enough to jam GPS, Wireless LAN and other
digital signals. Just transmit stronger signals than the original,
and you are on top.

Of course, with spread spectrum or frequency hopping, you need
wideband jammers.

And, at least in Europe all the cops probably have a GSM phone
for bacup, possible their own.

If you remove the diode "D44" you could probably fetch another couple of dollars for the radio.

As you know what "D44" can do for the radio.

395. (BC250d) I-Calls while in ID Scan Mode?

Newsgroup: rec.radio.scanner
Date: 2003-03-10 22:34:47 UTC
From: JohnW <no@no.no>
Message-ID: <Xns933AB2D4D7901JohnW@216.166.71.234>
Source record: 35161
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Ok. Let's say I want to be able to get I-Calls while scanning my State Police in ID Scan mode (so that I can see alpha tags).
At first I thought all I had to do was assign alpha tags to the I-Call IDs... but then I noticed that the I-Call ID keeps changing! Is there a way around this? How many different IDs do I-Calls use?

Did this post make sense?

Hope it did!

396. WinScan 780 is junk that does not work

I might be wrong, but I think I Call ID's are dynamically assigned.
Therefore your only option would be to enter in an icall ID of 700000
(press - then 0 then E) and tag that.

It wasn't me that bought it, but I will keep watching that page now
that I know about it.

Having just spent the weekend in Vegas, it probably would not have
been wise for me to make the purchase right now, anyway.

412. Unregulated Power Supplies, bah humbug!

Newsgroup: rec.radio.scanner
Date: 2003-03-11 01:22:12 UTC
From: Anonymous@anonymous.net
Message-ID: <v6qemp5levq53b@corp.supernews.com>
Source record: 35178

The wonders of unregulated power supplies. I have several Radio Shack desktop scanners, three of which run on 12 volt supplies. Of the 2 concerning my endeavors tonight, one is rated at 300ma, the other 500ma.

My understanding of this situation would be that, given the appropriate polarity and correct configuration of the plug, it would be permissible to use the 12V 500ma transformer to power the 12V 300ma radio. After all, the radio determines the actual current draw, the current being greater with the light on (not an option on this radio anyway), louder speakers consume more than headphones, etc.

So, for convenience sake, while testing a radio that I hadn't used in awhile, I decided to use the already plugged in 12V 500ma supply for the 12V 300ma radio. The damn thing didn't work.

http://n7olq.home.att.net/Radio/Galleryframe.htm
http://scanpix1.home.att.net/RS/pro2030.jpg

What the hell, this is my fiasco radio, the Pro-2030, I bought it at a flea market, it was a model that was already modified for cellular restoration when I bought it. And it worked. Problem is that it had a peculiar problem of the reception cutting out in a very subtle way. I sent it to Radio Shack for repair. They fixed the problem great and also aligned the radio. The problem was in the RF board, supposedly a bad solder joint. (I couldn't find it, that's why I sent it to Radio Shack for repair). Anyway, when it was returned to me I opened it up to inspect the workmanship, and viola, discovered that the microprocessor board had also been replaced. Now the radio, still bearing the modification for cellular restoration, no longer receives cellular. The reason that it is my fiasco radio is that I paid $75 for the radio, then $75 to get it repaired. I now have a $150 radio that only has 80 channels and I would rather have spent the same money on a newer radio (the cellular part was the intriguing thing though).

Anyway, my fiasco radio wasn't working, damn thing. I took it apart, tapped some things while it was powered up, still no results. The radio worked fine otherwise, programmed ok, scanned ok, searched ok, but no reception. Ok, just for the hell of it I'll try the correct power supply. Viola, the radio now works fine, reception and all.

The problem must have been the slightly higher voltage available from the power supply that is capable of supplying more current, the voltage isn't dragged down as much.

Any thoughts on this issue?

Regards.

An unregulated power supply is just that. If the specs say 12 vdc at 500 ma
then that is what it wants to give you. If you don't need (draw) 500 ma but
only require say 200 ma, the voltage of the power supply my soar to 18, 20
or even higher voltage. Not uncommon at all. You radio may not like 18 vdc.
The rating is telling you that it can meet your need for 12vdc at 500 ma.

Great Radi. I have used it for a year.
PLUS:
1. Great Batt. Life (also have emergency 4AA pack)

2. ONLY HT to cover 144/220/440
3. Wideband ALL Mode coverage
4. Basic but effective computer up/download
5. SMALL (get inexpensibe Kenwod case)
6. True dual Freq. Receive (dual activity leds)
7. GREAT triband included antenna
8. Internal bar ant for AM
MINUS:
1. Needs external ant. for any real HF rec.
2. Tiny buttons for even avg. fingers
3. SMA ant. conn.(I know all use them now)
4. Tiny 2.5mm earphone jack

Amongst the (below) listed plusses, you did not mention the one
which I find at the top of my list: The operation/menu system is
head and shoulders above the others in ease of use. Unlike the VX-5
radio and an Icom I owned, I never find a need to pack the manual
around in order to use this TH-F6A

Hey all...

While in ID SEARCH mode, I couldnt help but notice quite a bit of traffic coming through on talkgroup IDs that I dont see on the Trunked Radio Information Homepage. Can anyone help shed some light on these?

For example - These are the ones I saw with repeated activity while scanning (Site 005 Tolland Co 5W)(CC 868.9125) between 8 and 9 this morning:

688
1600
1968
2320
2352
2432
2544
2736
3200
3376
3664
4000
4496
6512
6544
8112
9808
10384
10608
11408
18800
19600
35184
45216
46096

I'd LOVE to know what they are, so that I could determine relevancy, ie: if I should assign an alphatag to them and include them in my scanning, if need be...

MUCH thanks in advance to anyone that can lend a hand!

The thing with digital is that if the receive radio doesn't get the handshake from the transmitter then the audio will not pass and the receiver will sit quiet. A few years ago, back when our police were analog we had a guy declare war on them on the radio yelling profanities and jamming them when they were in high speed chases. His life on the radio and as a free man was cut very short and that was the main reason that our cops went trunked, encrypted, digital. Now the very second that someone keys up all the radios jump seamlessly to the next frequency and no one hears a thing except the transmission that they were intended to hear. So no jamming is possible. One of the sergeants that I have coffee with said that since they moved they have not had one complaint of interference or jamming.

Sounds to me a switch mode power supply problem.
An alternative linear regulated power supply would solve the buzzing.
Switch modes are well known for generating electrical noise. normally too
low to cause a problem in calculators, But a headache with sensitive
amplifing crcuits like scanners.

look at www.batlabs.com has basic info about the dash 10.
It is a radio transceiver hooked to a terminal...most are on 800 mhz but
will program down to 450mhz. .

I've often read the articles and postings against unregulated supplies, but this is the first time I have seen the consequences of it. Fortunately no damage though.

Are regulated supplies available in wall-wart designs, if so, where?

Thanks.

As Bill Clinton might say, it depends what your definition of works is. On my underpowered Pentium laptop it sent garbage to the scanner when trying to program the memory. The faster desktop worked better but the program is a real resource hog. Its performance was less than I had hoped for and the lack of support earns it a 'do not recommend' rating. ARC780 is head and shoulders above Winscan with solid support and a lower price.

444. shack grounding questions

Newsgroup: rec.radio.scanner
Date: 2003-03-12 01:46:18 UTC
From: Vic <bogus@nospam.com>
Message-ID: <rbwba.14578$lo2.2063@fe04.atl2.webusenet.com>
Source record: 35210

If there is a better (or more appropriate) NG to post these questions please let me know.

After 8 years in the hobby I've finally decided to address GROUNDING. About all I know is equipment should be grounded and
everything in the house (including house electrical) should have a COMMON ground. Well, the shack is at the opposite end of the
house electrical ground. To couple the house electrical ground and a shack ground rod would require a trench approx. 80' long ...
it's not going to happen soon so I'd like to address just grounding what I can for now.

I am wondering exactly what equipment SHOULD be grounded
Equipment is as follows:
(1) HF transceiver(100w)
(1) HF antenna tuner
(2) VHF-UHF transceivers
(1) TNC
(1) 12v pwr supply (astron 35M)
(1) RigRunner power distribution block
(1) tabletop scanner
(1) PC used for digital mode operation

All above items (except PC) are powered from the one Astron pwr. supply
All radios above have different antennas
The PC and Astron are on different house AC circuits
(you may not need all this inf., please disregard what is not necessary)
If there is a web site with the appropriate information the link would be appreciated!

I would like to know what equipment should be grounded, ground wire sizes (for example; is 18 gage wire on the HF rig enough; is
18ga. sufficient for the TNC if the TNC should be grounded etc?

Would it be OK to have a 8' ground rod outside, coupled to the shack ground, even though it is NOT coupled to the house electrical
ground? Is 8' enough ... I can get a 10-12' rod if necessary? Is copper clad iron OK or should it be pure copper rod?

Is it OK to couple the common ground in the shack to the house wiring AC ground?

Also, I have heard certain metals are chemically reactive when touching (e.g. certain alum & copper)
but those are the only ones I'm familiar with. Is stainless and or steel (iron) ok to use with copper?

Lot's of questions I know, but any helpful information would be appreciated!

Vic / KE4QJK

Never use any of the above without ground, especially the Tx's.

>(1) TNC
>(1) 12v pwr supply (astron 35M)
>(1) RigRunner power distribution block

I'll let others debate this one.

>(1) tabletop scanner
>(1) PC used for digital mode operation

In general, they use hse.gnd. RFI from same?
Then consider separate gnd./ shielding.
Beware PC equip. RFI. A plague on some Hams.

>
>All above items (except PC) are powered from the one Astron pwr. supply

>All radios above have different antennas
Irrelevant for most gnd issues. If coax fed the gnd runs to your rig.
Always gnd your rigs !

>The PC and Astron are on different house AC circuits
>(you may not need all this inf., please disregard what is not necessary)
>If there is a web site with the appropriate information the link would be appreciated!
>
>I would like to know what equipment should be grounded, ground wire sizes (for example; is 18 gage wire on the HF rig enough; is
>18ga. sufficient for the TNC if the TNC should be grounded etc?

The "ideal" gnd for your rigs at least would be the shortest, strongest
path to gnd. Better than wire (which is OK) is to strip the BRAID from coax and
run outside to 8' gnd rod, copper-clad. Braid may be separately available places
but it may be a lot quicker to just strip it yourself. Remember to use the gnd.
clamps as sold in Home Depot,etc. Don't just wrap it around the gnd rod.

>
>Would it be OK to have a 8' ground rod outside, coupled to the shack ground, even though
it is NOT coupled to the house electrical
>ground? Is 8' enough ... I can get a 10-12' rod if necessary? Is copper clad iron OK or
should it be pure copper rod?

As above. Gnd your rigs to the outside if possible, copper-clad is fine.
In general, more rods are better - as in one rod per rig. Remember, shorter the
run to gnd the better.
>
>Is it OK to couple the common ground in the shack to the house wiring AC ground?

See above.
>
>Also, I have heard certain metals are chemically reactive when touching (e.g. certain alum
& copper)
>but those are the only ones I'm familiar with. Is stainless and or steel (iron) ok to use

I have had numerous problem with spurious RF from the PC although believe it or not the PRINTER is the worse offender! I must say
though, I found networked PC's REALLY create a problem!

>
> >The PC and Astron are on different house AC circuits

I put this information in because I had heard it helped eliminate PC RFI problems ... don't remember where I read to have them on
seperate circuits. Well, actually I THINK I read it on RigBlaster installation instructions (RigBlaster by West Mountain Radio ...
nice product)

458. (O.T.) Question for the (Mil) Air Comm Scanners

Newsgroup: rec.radio.scanner
Date: 2003-03-12 03:52:14 UTC
From: cathexis@yourhaterols.com
Message-ID: <3e6ea3fe.10950979@news.starpower.net>
Source record: 35224

Greetings,

Technically, this post is off-topic, but maybe by not too much.
If you were at the track with your racing-scanner, wouldn't you want to
match the comms with the vehicle ? Sure you would.

I have a long standing interest in Air comms that I'm going to try
to develop more fully this year. Going back to the time I still smoked, I've
always tried to combine a love of radio with just "sittin' out back". So it's
always been obvious to me that *most* air-traffic follows certains corridors
as they fly over. I've only been in my current house a few months, but I
was in the old place over 13 years; I could always spot Milair, for instance,
if they tracked through certain flight paths overhead because no one else
flew that way. Of course, lower altitude private craft tend to "wander" all
over. But the commercial and milair traffic tend to stay fixed on certain
routes.

In fact, this is so true that some of my best milair sightings have
come late at night when I noticed them because they did *not* follow those
paths. (Including what I once thought might've been an Aurora sighting !).
So as I was milling around in the backyard today watching a flight of 5
large twin-engine (possibly) military jets that went booking, and I mean
BOOKIN', overhead the following questions occurred to me and I decided
to ask them here:

Is there a good web-site that will teach you how to ID craft based
on looking up at them ?

How to learn to estimate altitude and speed ?

Is there some FAA-type site that will help me to match said air-routes
to the specific air-space over my house ?

Given that I have the freqs programmed corectly, how possible is it
to translate what I'm seeing to what I'm hearing ?

By way of information, I live in Fairfax,VA. which is nicely sandwiched between
Dulles and Reagan Nat'l. Andrews is only maybe 30 miles away. Bolling is
closer. I understand the use of a compass, taking bearings, and the concept
of Great Circle Routes.

In an IDEAL world my summer would go something like this: I'm sitting out
on my deck with an HF rig for Ham, a scanner for air comms and a speaker
run out from my PC for Internet-based Talk Radio. I've got a cooler by my side
with a few cold frosties in it. Some snacks and a pair of Binocs sits on the
table. A flight of F-16's shoots overhead and I tell the guy I'm talking to:
"Hey, two F-16's outta Andrews just soared past headed for Langley at about

10K feet and climbing. Go to 135.6 and see if you can hear anything."

I welcome your comments,

Andrew

>and code just don't get along!

You only have to pass it once, but I do understand. Whenever I meet some old Ham that had to pass a 20WPM test given by some old Crone at the local Post Office or whatever prior to the Reagan years and played over some scratchy,tinny sounding Lafayette Cassette Deck, I always regard them with awe. We have it a lot easier. There's always hope !

I have this antenna and will be mounting it on my chimney later in the spring once we get rid of this God for Saken snow...

How well has this antenna proved to be to others in the newsgroups.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=14956&item=3012100641

And some tips on running some coax cable through the house would be good on this too.

Oh, and if anyone cares. I bought this antenna at radio shack last summer.

I paid, $3.99 (Canadian) for it. So I got it.

This maybe true but I tend to trust a friend of mine that installs and repairs the systems and he was the one that told me that. He is currently installing the satellite 911 phone back-up systems in many small towns in British Columbia and services many of the repeter sights that we like to listen to both VHF and UHF.

Some one will warn you that you're treading on "top secret" stuff that
should be left alone in this post 9/11/02 era!

I can't help you with Military stuff, but I used to listen to ACARS
transmissions from the commercial flights, then key the airline+flight
information in to flytecomm.com and get their course. I was able to
ID some flights overhead.

Toss one back for me!

I have a Radio Shack Pro-2005 base scanner for sale. This radio is in Excellent condition, non-smoking environment, bright display, with the cellular and scan speed-up mods. Includes box and manual.

$250.00 Shipped via USPS Priority Mail, insured.

PAYPAL accepted and preferred, but will take a US Postal money order. Personal check OK but the scanner ships when the check clears.

eBay feedbak under OFFDAN.

E-mail if interested.

There's nothing secret about MilAir montoring. Heck in many cases they use the same freqs. as Private and Commercial aircraft. And its very rare you'll hear encrypted comms (had to through that in before someone comes on and say "you won't hear anything as its all encrypted").

For a start check out http://www.MilAirComms.com The first set of freqs you'll want to program in are those for "Washington Center". These are the guys controling aircraft above the Baltimore/Washington/Dullas Class B airspace (from about 10,000' up).

From there you'll hear aircraft saying "push to" than a number. That number will be the next freq they'll be using. That is a great way to start building a collection of freqs in your are.

Also, don't forget to setup you scanner in search mode in the 138.0 to 144 range. Use AM and 25 KHz steps. You'll be suprised at the MilAir activity you hear there.

There is a world of difference between 60 cycle grounding and protecting equipment from lightning and surges. That makes it fun when you hire electricians to do some of the install. They don't understand and argue with you.

A 60 cycle power ground is an open circuit to lightning. Figure lightning is around 70 megacycles for purposes of calculating.

The reason for a single point ground is to prevent voltage drop across ground. A nearby lightning hit induces a LOT of current in any nearby conductor. Multiple paths to ground induces a voltage difference between the different points, and this voltage will force its way to ground through your equipment.

Figure what a few hundred, or a few thousand, amps will do across a few Ohms' difference in ground.

You need a low impedance ground. That is very difficult to achieve. Lightning does not turn corners. You cannot bend conductors in less than a certain radius. Large solid conductors are worthless. Braid is slightly better, but still has far too much inductance to give you the low impedance path you need. Solid copper strap is the best. 1.5 inch is minimum. 3 inch is better. Wider is necessary for longer runs. It comes up to 6 inch in width. 1.5" will do for 95% of installations.

www.polyphaser.com is my source for all this stuff -- protectors, grounding stuff, etc. They publish a booklet on effective grounding which is worth the money.

You need proper protectors specific to each type of equipment. There are 60 cycle protectors for line voltage. There are modules for data, telephone and low voltage. Various inline types for coax. See Polyphaser's website.

Cheap protectors (99% of them regardless of price) are single or multi stage. They are of minimal use. Polyphaser uses typically 3 stages.

The idea is, you need to grab a very quick pulse before it gets to your equipment.

Devices which turn on quick enough cannot handle much current. The devices which handle adequate current take a long time to turn on. Therefore a properly designed protector will have three stages, to turn on early and start shunting and provide protection while the longer, higher current stages start to turn on.

You want protectors which fail in the SHORTED position, which is unusual, so when they fail you are forced to replace them. Separately fuse anything on a power buss for obvious reasons.

Then, once you grab this quick surge, you need to do something with it. Feeding it into the 60 cycle power ground is a worthless effort as mentioned above.

You need to get rid of it in a hurry, hence the low impedance ground.

The single point ground, usually a large copper plate on which all devices are mounted, gives you a common ground to prevent voltage drops across ground as mentioned. This single point ground is grounded to earth with copper strap. Up to 50 or 75 feet or so it OK for 1.5" strap. Ground the mains power going into the equipment with the appropriate protector. Don't worry about a long trench to ground the entire house electrical system.

Then this strap has to go to ground, using proper 'saddle' clamps and preparation of all copper (strap, clamp and rod) by polishing it to mirror bright with Scotchbrite and *immediately* applying copper antioxidant paste. Copper starts to oxidize in seconds.

A single ground rod is not adequate. A ground rod will 'saturate' the ground for a radius of twice its depth. The industry standard is three ground rods spaced twice their length apart, connected in a Delta, Tee or daisy chain fashion with the copper strap and saddle clamps. Use 7/8" copper plated steel ground rods.

If you happen to be on a mountain with a repeater site on rock, you don't even need ground rods. Simply lay a few hundred feet of 3 inch strap on the ground and it will couple adequately.

Remember with the strap, no 90 degree turns unless very gently radiused. Very quick pulses will hit that 90 and keep going straight. I've seen it in videos of testing. Impressive.

All this is not as difficult as it seems, HOWEVER, you cannot take ANY shortcuts. Do it properly according to Polyphaser's instructions and it will work. Take one shortcut, like something you don't understand or seems too difficult, and you're wasting your time.

I have no relationship with Polyphaser other than as a long time customer.

My company manufactures and installs man-rated commo and surveillance systems all over the world. I can't afford to send someone to Delhi to replace a piece of equipment damaged by lightning. We learned long ago how to do grounds properly, and if you do them properly, you won't have any problems. My own office has had lightning hit in the woods within a few hundred yards of the building. We had zero damage. Others in the area to half a mile away lost telephones, computers, video and other stuff. In demos, I've seen wires exploded going into a properly protected system, and consumer grade electronics on the protected side unaffected. We've got a lot of antennas and commo here, never disconnect it, and have never lost anything since putting in a proper grounding network some years ago.

If you want to discuss this in more detail, email me and we can get together on the phone. I don't have time to key in everything you need to know, but we could discuss it on the phone. Could also send you some photos of large ground networks from some of our jobs. In some cases, the grounding costs more than the equipment.

It's worth the effort to do it properly.

Regards .... Steve WA3SWS

So i wanted a scanner that I can connect to my PC. So i went ahead with the Uniden 780XLT. I got it connected, fired it up and everything seems to be in order. The lights come on, so i know it's getting power.

My question is this, where do I feed the documents to be scanned? I have some photos I'd like to scan, but they don't fit through the slots. My wife is yelling at me that I bought the wrong one. She doesn't know anything about computers. I tried to explain that this is the best one, it was like $300. Way better then the $100 HP scanners they have at Best Buy.

Someone please help, I can't wait to prove that bitch wrong.

Thanks

Just to clarify, it is a 2006, NOT a 2005.

Wrong. If one were to jam the control channel with a strong enough signal to garble the data stream, the cop's HT becomes a very expensive brick.

I have added the frequencies I found at last year's race to my web
page. Look at http://home.earthlink.net/~kg4nbb/scanner/scanner.html
for info. No guarantee this year's frequencies will be the same, but
they'll likely be close.

I've this PRO-2006 for sale. No box or manual, but
have the fax-back sheets that explain the programming.
It is un-blocked and backlight is probably about medium.
In other words..not the brightest there is but still very
readable. Looks great and works great. $225 or might
trade for a VR-500 in good shape.

485. WinScan780 Update Now Available

Newsgroup: rec.radio.scanner
Date: 2003-03-12 22:53:25 UTC
From: Pozilla Software <support.xxx.no.spam@pozillasoft.com>
Message-ID: <FTOba.578$JE5.490@news2.central.cox.net>
Source record: 35100

We have fixed the decimal point issue with WinScan780, as well as a couple of other issues in the software. We are aware of the resources WinScan780 uses and we are working to correct that and still have the program function in realtime.
To receive the update, please send e-mail to support@pozillasoft.com and please title the e-mail WinScan780 update. We will need the serial number of your program, which can be found on the about screen of the program.

We will then e-mail you the update for the software.

What caused this problem - Uniden made a change to the firmware of the radio about 6 months ago and this caused the software to start functioning erratically. Pozilla Software just found out about this firmware change and received a new radio last week and we have fixed the problem.

We apologize to all of our customers for the delay.

Warmest Regards,

Adam Goldman
President
Pozilla Software

486. Beta Testers wanted for Scanner Software

Newsgroup: rec.radio.scanner
Date: 2003-03-12 23:02:19 UTC

Pozilla Software has room for new beta testers to test the new WinScanDP. WinScanDP is the programming software for the BC785D and BC250D scanners. To join this beta test, please send e-mail to products@pozillasoft.com and entitle the e-mail WinScanDP Beta. In the e-mail, please include the following information :

* Name
* Address
* City, State, Zip
* Daytime Phone #
* E-mail Address
* Alternate E-mail Address (if applicable)
* Which scanners are being used (BC250D, BC785D, or both)
* Computer Specs (processor speed, ram, OS, etc)
* Briefly tell up why you would make a good beta tester...

We have a limited amount of space in the beta program, but we are looking for people who have a lot of scanner knowledge and can provide quality bug reports.

We are looking to complete WinScanDP and have it ready to ship by the beginning of April.

Thank you,

Adam Goldman
President
Pozilla Software

For sale: Radio Shack Pro 2048. 200 channel base scanner. Receives 800 mHz. Includes antenna and AC adapter. Radio is in good shape. Very good reception on VHF high. This is good base scanner for someone who doesn't need trunking.Manual can be dowloaded from Radio Shack website. This scanner was made by Uniden for Radio Shack. A review of this scanner can be found at:

http://www.strongsignals.net/access/reviews/reviews.cgi

Scroll down to Pro 2048 and click on link to read review. $60 + $10 shipping.

Also for sale is a Radio Shack DX 399 SW/AM/FM radio. This small, compact radio, with great audio for it's size is the same radio as the Sangean 606. Comes in orginal box with leather carrying case, AC adapter, and manual.Radio is in excellent shape, looks brand new and has had little use. If you need a small, compact SW radio to carry with you this is the radio for you. $70 + $10 shipping.

492. unexplained static

Newsgroup: rec.radio.scanner
Date: 2003-03-13 02:48:34 UTC
From: Steve Draft-Peppin <draftpeppin@attbi.com>
Message-ID: <5kSba.67130$S_4.48502@rwcrnsc53>
Source record: 35107

A while back, I started getting static on one of the primary channels I listen to with my handheld scanner. It only occurs when no one was talking on the channel, and the channel is perfectly clear when someone is talking on it.

I do not get this with my base scanner, so I have always assumed it was an issue with the handheld.

I eventually noticed that if I put the antenna on my lap or put my hand around the antenna, the problem would go away. Obviously, this isn't a permanent solution, so I started trying other things. What eventually worked was taking a narrow strip of aluminum foil, wrapping it once around the upper part of the antenna, taping that part in place, then taping the other end of the foil to the side of the scanner itself. I assume this has something either to do with grounding, or just blocking out whatever is causing the static. I'm just not knowledgable enough to know. I just got lucky with that solution.

Anyway, the foil is pretty ugly and makes it hard to use the belt clip, and also makes it important not to set the scanner down certain ways, because the foil gets bent or out of place.

So, I'm just wondering if anyone has heard of problems like this and has any solutions other than replacing the whole unit. I was thinking about trying a new antenna. Also, I'm thinking about getting an external antenna because I'm going to start using it in my car, but I'm not going to waste my money if I have to run foil from the scanner to the roof of my car, or wherever the external antenna will be.

The handheld is a Bearcat 80 and the base is a Bearcat 278. Also, the frequency that has the problem is 154.19.

If it doesn't sound like something a new antenna would fix, can anyone think of something I can do that would have the same effect as the foil but that wouldn't get in the way as much?

Thanks,

Steve

493. Re: unexplained static

Newsgroup: rec.radio.scanner

From: xxxm@ix.netcom.com
Message-ID: <b4ot8q$523$1@slb6.atl.mindspring.net>
Source record: 35108

154.19 is a common FD freq. If your hand held is more sensitive than the base you might be picking up dispatch tones from a distant FD. The tones use less bandwidth than voice and can break squelch or if they are strong enough. If they are just a bit stronger than what your squelch is set at they may sound like noise. They go away when the much stronger station you want to hear transmits. (Desired station over powers noise.)
Placing the unit at different angles (horizontal) puts the antenna 90 deg from vertical. Most public servivce comms are vertical polarization. This adds a little attenuation. Placing your hand around the antenna does the same thing. Sometimes it will even help reception. You could experiment with a higher squelch setting. Also if you are brave enough to open the unit you could place a peice of aluminum foil on the inside back of the unit. CAUTION!!! It would be best to cover all of the said foil with electrical tape; you do not want to blow the scanner up. If you do not want to do that look for screws that hold the board to the chassis/case I have heard that a couple of guys put one of those star washers under the screw and it helped with noise. So they said.

Message-ID: <2%Sba.67462$S_4.49613@rwcrnsc53>
Source record: 35109

Thanks for the info. By the way, I have done all I can with the squelch. Sometimes it works, other times, even when I turn it over all the way, it isn't enough. Some of those solutions might be beyond my comfort level, but I may have to think about giving them a try.

Also, I don't know if this changes your theory, but the base is a lot more sensitive than the handheld. I know this because it receives frequencies from a neighboring police dept. must more clearly than the handheld, yet the static (or whatever you want to call it) does not come through on it. Also, I should say that this did not happen for the first several months I had the handheld. Maybe a new department several miles away started using that frequency, or maybe I dropped the scanner. I just don't know.

Any further suggestions or theories would be appreciated.

So Bloomington-Normal is STILL mulling over options to replace the crappy multinet sytem they have. Most recent rejected idea was to put portable repeaters in the trunk of various county squad cars.

One new thing has been mentioned in recent news stories, though. They have been talking about a statewide digital Motorola system that they're titling "StarComm 21". Anyone heard of this or know just what the heck it is?

Should I start pricing BC 250d's with the APCO 25 add-on?

Should be the same as any other McD's as the regional McD's usually use the
same Tx and Rx frequencies for stores in
the area.

Anyone know of anyone being prosecuted for importing a scanner to the USA?

No, but I recently read they're starting to enforce a new law regarding this, and taking it very seriously. Personally, I wouldn't risk it.

Name Roland Dube

* Address 9 Towle Rd

* City, State, Zip Kingston NH 03848

* Daytime Phone #603-642-4739

* E-mail Address skipd@ttlc.net

I recently purchased a BC785XLT with Digital Card

My Computer is a Pentium III 850Mhz 256M Ram Dual Boot O/S Win 98 and Win 2000 Running on my own Win 2003 Beta Server. Also use a Dell 750Mhz Laptop with 256 Ram. Win2000.

I am a Network Administrator and have in-depth knowledge of O/S and PC's. I am Currently Beta Testing Win 2003 Enterprise server and understand that Beta testing requires feedback to developers

I have been a scanner enthusiast for 20 Years. I monitor Trunked Systems "Ma SP", Digital and conventional analog. Prior to owning the BC785D I used the BC895XLT and also have a BC235XLT.
If I can be of assistance please contact me.

Thanks Roland

I've dropped the price on my Optocom scanner and Probe 7.0 package. Picture is at http://pages.cthome.net/stocking/optocom.jpg This was the last revision of the Optocom before it was discontinued, includes the bitbanger option. Price is $400 shipped continental US. If it remains unsold next week you can find it on ebay. Thanks! Please remove NOSPAM from my email address to reply.

So whats the excuse for BC780 bought a year or so ago. Why wouldn't work then. That crappy software never work with any fireware version. I will never buy any software made by this company again.

Go and get these programs, they answer E-mail's and is well worth it.

ACR 780 http://www.butel.nl/

Trunkstar 780 http://scanstar.com/products/trunkstar780.htm

Enjoy
Mike

"Pozilla Software" <support.xxx.no.spam@pozillasoft.com> wrote in message news:FTOba.578$JE5.490@news2.central.cox.net...
We have fixed the decimal point issue with WinScan780, as well as a couple of other issues in the software. We are aware of the resources WinScan780 uses and we are working to correct that and still have the program function in realtime.
To receive the update, please send e-mail to support@pozillasoft.com and please title the e-mail WinScan780 update. We will need the serial number of your program, which can be found on the about screen of the program.

We will then e-mail you the update for the software.

What caused this problem - Uniden made a change to the firmware of the radio about 6 months ago and this caused the software to start functioning erratically. Pozilla Software just found out about this firmware change and received a new radio last week and we have fixed the problem.

We apologize to all of our customers for the delay.

Warmest Regards,

Adam Goldman
President
Pozilla Software

I am selling a used Radio Shack Pro 2006 Scanner. This scanner is wonderful. Excellent condition. 400 channel capacity. Two speeds for scanning through bands. It has 10 banks to store channels. Much more. Original box & manual included.

Price is $200 or best offer. I'd accept payment through Yahoo, Ebay's payment system, or United States Postal Money Order. Verified seller through Ebay and Yahoo's auctions (this item is not listed on auction sites yet).

If interested, reply via email.

Thanks!

Well, the apple has a nice flavor, and makes for easy eating (no peeling involved) but the orange is far superior to the apple for making orange juice, which only the orange is capable of.

514. SRP Arizona - Helicopter freqs?

Newsgroup: rec.radio.scanner
Date: 2003-03-14 00:12:49 UTC
From: antispam@fake-email.com
Message-ID: <3e711dc1.71929449@news.covad.net>

Theyre flying over me weekly and I have not heard them on the SRP 900MHz EDACS freqs. I'm trying all SRP licensed freqs from the FCC including 2 aero freqs (122.825 and 122.850) with still no luck.. They were once reported to be on 451.475, again no luck here.

Anyone know what freqs they talk to dispatch on?

Better yet, any employees for SRP-AZ on the group? :)

TIA

-ScanMan

515. Bearcat 250 Appears Dead Help?

Message-ID: <TKaca.9583$Re4.2664@fe06.atl2.webusenet.com>
Source record: 35131

How would I go about finding the right kind of equipment needed to listen to police/fire/etc. in my local area.

If I understand correctly, there are different kind of systems that require different types of scanners. Is this correct?

Dave,

What city are you in? Also, try a google search of your city + frequencies. If there are trunked radio systems, usually in the 800mhz range, you need a trunking scanner. You just need to find out what kind of trunked radio system it is (ex. Ericsson, Motorola, etc.) to get the correct kind of scanner you need. Another major factor is range of frequencies. From the freq. you found, what is the range? Then once you've figured all of this out I would recommend you visit radioshack or uniden's website. The only other factor is cost. How much are you willing to pay.

I don't know, actually. There are some 800's listed in my area, but I've never bothered to try listening to them. All my police/fire/ems stuff around here is in the 150's, so I just have a really basic scanner. At first glance, I don't see much in the 800's for you that look particularly interesting, but I'm not sure what you're interested in following. Maybe someone with experience with trunked systems can tell you more about that type of thing.

525. newb q on BC800XLT

Newsgroup: rec.radio.scanner
Date: 2003-03-14 05:15:03 UTC
From: Evets <themtx@foo.yahoo.com>
Message-ID: <Qqdca.9191$Rx4.109@fe09.atl2.webusenet.com>
Source record: 35141

Hey folks,

I recently acquired my mom's BC800XLT that collected dust for 10 years, and to my surprise, it works fine. Got WX, and heard some snippets of local fire rescue, ER dispatch stuff, and what sounded like some hams (from freq. lists found via google). I have no manual, but it seems like a pretty simple scanner to operate, though I have a few questions for those of you with the knowledge and inclination to help:

1) is there a reset feature on the unit? I'd like to get the scanner back to virgin condition memory-wise.

2) I found out how to do manual freq range scans (very helpful) by using lower freq., limit, upper freq., limit, then search, but... I don't know how to program these freq. ranges into channels for easier scanning. Also, are the radio's 40 channels empty in its virgin state, or are some preprogrammed? If they're blank to start, my mom programmed about 25 ch. with some weird freqs (probably unintentionally). Anyone willing to give me a quick primer on this function?

3) Air band - What am I missing here? When I attempt to enter 108, limit, xxx limit, then search, the unit errors out when I plug in 108. I do realize the search range should be in the same band, but what gives?

4) I found some online manual ordering sources and will probably spend the $6 to get one, unless a kind soul want to help me out *wink*

Thanks from a scanner newbie. I SWL as well, and figured with a freebie 800XLT, I could try out scanning...

Steve

Some of the Mc D□s and Donut shops in New Hampshire
have gone to 920- 930 MHz using Wide band FM. They still come
in on narrow band FM, it just doesn□t sound very clear.
This is an unlicensed band and may not show up
in the FCC or other databases. Look around 151, 154 MHz,
do a search around those frequencies,
for the older headsets.

Tried several Mc D□s
in southern NH along I 93 and didn□t find the drive
through on any band. The head sets may be hard wired or up on 2.3 GHz
Try this list- site for an in depth looks a fast food frequencies.

No. You can get more or less full-range scanners, and a digital
module for some models. If it is encrypted, you have to steal
a working receiver.

Okay...based on the emails I have received in response, perhaps I should look at the BC245XLT. Comments? This is for a low-cost scanner for bringing to work and all I am concerned with is CTCSS/DCS recognition and the ability to monitor both conventional and trunked frequencies at once.

Thanks!

I have an FTH-2070. It works just fine in the ham bands, both VHF and UHF. However it is an OLD radio design and only has 32 channels. The programming software is also very old, and will only run on older technology PC's (486 or less) in true DOS mode. The radio is physically large, pretty rugged. I would not consider it seriously unless you truly need an FCC certificated dual band radio. For the price (of a new one) you can get two newer radios, one on each band, with much more capability.

I have not experienced intermod problems with mine, and I do live, and use it, in a tough environment.

So in summary, if the price is right, and you really need a certificated dual band, go for it. Otherwise, buy newer and better. There have been rumors that Vertex might introduce a dual band radio based on the VX-900, which would be fantastic. But those are unsubstantiated rumors, and I've seen no indication that it is true.

No, no. He needs a frack-o-stat. The left handed one, connect that to an Acme model 1 dis-combobulator. Plug that into the "phone" jack, this will turn the whole thing into a fax/scanner.

Hello group I have a 16 channel HT1000 radio in uhf 450-512 in excellent condition comes
with high capacity battery, slow charger and a public safety speaker mic
radio has an analog voice inversion board already installed but unprogrammed
part# ntn8313a I will include an additional board they will only work in
late model ht's that have an option mate board.
I will also throw in a rib box with programming cable will e-mail RSS if needed.
I Will ship nextday air upon
reciept of payment i am asking $350.00 or best offer.
I would consider a trade for a GE MRK III portable in uhf.

Thanks for your time

Have you tried the obvious - like replacing the antenna? It is fairly easy to break the antenna on a handheld. If this happens, the antenna will be seriously detuned, with all kinds of possible results. If the base scanner has an external antenna, try hooking the handheld to it for a while to see if the problem goes away.

If you don't have access to an external antenna, run a wire (about 20') around the room with one end stuck in the center of the antenna connector on the handheld. That should give you a decent enough antenna to compare performance to the antenna on the handheld. If the noise disappears, get a new antenna.

This may also be a good time to clean the antenna contacts. Spray the antenna contacts, and the antenna connector, with a contact cleaner (available at Radio Shack). After doing so (don't over-spray), work the antenna in the connector for a few minutes (remove, replace, twist, repeat).

Finally, while you have the antenna removed, check the connector. If it moves at all, get it tightened down. You'll have to take the scanner apart to do this. If you don't know how, don't try it yourself - get someone to do it for you or send it in for repair.

Anything else suggests a trip to the repair center.

I tried putting my base unit antenna on it about a week ago with no improvement. I'll try your idea of cleaning it out.

The following is the reply from Uniden. For this cost, I might as well just buy one of the refurbished ones I've seen for $80.

Steve,
The problem, sounds like a bad capacitor or diode. The scanner is in need of repair

The total repair cost including shipping, will be $56.95

Please sent to
Uniden Service Inc
Attn: Repair
4700 Amon Carter Blvd

To: Repair
Subject: possible problem with BC80XLT

Hi,

I'm just writing because my handheld scanner (BC80XLT) seems to have developed a problem which neither I, nor anyone in several online scanner discussion groups can explain.

I've had the scanner for about two years now. About 9 months or so ago, I began getting static on one of the main channels I listen to (fire dispatch, 154.19 mhz.) Occasionally it only required that I set the squelch to maximum, but many times, that wasn't enough. I noticed that if I touched the antenna to certain surfaces (primarily my arm or hand), the problem would go away, even on lower squelch settings. I eventually got the idea to put a thin piece of aluminum foil going from about an inch from the top of the antenna, down to the radio itself. That seemed to have the same effect as touching the antenna to my hand.

Just to be clear, the static is not always present. I'm not sure if it comes and goes with humidity, other conditions, or by chance. When it is present, it is only present when no one is talking on the channel. The channel is perfectly clear whenever people are talking on it. Also, I have used the scanner in two different locations which are about 10 miles apart, and the problem occurs in both places.

Also, I am reasonably confident that it is not related to an actual transmission in the area for two reasons. 1) The fact that it seems to be a problem in two different locations (as I said above.) 2) Because I also have a base scanner (BC278CLT) which has never had these problems, even though it picks up signals better than the handheld (which would make me think it would pick up whatever is making the static even more than the handheld.)

I should also mention that sometimes the scanner does not stop on the channel and pick up the static, but when it stops on another channel and someone is talking, it will switch over to the problem channel and there will be temporary static (the channel in question is set as a priority channel.) This made me wonder if somehow the wires to the speaker were affecting this frequency.

Finally, strangely enough, at the times when the problem occurs, turning the backlight on seems to make it worse.

Again, it did not happen the first year or so that I had the scanner.

I don't know if this is a defect that just took a long time to show up, or just a result of heavy use or if I damaged it in some way.

Anyway, I realize this was a long e-mail, but I was trying to anticipate any questions you might come back with and I wanted to be complete. I would appreciate it if you could tell me about your repair services, costs, etc., and what I would end up paying to have you look at it even if it turned out to not be a problem with my scanner. Any other advice would be appreciated as well.

Thanks for any help you can provide,

Steve Draft-Peppin

Hi,

My ar-8000 seems to have lost half of the memory channels. I can now only scan the uppercase banks: A,B,C.

If I press the . dot nothing it doesn't change to lower case.

Is this a known issue?

Thanks,

Ronald

no it's not an issue. It's because you set a password and the lowercase
banks are invisible until you hit"pass" and then enter the password.

Cityfreq is an OK resource to use. I have looked up my town and I got about the same # of freqs, but I can only hear stuff on about 5. It gives you a good idea of range though. If anyone else listens to these freqs, they could tell you what type of TRS the 800mhz freqs are. Note that not all of them are trunked, saying that 800mhz freqs are trunked is a generalization. Until we know what kind of trs the 800mhz freqs are, and what the range of freqs you want to listen to are, it is hard to pick a good scanner.

Gee, that's real specific.... Thanks for the detailed description of your alleged problem.

OK class,
"It don't work" he says...

"It works for me" says I.

Lets see here: Both of us own Windows compatible computers, have the same scanner and use the same software. The only variable in the equation is the people themselves. Mine works, his doesn't. Hmm... what would you think?

Yup. Sounds like an I.D.10 T. error to me too... but I could be wrong. However, since "don't work" tells me nada, that's about as helpful as I can be.

Yes, Emilio? You had your hand up in the back? No you cannot go to the bathroom now - you have to wait until recess.

Anyone heard of these preamplifiers, are they any good? I understand all about signal to noise ratio and intermod and all other problems associated with the use of pre-amps on scanners, but has anyone used this particular brand of pre-amp? If so, feedback please.... I want to use this for Satcom and Milsat work. Cheers.

I simply feed the audio output of my audio mixer into the PC's sound card. Then I use LIVE365's own software (you can download from their site) to send the audio to the LIVE365 server. Very simple to setup, just download the Live365 software. Live365 has a few different software downloads, you need to make sure you download the one for Live Broadcasting....

Thanks
George

Hi Troy,
Thanks for the link. I have used the GRE Pre-Amp which is simular. I do like one thing about the JimPreamp and that is there is a switch for different bands. The GRE was "broadbanded". So the Jim version would be better.

However there is a draw back, especially for both of us as we're both looking for something for the MilSats. That is that both the Jim and GRE is not designed to be installed at the antenna but they're intended to be installed at the scanner. The problem is that the PreAmp is going to amplify the Signal but also all the noice which the coax has picked up. That was a problem I experienced with the GRE Pre-Amp.

What is better for MilAir and MilSats so to use a Pre-Amp which is designed to be mounted at the antenna, that way you're amplifying just signal, not the noise picked up by the coax. I've seen many people use RadioShack MastMounted TV-PreAmps. These have adjustable gain and I've heard of people using this with good results. Its just that I have yet to try. I guess I was hoping to find something better than "RadioShack".

Glad you enjoy the website Tony!
Greetings from the US.

Source record: 35089

I have heard that this Amp has given some excellent results with regard to weather satellites, so much so that when the amp is not used no imagery can be gained, the resulting imagery has been excellent - not much distortion due to noise and the like. I am going to manufacture a yagi antenna coupled with the Jim to attempt to hear the Milsat stuff. All indications so far have been positive, looks like I'm on the right track.

Looks like I have been able to acquire a Jim second hand, so I'll report back with my findings to the hoards. Just using a discone here to monitor local Mil aviation, with excellent results, vide a Pro2006 and AOR 8000, nothing too flash, but effective nonetheless... We'll see about the addition of the Jim and yagi.

If anyone else out there would like to share their experiences please feel free do so, that's what this NG is all about, sharing the knowledge and having fun with the hobby...

All the best, stay safe my friend.

Troy,
Please keep us updated on how that works out! I'm very excited of what you've heard so far about the Jim. Until your post I've never seen one and like I said I do like the fact that its switchable for what band you're interested in.

I have several different antennas. I really love my Antennawarehouse.com ScannerBeam and for an excellent Omni-directional I ahve the Antennawarehouse.com ScanTenna which blows my discones away! I also have a very expensive ($300.00) Create Log Periodic. Excellent antenna, can pickup aircraft nearly 300 miles away at altitude. But its a bit overpriced in my opinon.

I do have a 9 element homemade Yagi centered on 300 MHz I would like to put it to good use for MilSats.....

George

Yah, Clinton built up this big garbage can then kicked it over on his way out. That explains everything.
That is about as great as Freedom Fries which is just another way of calling people names, which is another way of treating people with disrepect, which is why everyone hates us and GWB's position.
Arrogant nonsense!
Where does this "We are moral" stuff even come from?? Fat stupid lazy gluttonous couch potatos. Hope that helps cause I'm speaking to your world.

Welcome to the fun of scanning. Looking on the net and downloading
frequencies is for eavesdroppers. Scanners like to find new stuff and
figure out what it is. Listen to them.

If you are saying
"Them there drain be clogged" they are probably public works
"one is custody" sounds like a cop

Usually listening to the radio traffic will give you a good idea of what you
are listening to, you might not get the correct lable like "tac" or
whatever, but you can at least figure out what service it is.

Our police trunking system also carries public works, fire, schools,
hospitals, and who knows what else.

- three 92 models - orig, A and B... IIRC, orig and A made in Japan,
while B was made in the Peoples Republic... no difference AFAIK,
except in the firmware (which affects certain aspects)... orig
had alpha-tag bug...

- i have a B (you can tell by looking at model # on back)... it's
not a real sensitive recv'r, and doesn't track the trunking system
where i live (my 95 does), but i like the 92 because it works with
Linux (can be programmed by tk92 from bob parnass)... i use my 92
for tracking conventional freqs, and its utility may depend on
where you live and what systems are used (the 92 can track systems
that the later GRE models cannot)

Can't figure Angelfire out. It says that my page is using excessive bandwith, however out of the 1 gig I'm allowed they report that I'm using 67%. My apologies to those who attempted to access my page but couldn't get through. Here's some of what I offer for trade:

1. A Yaesu FTH-2070 dual band public safety HT and rapid charger, very good condition. $200.00

2. Motorola MPD 48 channel VHF HT, good condition, with battery and antenna, on ham and PS channels, $75.00

3. Pair of Radio Shack BTX-128 UHF HT's, new in boxes, $40.00

4. Pair of Motorola HT-440 HT's, UHF 2 channel, on a business repeater channel and simplex. Radios will talk to each other on simplex. Have one drop in charger, 2 extra batteries, and an HT-90 (same radio, different front cover) for parts. $50.00

5. GE "Scorpion" UHF HT, 16 channel, drop in charger and two extra batteries. On business and FRS channels. Good condition $100.00

6, Several volunteer fire lights, headlight flashers and strobes, misc radio gear, GMRS HT, frequency counter, ham/cb power, swr, mod meter.

Want ham equipment such as a dual band mobile or HT,
HF trans, general coverage HF receiver, or
Small VHF hi band HT, Low band (39 and 46 MHz) mobile or HT, or ????
Make me an offer.

yes that's right.

because when the digital scanners come out, instantly all radio
communication becomes digital.

Hmm, now lockpicks, 'slimjims' and the like I have somewhat of an issue with. Those should be 'resticted' to locksmiths, law enforcement personnel. Too easy for criminals too get, and the general public has no NEED to purchase. For burglars, just INSERTNG a lockpick device into a lock even without unlocking the device consititutes 'breaking and entering'.

When a digital system is jammed, the typical user will have
absolutely no indication of what is causing the problem. He just
gets degraded reception or no reception at all. So it's no surprise
they have no complaints of jamming, but we have heard LOTS of
complaints of degraded reception or no reception at all. It's
impossible to tell if it is due to jamming or other problems without
diagnostic equipment.

That's not all bad, as the lack of interaction with he people he is
jamming probably removes a lot of the motivation of the ordinary
jammer to continue.

David Harmon <3e847a27.142168709@news.earthlink.net>...

^ It's impossible to tell if it is due to jamming or other
^ problems without diagnostic equipment.

Most jamming can be detected by listening to the frequencies with a standard (no digital modulation) scanner. An S-meter may help to detect empty high-power carriers but squelch adjustment should be sufficient. But then the scanner becomes the "diagnostic equipment" that you are referring to.

^ That's not all bad, as the lack of interaction with he people he is
^ jamming probably removes a lot of the motivation of the ordinary
^ jammer to continue.

Unless the jamming is intended to mask dispatched calls during a certain time interval. Dispatch centers can minimize this by ensuring that they are using sufficient power. Units further away from the jamming should be able to hear the message over the jamming and take the necessary action.

I just jumped into this thread so my apologies if I'm off track.

Frank

610. Winscan 2.1 with BC245

Newsgroup: rec.radio.scanner
Date: 2003-03-16 00:35:41 UTC
From: GET NJ <info@getnj.com>
Message-ID: <3E73BCC5.626D5227@getnj.com>
Source record: 35025

I've got a BC245 that I've tried to use with Winscan 2.1.

I've installed it on a Windows ME machine with 256 meg RAM and a Windows 98 machine with 64 megs RAM.

On both computers, no matter what banks are activated, intermittently all banks go off and bank one goes on.

This happens on both computers when the scanner is on battery power or plugged into the AC power adapter.

The scanner radio never does this except when used with Winscan 2.1.

Due to this "feature," I've not been able to use Winscan 2.1.

618. Re: ICOM IC-R10 or Yaesu VR-500 or ??

Newsgroup: rec.radio.scanner
Date: 2003-03-16 03:18:04 UTC
From: "Bob Parnass, AJ9S" <not_for_mail@fake789.invalid>
Message-ID: <pan.2003.03.16.03.18.00.971893@fake789.invalid>
Source record: 35033
Cross-posted to: rec.radio.shortwave,alt.radio.scanner,rec.radio.scanner

Both the IC-R10 and VR-500 are interesting radios.

The fit and finish of the IC-R10 are very good, but
it weighs more and requires twice as many
batteries. I measured the IC-R10 current drain
while scanning at over twice that of the VR-500
(158 vs 73 mA).

Both the VR-500's frequency and alpha label are
displayed simultaneously.

The VR-500 scans faster than the IC-R10.
Both models scan slowly, though VR-500 scans
faster (9 vs. 6 channes/sec.).

The VR-500 can scan combinations of memory banks
but the IC-R10 cannot.

VR-500 drawbacks include anemic audio
and a shortwave front
end with limited dynamic range (easily overloaded
by stronger signals).

You can download free, open source software for
the VR-500, VR-120, IC-R2, IC-R3, IC-Q7A, and
other radios from my web site -- http://parnass.com

The "link" didn't work because at the time you tried I wasn't
broadcasting. When I'm broadcasting the link works....

Since I use Live365 for broadcasting I don't know what the actually
linke may be because the website needs to setup JavaScript to start the
broadcast so its not as easy as just using a direct link.

If you actually go to Live365.com you might be able to find the
broadcast by doing a search on Daytona Beach. Personally I've never
done it before since I never had to find my own broadcast. When I test
to see if its working I just access it through my website.

My guess would be they will be obsolete, at least for digital comms, unless manufacturers like Uniden or Radio Shack sell D/A converters for older scanners. This is what is happening to T.V. right now.

Greetings all;
I have a link that you may be interested in. this company will make a pre-amp, that mounts at the antenna. they will also make a unit to your specs for right around $100 (US). I can say from expirence, that you should center your antenna and pre-amp around 260MHz. This will give the best results from the Middle East. 80% is covered, but the there is Msg Traffic that is in the clear.

Just my 2 cents

Since I Broadcast via Live365.com I don't know if you can use your own equipment or direct link.

I've had several people asking me why I use Live365 (who charges me $19.90/month) instead of a free service like shoutcast.com. The answer is this, with the free services there is a bandwidth limit. You can usually only have 4-10 Simultaneous listeners. In a typical day that would be fine. However when I broadcast NASA Comms from a rocket or shuttle launch I'll have 40-60 simultaneous listeners. And when I broadcast the Daytona 500 or Pepsi 400 (NASCAR Crew/Driver Scanner Audios) I'll have over 200 simultaneous listeners. So far my record was 238 simultaneous listeners during this years Daytona 500. Live365 handled it perfectly, no slowness, no dropouts and excellent audio quality. Shoutcast or any of the free services would have choked at about 5 simultaneous listeners.... So that is why I use Live365.

Thanks
George

Since Military Traffic is usually very light on Sundays I've put one of my scanners on the Daytona Beach Trunk system and am broadcasting live.

Should get interesting as this is "Spring Break" week and all the drunken college students should soon be waking up.....

Currently via a 4 input audio mixer I have 4 scanners being broadcast via one link. One scanner is scanning the Daytona Beach Trunk system while the other three are on Military frequencies. So if you hear a mix of aircraft it will be our military getting ready for war.

To listen live go to http://www.MilAirComms.com

George

I think your only problem will be the confiscation of the radio, and that's Very Rare (the few incidents I've heard about happened in Chicago). The sellers usually warn you they aren't liable BTW. I got a handheld Yupiteru from Javiation ~6 yr ago sent through the postal service with no problem or custom fee, but did get a fee charged when a desktop AR5000 was sent via UPS 2 yr ago. FYI, Javiation is a GREAT company to deal with!!!!

Hello. Up until recently I have been able to use my computer and Win93 to program my 2053 and 93. Now, when I try sending to either scanner, the program looks like it's working, but nothing happens on the scanner end. If I try downloading from the scanner, the scanner appears to be sending on the scanner end, but I time out on the computer end.

I recently upgraded to Win XP, but I don't remember if I've successfully cloned since then. Any ideas? Is there a special version of Win93 for XP?

All they have to do is scan them for a price. If it's a closeout it will show
at the register.
If it's not a company owned store they most likely won't honor the close out
price anyway. I know of one ma and pa store that had closeout items on their
shelves at the original price two years after the closeout. RM~

You might have them scan the 20-196 500 ch mobile scanner. I purchased one of those back before Xmas at a near close out price. They said it wasn't a close out but it sure smelled like the start of one.. RM~

VHFRadioBuff <20030316115938.27985.00000105@mb-mp.aol.com>...

^ ... program my 2053 and 93. ... when I try sending to either scanner ...
^ nothing happens on the scanner end. ... downloading from the scanner ...
^ I time out on the computer end.

It's probably the system (COM port) or the link cable, not the scanner or the scanner related program. It may be that the scanner program (Win93?) wants to use standard COM port settings (i.e., COM1: IEQ4, 3F8) and that XP uses something different.

Comon Dan, the guy's trying to SELL it, what do you want him to say?
Wouldn't you be ticked off if you were trying to peddle a discontinued
model, that was too confusing to use?? Of course Sony is discontinuing a
host of hobby radio stuff, but that's beside the point........

BTW, how's the Yupi 9000 doin??

you are using it to scan for various aircraft frequencies... if that's all you really want, I'd suggest that you check some of the pilot and aircraft supply stores (as I recall, there was one called "scotties" a few years ago), and see if they have an antenna specifically for that band. I'm sure there a "rubber duck" antenna available....

Hi Marvin,
Years ago, I purchased a Sony Air-8 from "Sporty's Pilot Shop". The
Rubber Duckie antenna that adorned the Sony radio was not very good, at
all. This is why I am looking upward toward a better antenna for what
is, in fact, a better radio. Thanks anyway, Charles

Message-ID: <b5373c$fs0$1@slb9.atl.mindspring.net>
Source record: 34926

CB and FRS frequencies and their modes are both very different. CB is AM mode, around the 27MHz region, just below the lowest programmable frequency of most scanners (usually 30MHz). FRS is FM mode, around the 462 and 467MHz range, which most scanners can receive.

The thing is that not all scanners can receive in AM mode (except in the aircraft band 113-137MHz), and that not all scanners can receive below 30MHz.

Well, if switching antennas didn't help, that rules out the antenna. That
pretty much leaves only something internal.

THE NEW REVISED AMERICAN NATIONAL ANTHEM:
Sung to the tune of 'when your happy and you know it, clap your hands'

If You're Happy And You Know It - Bomb Iraq
If you cannot find bin laden, bomb Iraq.
If the terrorists are frisky,
Pakistan is looking shifty,
North Korea is too risky,
Bomb Iraq.

If we have no allies with us, bomb Iraq.
If we think that someone's dissed us, bomb Iraq.
So to hell with the inspections,
Let's look tough for the elections,
Close your mind and take directions,
Bomb Iraq.

It's pre-emptive non-aggression, bomb Iraq.
To prevent this mass destruction, bomb Iraq.
They've got weapons we can't see,
And that's all the proof we need,
If they're not there, they must be,
Bomb Iraq.

If you were lucky to be elected, bomb Iraq.
If your mood is quite dejected, bomb Iraq.
If you think Saddam's gone mad,
With the weapons that he had,
And he flicked the bird your dad,
Bomb Iraq.

Fall in line and follow orders, bomb Iraq.
For our might knows not our borders, bomb Iraq.
Disagree? We'll call it treason,
Let's make war not love this season,
Even if we have no reason,
Bomb Iraq.

The French have oil contracts galore - FROM IRAQ
The Russians are owed 8 billion dollars - FROM IRAQ
Tony Blair is quite a friend,
3000 Cruise Missiles we will send,
Saddams tyranny is about to end
Bomb Iraq

:)
IF THEY TAKE AWAY YOUR SCANNER BOMB SAUDIA ARABIA, NO WAIT..... WHO'S NEXT?

Amazing Iraq would have such technology. Looks exactly like the drone
prototypes developed by several American companies just a few years ago.

Troy,
Please keep us updated on how that works out! I'm very excited of what you've heard so far about the Jim. Until your post I've never seen one and like I said I do like the fact that its switchable for what band you're interested in.

I have several different antennas. I really love my Antennawarehouse.com ScannerBeam and for an excellent Omni-directional I ahve the Antennawarehouse.com ScanTenna which blows my discones away! I also have a very expensive ($300.00) Create Log Periodic. Excellent

antenna, can pickup aircraft nearly 300 miles away at altitude. But its a bit overpriced in my opinon.

I do have a 9 element homemade Yagi centered on 300 MHz I would like to put it to good use for MilSats.....

>
> Should I start pricing BC 250d's with the APCO 25 add-on?

StarCom21 is going to be a statewide Motorola Astro25 digital OmniLink
system, using 9600 baud data control channels. While the audio will be
able to be heard on BC250D and BC785D scanners the system will not be
tracked by them.

Since the system is at least a year from the first site being active and
3 or more from completion I would wait until the second generation
digital scanners are available unless you otherwise need a current
digital scanner.

boy you are way off ....
now if I want my wife to shoot with me she *has* to buy a gun of her own.
And I can never sell the gun (unless they have a way to defeat the
fingerprint scan .... but that would sell better in the black market than it
would in a pawn shop.)
Basically this is bullsh#t for legal gun owners to put up with and criminals
to still break the law.
(by the way get me one of those AK47's in a 5.56 cal. the rest of the
country wants $1K for them legally .....)

I don't think it's anything with the COM ports because I can still use my TNC
just fine on the same COM port. I may end up buying another cable in case
that's the problem.

Does anyone know for sure? Anyone else every experience this problem?

Scenerio: Gun purchased for self-defense..

You have a burgler in your house... You go for the gun... He starts shooting at you... You try to to shoot him in self-defense... Oh, shit, it won't fire! Batteries are dead... It can't scan your finger print let alone activate the firing laser... Ain't that a bitch!

PH

P.S. It can be programed to recognise more than one person. I like the part about storing the owner(s)'s personal information in the chip, along with the micro camera that takes a picture every time the gun is fired... Sounds like a bunch of shit to me!

THE NEW REVISED AMERICAN NATIONAL ANTHEM:
Sung to the tune of 'when your happy and you know it, clap your hands'

If You're Happy And You Know It - Bomb Iraq
If you cannot find bin laden, bomb Iraq.
If the terrorists are frisky,
Pakistan is looking shifty,
North Korea is too risky,
Bomb Iraq.

If we have no allies with us, bomb Iraq.
If we think that someone's dissed us, bomb Iraq.
So to hell with the inspections,
Let's look tough for the elections,
Close your mind and take directions,
Bomb Iraq.

It's pre-emptive non-aggression, bomb Iraq.
To prevent this mass destruction, bomb Iraq.
They've got weapons we can't see,
And that's all the proof we need,
If they're not there, they must be,
Bomb Iraq.

If you were lucky to be elected, bomb Iraq.
If your mood is quite dejected, bomb Iraq.
If you think Saddam's gone mad,
With the weapons that he had,
And he flicked the bird your dad,
Bomb Iraq.

Fall in line and follow orders, bomb Iraq.
For our might knows not our borders, bomb Iraq.
Disagree? We'll call it treason,
Let's make war not love this season,
Even if we have no reason,
Bomb Iraq.

The French have oil contracts galore - FROM IRAQ
The Russians are owed 8 billion dollars - FROM IRAQ
Tony Blair is quite a friend,
3000 Cruise Missiles we will send,
Saddams tyranny is about to end
Bomb Iraq

:)

I (like you) have had ICALL progammed since getting my radio... but whenever it stops on an ICALL channel, all I hear is static, no matter what number comes up

Using IDTrackers' hit-and-hold function, I logged over a half-dozen differnet numbers, and some of these stayed active for several minutes but I still heard only static

Hey if you don't like it - Bomb iraq.
If you can't find Osama bomb iraq.
If you can't find the weapons of mass destruction - bomb Iraq
If you can't find the Anthrax mailer bomb Iraq.
If you can't stop the hijackers in time, bomb Iraq.
If people get wise to you moving the "threat index" up and down like it
means something, bomb iraq!

But you were going to bomb Iraq all along anyway so nevermind!!!!!

I think george bush was going to bomb Iraq anyway even if 9-11 hadn't happened. -
He hired all the old gulf war personnel! What did people expect was going to happen???

DUH. DOH!!! DUH!!!

9-11 just helped him out, even if he can't actually make the case that Sadaam has something to do with 9-11.
No one buys that argument.

SO he has to rely on calling people un-american!!!

I like the one where Colon says "We can't go on looking for Weopons of Mass Desruction forever and not finding anything - therefore we need to bomb iraq"!!!! hahahah what a joke!

DOH.

At least we're not listening to the SAME republicans go after clinton - what an embarrassment they are!

Does anyone know of any good frequencies to monitor for traffic reporters Marti unit comms between the station. We have several traffic planes here in Lexington and it would be neat to listen to what some talk about when they're not on the air. Any suggestions for where I need to start looking would be appreciated. Thanks!

Michael Brown KU4UV
Lexington, KY.

You liberals continue to amaze me. Dont confuse me with the facts, Ill just make up some and spin the rest. Is this your motto? Well it should be.

First off the job of the inspectors was not to find weapons. Its purpose was to determine if the Iraqi regiem was in compliance with the many UN demands over the years. They were not.

If you can not see a connection to terror from Iraq when they were found to be the source of the rissen found in England and there admitting to paying 20000bux per suicide / murder bomber that attacked the Israelies then I can see no need in discussing this much further.

Oh and I heard on the news a few minutes ago that SoDamInsane is moving chemical/biological weapons up to the Kuwait border. You know the ones he has denied he had.

Wake up and smell the roses. Whether you like it or not the USA is about to do its soveriegn duty and that is to defend itself.

If you dont like it....how about standing in front of a Isralie bulldozer and giving us all a break?

Have a nice day.

Ok, I have a Uniden Bearcat 210 XL. I am using a CB antenna just so you know. I have buttons that say "Pri" "DLY" "L/O" "WX" "LIMIT(down arrow)" "SEARCH" "HOLD(up arrow)" "SCAN" and "HOLD"
Question 1=I was trying to put in frequenices for cordless phones made by V-Tech, and I put in a frequency like 905.600 and it says error, i can put my own codes in, but not these.
Question 2=Is there a way I can scan a range? I bought the scanner from a garage sale and I have no manual.

anything you can tell me about this scanner, and anything you can help me with is very apprechiated.

You sound like you have been listing to hannity for years - word for word -
recitiation of the party line. Heil Hitler!

You heard that "Our government fears that the Iraquis MAY use chemical
weapons" .
That is not a fact you idiot, because it hasn't happened yet. When you see
the actual chemical weapons then it will be a fact. Get it?
You even used the spin word and the liberal word.

Hahahaha just like the programmed you to. hahaah

You don't even know if I'm liberal or not - just that I disagree with having
a war. Republicans can disagree can't they? OR are they not following the
party line?
Your hannity programming is deep my friend.

I have a BC 210; my scanner does not receive the 900 Meg spectrum, so that might be your problem too. If you were going to scan the 30-50 Meg band, for example, try this...

Press MANUAL. Enter 30.00. Press LIMIT. Enter 50.00. Press LIMIT. Press SCAN.

Do a web search and you'll find more info. You'd probably do better with a screw-in replacement telescoping antenna from Radio Shack, unless all your scanning is in the 30-50 Meg bands.

Bonne Chance!

Here are some websites:

I would check between 450-451 for repeater outputs from the TV
stations. Sometimes they turn the repeater off and you can hear the
copter from 455-456. There are a few high band freqs too but most are
UHF. Of course a lot are using cellphones now...

Thanks...question tho. I've been thinking of buying a 250D cause I'd like to have a portable version of the 780. Will the next version of the digital cards be usable in the current version of the scanner, or will they only work in the next model scanner also. That'd be kind of a kick in the teeth that bought the 250D...

My oh My 'Harding'....bit touchy aint ya? I don't really watch "Hannity"
all that often. But I do pay attention to reality.

Oh and can you explain the reports on the boob tube that said our buddies
the Iraquees are moving CHem/Bio closer to our troops staging area? You
know the ones they dont have and said they destroyed even tho the didnt have
them??????

It don't much matter tho...we are gonna kick their raghead butts back to
Babylon.....trouble is were gonna have to clear all those 'front line'
troops out of the way ....you know the ones that tried to surrender couple
of days back when the Marines fired a few practice rounds?

Why are we broadcasting the Police, Fire and EMS Radio Transmissions ?

General Public Interest : There are many people interested in the workings of the communities Public Safety Departments. Scanner sites are located throughout the United States and Canada that broadcast their city's Police, Fire and EMS dispatch transmissions. We decided to join them.

Appreciation of the Public Safety Departments: Few people realize just how busy both the Public Safety Departments can get, especially during the day. The broadcasting of the dispatch gives you a picture that the spending of your tax dollars on the safety of our city is well worth it. The one thing that should stick out in your mind is the professionalism of our Police and Fire Departments. Under sometimes stressful emergency situations they remain calm and fully under control. That is the sign of a well trained department.

Listen to Live Public Safety Scanners online from across the U.S. and Canada.

Place your scanner online and let us know about it.

Police, Fire, EMS, Tactical

You're too far gone, Dan. Let's try a new approach. Think of this whole scenario as a movie plot, and then ask yourself if you would believe something as far fetched. Can you sell tickets to it? Is it entertaining? Now ask yourself how many other folks (besides your circle of friends) are in agrement with you. And please stop calling everyone that can see this president for the idiot he really is, a "liberal".

This angry man has forgotten what America is all about. I suggest you
live with the same people as Hussain for a while to get a taste of
real one sided government. Upon your return, you'll be kissing the
shoes of a JFK statue, rather than kissing the ass of idiots because
they apparently think they're fooling everyone.

Not defending that towel-headed scum bag, but what would happen if
your government wanted to send policemen into your house to take your
precious guns? He can't cry to the NRA who will bribe elected
officials with pac money. This is not that far of an analogy. But
for the record, let's do him and take the oil so dubya's buddies can
get richer and we don't have to pay big dollars for gas!

725. Recommend Scanning Software for BC785d?

Newsgroup: rec.radio.scanner
Date: 2003-03-18 00:58:38 UTC
From: Daniel Kuttner <Kut-Rite@worldnet.att.net>

Source record: 34991

Hi.

I just bought a Uniden BC785d. I am trying various demo versions of trunking and up/downloading software. They all, so far, seem unnecessarily complex.

Any recommendations?

I can't find a demo of WinScan... they are afraid of cracks. I don't want to spend the dough w/o being able to try one first.

Thanks for any input.

Dan N5ZXX

the reports said the saw the troops miving rockets that are capable of
carying chem weapons.
They also said they are capable of carying anthrax.
They are also capable of carying M&Ms -
Your government is telling you that because it wants you to beleive it!

You made up the spin word and the liberal world and the rush limbaugh
rhetoric on your own?
I don't think so! HAHAH

Many of you make excellent cases for war. But when you call those opposed
to your point of view "unamerican", it just shows that you don't get it!

Calling those people opposed to your point of view "unamerican" is as
unamerican as you are capable of getting.

It makes people skeptical of you, your argument, and your argument for war
because people can sense that you arent; using good sense.

Whether the 2nd generation trunktrackers will use the same card or not,
or whether the card will be updated is anyone's guess at this time. Who
knows, maybe the next generation will not require a card at all...

Are you SURE you want one? pretty sloppy, battery eating RCVR. nothing special about it really. Does nothing exceptionally well. Its kind of like a toaster/can opener/knife sharpener and compass all in one.
Seriously, look at other RCVR's for much better performance.......Eddie

> from a garage sale and I have no manual.

I bought my BC210XL at a garage sale, and I do have the manual. A lot
of it consists of stuff that's not terribly important. Here's some
that is:

>>
> **
> Specifications:
>
> VHF Low Band 30-50 MHz (the manual says 32-50 MHz, but mine goes down
> to 30)
> 2-Meter Amateur 144-148 MHz
> VHF High Band 148-174 MHz
> 70 cm Amateur 420.462-450 MHz
> UHF Band 450-470 MHz
> UHF T-band 470.0125--512.0 MHz
>
> **
> "Programming Frequencies Into the Receiver"

>
> Write if you have any more questions. I have the manual right here.
<<

Scanning a range: I did exactly this just a week ago. I was in Hagerstown MD adjacent to a RR yard. I didn't know what freqs were in use, so I figured I'd scan the entire range. RR frequencies in the US are mostly from 160.215 MHz to 161.565 MHz. So, I turned the scanner on and hit the "manual" button. The scanner stopped on a a channel. I entered 1 6 0 . 2 1 5 and then pressed the "limit" button. I entered 1 6 1 . 5 6 5 and pressed the "limit" button again. Then I pressed the "search" button. The scanner started searching for active frequencies in the range 160.215-161.565 MHz.

That's all there is to it. If necessary, I can send a copy of the manual to you. I have no computer-type scanner, so I can't e-mail you a file.

You cannot write me at Kim_Jong_Il@volcanomail.com; that account was disabled by spammers several months ago. When I go skiing in Switzerland, I use the e-mail account of the fellow whose villa is next door. His account is
mahatmakanejeeves at swissinfo dot org
Either post the questions here or write him.

Dan,

You can't reason with the unreasonable fools.. Perhaps they will finally get a clue after we've kicked the baby killing, civilan slaughtering, little hitler's butt. What doesn't register with Harding is the fact that SoDAM officially declared war on the US and any other country not in line with his tyrannical whims. This isn't a war we have declared, this is a war that we're finally responding to. Gee - do these people remind you of vietnam peace demonstrations? If they really want to do the world a service, then they need to make their peace case to the tyrant. I think twelve years is enough time for Iraq to disarm and stand down.. Instead, they have flexed their muscle in a motion of "I dare you", while fueling the Al-Qada machine to be the thugs and goons just like an enboldened street gang... We don;t tolerate street gangs, why do we need to tolerate and be subjected to the hostility of a street thug gang leader equivelant like SoDAM and bin-Laden the raghead. They have made clear their intentions to strike US and US friendly targets because they JUST PLAIN HATE US!... They proved their hate on 9/11!!! I am glad we are taking a stand and action against this kind of evil rather than just standby while they find more ways to infiltrate our shores and bomb civilan targets. If they want to believe that Iraq would just sit back and leave the US alone if we pulled our troops home, then I'm certain they also believe in the tooth-fairy.

Wayne

Holy shit I had no idea they were so advanced.
With technology like that we might just as well surrender right now and
get it over with .
I'm truly suprised the government would release such shocking info and
risk panicking the public.
Out the door I go for another case of duct tape ,then off to canada,whom
no one ever gets really pissed off at !

"In 1991 Saddam killed 500,000 people when they rose against him. Nobody demonstrated against him then. But now the United States wants to get rid of the dictator, people are demonstrating against it."
-one of the Iraqi liberation soldiers the U.S. is training at "Camp Freedom" in Hungary
"The Iraqi regime and its weapons of mass destruction represent a clear threat to world security. This danger has been explicitly recognized by the U.N."
-Letter by Eight European leaders in support of the United States
"At the end of all of the academic arguments is whether we are willing to pay the price to bring freedom to the people of Iraq. If we are, we will not regret it."
-Vietnam veteran and former Democratic Senator Bob Kerrey
"We are praying you will stick to your resolve to liberate our country from a dictatorial tyranny over 30 years which has caused the deaths of nearly 2 million men and women, sons and daughters." -Letter to UK Prime Minister Tony Blair from Iraqi Exiles
"If Saddam Hussein fails to comply and we fail to act or we take some ambiguous third route, which gives him yet more opportunities to develop his program of weapons of mass destruction and continue to press for the release of sanctions and ignore the commitments he's made? Well, he will conclude that the international community's lost its will. He will then conclude that he can go right on doing more to build an arsenal of devastating destruction. If we fail to respond today, Saddam and all those who would follow in his footsteps will be emboldened tomorrow. The stakes could not be higher. Some way, someday, I guarantee you he'll use the arsenal."
-President Bill Clinton in 1998

Not sure if the 250 manual is the same as the 785, but pages 44 & 45 details
something about entering a FIPS code.
Check it out and see...
Good luck...

746. FS: Universal M-400 Decoder

Newsgroup: rec.radio.scanner
Date: 2003-03-18 07:10:58 UTC
From: pverrando@yahoo.com
Message-ID: <4587596a.0303172310.4c764aeb@posting.google.com>
Source record: 34862

Excellent condition. Power supply and manual included. This unit has a 40 character LCD display, and I will also include a small Okidata 180 dot matrix tractor feed printer with the sale, which is indispensable when using this decoder.

This will decode pager modes POCSAG, GOLAY and Super POCSAG from your scanner.
Monitor pager phone #'s, pager text messaging, news, sports and business updates, stock quotes, etc. Some truly spectacular listening (reading!)
This has been my primary use for this unit, it is very easy to use and a very enjoyable use of a scanner! $300 for all.

The M-400 looks exactly like Universal's current M-450 which can be seen at:

http://www.universal-radio.com/catalog/decoders/0450.html

The M-450 does NOT offer pager decoding. This one does.

For scanner users, this device will decode:
ACARS aviation mode.
POCSAG Digital Pager mode
Super POCSAG pagers
GOLAY pagers
DTMF tones
CTCSS
DCS

For HF folks, it will decode:
Baudot 45, 50, 57, 100 baud
ASCII
SITOR A&B
FEC-A
SWED-ARQ
FAX 120 LPM 576 IOC

The printer does work, uses tractor feed paper, ribbon may need replacing. Printer cable and power cable included.
I have an ebay account, spiffy1238 - if you'd like some sort of a reference check. Paypal or money order accepted.

pverrando@yahoo.com

A pic alone isn't worth much to us hams! If you could get hold of the remote control/telemetry frequencies, modes, modulation, decryption keys, etc. we might be able to have some fun "hijacking" them and doing a "9/11" on his Baghdad bunker!

Visit the Yahoo! group SaltLake Scanner. You can access it here:
http://groups.yahoo.com/group/SaltLakeScanner/

I think you'll find the latest, most updated info there for the TRS's in SLC
and all of Utah.

Regards,

-BHall

764. Need Help for SW Antenna (Kenwood R-5000)

Newsgroup: rec.radio.scanner
Date: 2003-03-18 20:45:41 UTC
From: sunildp@lycos.com
Message-ID: <4a7929a8.0303181245.b097c39@posting.google.com>
Source record: 34880

Hi Folks,

Sorry for asking what is a definite repeat question in the radio scanner group but here we go any way ï¿½ how can I improve SW reception ?

I live in Boston metro area and listening to Air traffic control using scanner interests me a lot. My acquaintance with scanner is limited to VHF scanner 110-130 range for ATC (Ground, Tower, Departure, Approach, ATIS etc.)

I recently received one Kenwood model R-5000 and have been trying to use it to listen to Transatlantic ATC. The model has capability to scan USB and LSB in 1-30 MHz range. Unfortunately, I don't know much about scanners or how to make a good antenna. I recently connected radio shack outdoor antenna (Catalog #: 278-758) which is basically a 70 ft antenna wire with a 50 ft insulated lead-in wire. Unfortunately, the reception hasn't improved a lot and I still have problem. I'd appreciate ideas on what I could do to improve the reception. My house is on a wooded lot on north side of a small hill, almost to the top of the hill. The antenna wire is about 10 ft above ground, stretched to 70 ft, from house to a tree There are many trees on way but I did remove branches. The lead-in wire is connected to it using insulated tapes and I left the extra wire looped so that the copper antenna can be moved further away if necessary.

Would greatly appreciate suggestions on how to improve receptions.

Sunil

Humm, going to be tough to get a trunker for under $100.00. You could
probably
get a Pro-91 or a Pro-92 for around $75-$100. Check Ebay, there quite a few
Pro-91's out there now for under $50.

I use my Pro-91 daily, not a bad radio. Though once you get your first
scanner, it wont be your last. :-)

I also served my country in defense of liberty for all. However, when I got out, I didn't throw away the beliefs I held during my service - the right of all to participate in free political speech, to protest, and so on. I also didn't trash the oath I took back then - to protect and defend those rights. Perhaps that is why I find insults and ridicule directed at Americans exercising their rights so repulsive.

I'd say you'll have good luck with either an Icom RS-R8500 or Yaesu VR-5000.
Both are fine radios.

Maybe you could be a bit more specific about the problems you are
encountering. I had no problem monitoring Transatlatic traffic using
about 30 feet of wire hanging out of a hotel window and clipped onto the
whip of my Radio Shack DX-398 from Florida over the last few weeks. My
R-5000 does a magnificient job with an 18 foot whip or a 66 foot random
wire.

Vic;
The Radio Shack PRO-92 and PR0-2067 and Bearcat BC 780 XLT
all have CTCSS and DCS as do the new Uniden BC 250D and
BC 785D.

GRE made PRO-93, PRO-2053, PRO-95 and Uniden
Bearcat BC 245 XLT; these radios DO NOT have CTCSS/DCS capabilities!
The squelch tone decode-searches with the 92 and 2067 is instantaneous.
Searching for tone codes with the Uniden BC 780,785D and 250D is slower.
The Uniden trunk tracker radios are stronger trunk tracker receivers on 800
MHz Motorola
systems, than are the GRE made Radio Shack PRO-92 and PRO-2067.
Check out this web site for more
info<http://www.strongsignals.net/index.cgi>
I personally do not own any of the above radios, and have learned most of
the above
from strong signals!
Jim

Actually, many of those "hippy trashing the troops" stories (hippies spitting on returning troops and so on) from the Vietnam war era are mostly false. For example, if you served overseas back then, you know that most soldiers flew in and out of secure military bases (on military aircraft) to and from overseas assignments - especially those in Vietnam (commercial planes don't generally fly in and out of war zones). Since those military bases were secure, there would have been no hippies standing on the runway tarmac to spit at the soldiers returning.

Further, to associate all hippies with Jane Fonda would be like associating all soldiers to those involved in the Mi Lai massacre. Such comparisons would be neither fair or accurate.

Again, I served during that period, and traveled throughout this country in uniform, and never experienced any resentment from the hippies (or anyone else for that matter). In fact, most Americans back then went out of the way to help a soldier. The hippies, and many other Americans, were opposed to the war, not the soldiers. Perhaps your experience is different, or perhaps you've been listening to too many barracks-rumors.

794. FS>> Yupiter MVT-7100

Newsgroup: rec.radio.scanner
Date: 2003-03-19 15:14:12 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <8P%da.131140$b8.23864955@news4.srv.hcvlny.cv.net>
Source record: 34810

Previous deal fell through (prospective buyer didn't sell his radio)...

Yupiter MVT-7100 in as new condition with original stock accessories: box, manual, rechargable ni-cads, telescoping whip antenna, wrist strap and cigarette lighter power adaptor.

This radio is wide-band (not cellular blocked) and receives AM, FM, USB, LSB and sounds like no other handheld I've ever used.

It is considered by many to be one of the best handheld scanners ever produced.

$300.00 O.B.O.

Please e-mail me off list if interested.

John

795. pro 93 scanner loader software doesn't show pro 93 model!

Newsgroup: rec.radio.scanner
Date: 2003-03-19 15:46:08 UTC
From: ash477@hotmail.com
Message-ID: <e3b3e2b5.0303190746.74b077f0@posting.google.com>
Source record: 34811

I bought a Pro-93 scanner at RadioShack. They also sold me a "scanner loader" software & cable. When I loaded the software, it asked me what kind of scanner I have. The dropdown shows the Pro 76, 79, 89, 2016 & 2017. It doesn't show the 93 or 95 models!

Did RadioShack do their typical "well it looks like the jack fits" sale and give me something thats outdated or incorrect.

Thanks
Jason Shohet

If your "people" involves military personnel, I recommend you find another career where "retaliation" against Americans is acceptable - it is not in the United States military (placing your doubts you "would stop retaliation" in direct opposition to policy).

Yes. They don't have a clue. It WON"T work on the 92, 93, 95, 2053, 2052.
Take it back...

--
Remove "beforeflight" to reply.
Grundig S350, 780XLT, DX-392, 398, 440, YB400PE, FR-200,
Ray Jefferson 660ADF, R75, R2, VR-500,
SRIII, Halli S-38, 38e, Nc 60 special, H500, and too many Rat
Shack scanners to mention...

Who has a problem????

Take the cable and software back to Rat Shack and get a refund. They
don't work on the Pro-93 or 95.
Get the best software here, It's free.
http://www.starrsoft.com/
Order a cable here
http://www.pro-93.com/
If you are good with a soldering iron, a schematic is available on the
internet to make your own cable for less then $10.00

Dan, my group came back on commercial air. We landed at Juneau for refueling and then on to San Francisco. I am sure I am not alone in that travel route. Departure to Nam did indeed take place from a military base, but again on commercial carriers under charter.

The flower children knew which flights were arriving and did indeed meet them. While any one spitting on me would have caused them some serious discomfort, I was indeed greeted with "Baby Killer" and other leftwing rhetoric.

C-DOT I think has gone 9600baud digital so nobody is listening to them
that I know of.
Listening to Denver PD and Fire as I type this. Many collapsed buildings
and fire trucks are getting stuck in the snow all over town.
The police have run out of tire chains so only about half of them are
able to move.
The suburbs are even worse.
All in all it is a pretty good early spring day in Denver.

Yeah thats right Dwight....all barrack roomers. I especially like your ignorance of military contract flights during nam.

Without getting into too many details...please invision this oh non-believer.

Braniff International, you know the Polka-dot painted airplanes. Uploaded on a stretch DC-8, Had to hit overdrive out of Bien Hoa AB, RVN to avoid ground fire...which we didnt.

Landed at Tokyo International to change aircraft. Ended up at Travis...which has a shared runway with the civilians. Nice anti-war demonstration just off the Tarmac.

Gunny sgt had to hold some of his 'troops' back.

Got inside and the orange robed goofballs layed in front of us to stop us and 'MAKE US TALK TO THEM'. Cops just turned their backs as the fisticuffs proceeded.

I don't believe you have any idea of what your talking about Dwight. At least not the war I was in anyway.

1/2 inch heliax is cheap and somewhat easy to find. Compaired to the run of the mill RG8, or Belden 9913, LMR400 etc ... the heliax wins with the lowest loss. The lower the loss, the more you hear. Plus the heliax has 100% solid shielding - meaning - you wont have any noise entering the cable. The only RF entering will be at the antenna. Connectors are relitively cheap. you can find them new and used on e-bay or at swapfests. Putting them on can be a challenge, but if you have the instruction sheet, that tells you what to do. I would run the heliax from the location of the scanner to within a foot of the antenna - then take a short piece of 9913 or LMR400 and make a jumper from the heliax to the antenna, then another jumper from the heliax to the scanner. You never want to connect the heliax directly to the scanner or the antenna, the stuff is just toooooo stiff and can break connectors on the antenna or scanner.

>entering'.

I recently locked my garage door without the key available at 11 pm. It took me about 2 minutes to open it with simple picks (mostly because I picked it the wrong direction the first time). My other option would have been to call a locksmith (expensive, wait 'till the next day or pay a big premium, stay home from work to meet him, etc), since all my tools were also in the garage. I suppose I could have broken out a window, risking injury and requiring replacement.

I certainly had a need for them, and was quite happy I had them. They're very easy to make, too. Making them restricted only keeps them out of the hands of law-abiding citizens; the criminals will still have them. They're just tools.

Neil Maxwell - I don't speak for my employer

818. Updated Detailed Iraq Maps and Frequencies now Online at MilAirComms.com

Newsgroup: rec.radio.scanner
Date: 2003-03-19 22:35:41 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3E78F0BD.7010207@licensed4fun.com>
Source record: 34832

Iï¿½ve been making updates to the MilAirComms.com page in preparation for the Iraq War. Earlier this afternoon I make updates to freqs and Shortwave Schedules/freqs.

Iï¿½ve just added a new section ï¿½ ï¿½The Iraq Map Roomï¿½. Here you can view and download detailed city maps of Baghdad, maps of the entire country of Iraq as well as the entire Middle Eastern area. Also included are maps depicting where Chemical Weapons facilities are located. Some of these maps are as recent as 2003.

No need to worry, no top secret information as been compromised as these maps are in the public domain.

You can get to the ï¿½The Iraq Map Roomï¿½ from http://www.MilAirComms.com

Yes,

you connect the wire antenna to the binding bosts on the back and then
select ANT 2 on the keyboard - Otherwise you will be lucky to hear
anything.

> with the civilians. Nice anti-war demonstration
> just off the Tarmac. (snip)

You took off from a military base and landed at a military base. Whether you flew on military aircraft or on military chartered aircraft, you didn't travel on a commercial flight using commercial airports (which was my point).

> Got inside and the orange robed goofballs layed
> in front of us to stop us and 'MAKE US TALK TO
> THEM'. Cops just turned their backs as the
> fisticuffs proceeded.

The military facilities where soldiers got on and off flights at Travis were separate from the civilian facilities. And those facilities were protected by military police. Demonstrators would not have been allowed into those facilities and I seriously doubt police (military or otherwise) would have turned their backs to fighting.

> I don't believe you have any idea of what your
> talking about Dwight. At least not the war I
> was in anyway.

If your recollection of that war was fantasy fighting with "orange robed goofball" civilians at Travis, then you're absolutely right - I have no idea about the war you were in.

822. Dutch website?

Newsgroup: rec.radio.scanner
Date: 2003-03-20 01:45:15 UTC
From: nedflanders@psu.edu
Message-ID: <53ff595c.0303191745.f9d2a0b@posting.google.com>
Source record: 34836

Hello:

I had a Dutch website that I found months ago, that one could listen to streaming audio for Allied Air Command in Europe/Middleeast. Does anyone know if this site? I cannot locate it, I've tried all the search engines, etc. A posting here of the web address would be gratefully appreciated.

Thank you in advance for your help!

Cheers,

Ned

823. Trident TR-980 question....

Newsgroup: rec.radio.scanner
Date: 2003-03-20 02:11:59 UTC
From: KG4FBG <kg4fbg_ns@onemain.com>
Message-ID: <Pr9ea.9482$jA2.892618@newsread2.prod.itd.earthlink.net>
Source record: 34838

I just picked up a Trident TR-980.. It's in very good condition, and works well with a 12 vdc wall wart, but there was no battery pack with it..
Would someone have the info on this model that could provide me with the battery voltage and the pin out to the 3 pin battery connector?
With the radio lying (Face) down and looking into the back at the battery connector, from what testing I have done, I believe pin 3, right is (+), pin 2, center is (-), pin 1 left is (?)

Pin Pin Pin
1 2 3
? - +

Any help would be appreciated....
Thanks,
Darrell kg4fbg@onemain.com

"L Rod Hubbard" wrote:
>
> And you can backpedal all you want, but the
> argument is over. You lost it a long time ago.

No backpedaling at all. I wrote...

"Actually, many of those "hippy trashing
the troops" stories (hippies spitting on
returning troops and so on) from the
Vietnam war era are mostly false. For
example, if you served overseas back then,
you know that most soldiers flew in and
out of secure military bases (on military
aircraft) to and from overseas assignments -
especially those in Vietnam (commercial
planes don't generally fly in and out of
war zones)."

If the only argument one can make against that paragraph is a fine distinction between military aircraft versus military chartered aircraft, I'll give you (and/or him) that point if you really want it. However, the key of that paragraph remains intact - stories of hippies spitting on returning troops and so on from the Vietnam war era are mostly false. He (Dan) has not denied that. Fred has not denied that. And you have not denied that.

But, you are right - the argument is over. I have no desire to get into a tit for tat argument with any of you. Good day, gentlemen.

I would not get a trunked scanner unless what is in your area is trunked.
If it is not trunked now it will probably go digital in the future. Digital
scanners are available now but do not work on all systems and are really
expensive.

If the stuff you intend to listen to in your area is mostly conventional I
would get a conventional scanner. Conventional scanners can be picked up
now for well under the $200 you plan to spend on the Pro 95.

I am currently working on a project that requires me to extract symbols from the 4level FSK signal in APCO Project 25.

What I have now is the 4level FSK signal. I need to build a software routine to recover timing synchronisation for symbol extraction. The APCO standards suggest using a stochastic clock recovery routine. However, I am really lost... I can't find relevant information on stochastic gradient clock recovery.

Can anyone help please? Would greatly appreciate it.

Audrey

Source record: 34846

While you could spend much more $ for a trunking scanner and also get digital capabilities, I think a Pro-95 is a good choice.
Do not buy the cable or software from Radio Shack though because they do not work.
Since you said this is going to be your first scanner, it will take you sometime to learn to program and use.
The Yahoo Pro-93 95 user group is helpful and worth joining for help.
The best software is available here: (The best part is that it is free.)
http://www.starrsoft.com/
A good programming cable is here: (The Pro-93 & 95 use the same cable)
http://www.pro-93.com/
As far as an unblocked scanner, there is really no reason to have one. Cell phones are on the most part digital and unavailable to an unblocked unit.
Welcome to the scanning hobby. Hope you get as much out of it as the rest of us do.
Bob

I'm in St. Louis, and you can still find the Pro-93 on clearance for about $120. As far as I can tell the only difference is 300 channels for the 93 as opposed to 1000 for the 95. Don't know if the extra 700 channels make a difference, but I'm very pleased with the 93 and have not come close to filling up the memory.

Louisville and Louisville County appear to be trunked Motorola systems and not digital. The Pro-95 does not do digital. For that you would need the new Uniden scanner for about $600.00

Yupiter? Isn't that just before Neptune? Good price, However it doesn't Trunk Track, and it is FAST becoming a neccessity in these United States to buy a Scanner that at LEAST does Trunk Tracking.

You are correct later that day various radio techs were
testing,,,,,,,, it went in and out of failsoft then back to normal.
Also there seem to be single or double channel sites that run that
mode all the time. Cant seem to trunk track something like that, and
conventional scanners dont work well with it either. Vox detected
squelch seems to be all that works.

Get your facts right Dwight - believe it or not, there are other countries
than the US that are currently involved. I don't give a shit if the
arsehole who takes a swing at me, or dumps a bucket of shit (literally) on
me is of my own country or not - he/she incurs no special rights to do that.

FYI, the 26 is blocked and cannot be unblocked. You can modify it to receive images. If you want unblocked without mods you're going to have to spend the $ or get a Euro one. Do some research on Google and you can learn a lot.

Sometimes people become very closed minded when they believe something
is true. Seems that this is happening with more than one belief in
the recent threads. Ignorance is bliss, thanks for showing that there
are some intelligent people out there that are willing to discuss,
debate and learn.

850. Bug in Win93 v00.31?

Newsgroup: rec.radio.scanner
Date: 2003-03-20 15:39:47 UTC
From: vhfradiobuff@aol.comspamme
Message-ID: <20030320103947.05924.00000217@mb-fe.aol.com>
Source record: 34765

I had a strange thing happen and I figured some of you on the newsgroup might be interested. I'd email it directly to the author of the software, but it appears he's too busy to reply to his email...

I had a bank setup for Motorola trunking in the 400 mhz range. I recently deleted the channels in this bank in Win93 by holding down Shift, then going to the last frequency and clicking on it, highlighting all the frequencies I wanted to get rid of. I then cut and paste frequencies from another bank into this one. I loaded this new file into the Pro-93, and started scanning. When it got to where the old trunked frequencies used to be, instead of having the text tag that I had entered, it showed "Bank 0/Ch #" (With # corresponding to different channel numbers), just like when trunked frequencies are programmed in. The bank that it's scanning when I get this is Bank 9. None of the channels referenced in the text tag have anything programmed in them.

The other strange thing is that although the frequencies programmed in the channels that never had trunked frequencies programmed in them display a text tag, they display the WRONG text tag. It just so happens that these frequencies are duplicated elsewhere on the scanner, under different names (example: One frequency is programmed in another bacnk as a police department in Ocean County, and it's programmed in this bank as a fire frequency in Burlington County). I am not sure why the scanner would be giving them tags from another bank.

I've done a reset and reinitialization of the scanner. I deleted the frequencies, saved the file and uploaded the new file without anything in bank 9, then pasted the frequencies back into bank 9, then uploaded again and the results are the same. I manually entered the name of one of the frequencies in the old trunked channel and it still didn't work. I also cleared all trunked data and made sure al the modes for these channels are FM and not MOT.

About the only thing I haven't done yet is to delete all the frequencies in this bank and manually enter them without cutting and pasting.

Any ideas would be helpful!

Only if your area uses an APCO-25 digital system. if not, go for a BC780XLT
instead and save money.
The 780D is expensive, and then there's the additional $300.00 required for
the APCO-25 card.
The 780D will not be of much help in areas that use Pro-Voice or another
type of digital system.

You could buy a 780D to get the additional channel capacity and still hear
analog frequencies, but its alot of additional
money to go that way.

I believe the 785 is only about $20.00 more than the 780. I would say
get the 785 and if you don't care about digital don't buy the digital
card. That way you have the newest scanner, a great scanner and on with
more channels. Plus the ability to later install a digital card if
needed for another $280. I think its worth the extra $20.00 for those
features.

858. Live Military Communications Now OnLine

Newsgroup: rec.radio.scanner
Date: 2003-03-20 17:37:17 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3E79FC4D.6050003@licensed4fun.com>
Source record: 34774

Now broadcasting live Military Air Communications from Florida. You'll be hearing numerous aircraft dropping bombs, firing missile, and engaging in mock dogfights. Its been busy during the day hours.

Most of what I'm broadcasting is 4 scanners of VHF/UHF MilAir freqs. If/when there is action on the HF freqs I'm monitoring I'll patch that in as well. Also if Radio Kuwait starts issuing warnings on their 1800-2100 UTC English broadcast I'll patch them in as well (Radio Kuwait broadcasts on 11.990 MHz)

Since most of our local MilAir action is daytime I will try something different tonight. If local activity dies down Iï¿½ll replay the afternoons mil action. Since I record all I hear digitally I can then rebroadcast the days action at night for those working folks who canï¿½t listen live. During the rebroadcast youï¿½ll notice that there is no long periods of silence. This is due to when recording the days activity my recorder is on VOX mode meaning it doesnï¿½t record the silence between transmissions. From some of you you may find this more interesting as it is constant actionï¿½.

You can hear the live and recorded broadcasts at http://www.MilAirComms.com. Most likely Iï¿½ll start the recorded broadcast at about 2000 EST (0100 UTC). However live broadcasting is taking place now.

George

if you must do buisness with him, use some sort of escrow service.
however, I would seriously recomend not doing buisiness with him.

I am currently pursuing a civil suit against him, though I never expect to
see my money or what I supposedly purchased (some solar panels). I sent him
a money order like an idiot. this was Nov of 2002.

do a google groups search on "FRAUD ALERT - 'DAVE MUNROE'"
and "BEWARE of David Munroe"

also see http://www.trentu.ca/csd/newsarchives/trentu/csp/general/602

Message-ID: <3E7A1271.32E2DF9B@optonline.net>
Source record: 34778

Sounds like you have a PRO-93 with version 1.0 firmware, the version
with the text tag bug in it. Is this the case? If so, this text tag
bug is well documented, and it is a problem with the PRO-93 firmware,
not the Win93 software. The bug is that the Bank 0 text tags overwrite
the Bank 9 text tags which you may have entered. The bug is fixed by
having RS update the firmware to version 1.03.

There is a way to check the firmware version, I believe it is to hold
down the "3" key while you turn the scanner on. If that is not correct,
the correct method is documented somewhere on these newsgroups.

Walt

863. Digital scanners. Do they scan on the same freq?

Newsgroup: rec.radio.scanner
Date: 2003-03-20 19:47:45 UTC
From: esco@icyspicy.com
Message-ID: <19b4e9dc.0303201147.25f98a46@posting.google.com>
Source record: 34779

Or no? Is there a digital and analog channel on every frequancy? I
heard that the michigan police switched to digital freq. Will they
still be on the same numeric frequancy or are these new frequancies?
Basically I was facts.
When I searched I found the same crap over and over again.

You would think that this would be the case, but it ain't so anymore (at least around here in St. Louis). Not to bash Radio Shack, because I've found them helpful on lots of things, but no one I talked to when looking for this scanner could give me any information other than "buy the book".

Source record: 34782

It does sound like you have 1.00 firmware as Walt suggested. Here is a detailed description of the bug.

Alpha tags for channels 816 - 929 are mirrored in channels 000 - 113. It appears that only one byte was used for the address of the channel number and that covers 256 channels rather than 300. Channel 816 is the 257th channel and its tag is wrapping back to the first channel, 000. All channels up to 929 are affected, with 929 wrapping back to 113.
This affects all version 1.00 firmware PRO-93's. The PRO-2053 has version 1.01 firmware and is not afflicted with this bug.
If channel alpha tags are not entered in channels 816-929 the tags in channels 000-113 are not corrupted.

This problem affects version 1.00 but was fixed in 1.01 and 1.03.

If you belong to the Yahoogroups PRO-93_95 group, in the files area there is a test file called bugtest.p93 which will illustrate the problem. The URL (which will wrap due to length) is
http://groups.yahoo.com/group/PRO-93_95/files/PRO-93/P93%20FREQUENCY%20Files/P93%20Test%20Files/

I checked, and I do have version 1.0. What does RS charge to update the
firmware? I probably won't get it done because I've decided to buy another
cheap scanner. I was going to bring the Pro-93 with me to work and scan
frequencies there in banks 7 - 9, but I think I'll just by a cheap scanner for
that...

You're getting confused. Freqs are freqs, ditital is a MODE, to keep it
simple, like AM, FM, or SSB. You have to have a radio that can receive
the correct mode to listen to it.

a frequency is a frequency. Digital is a mode. No such thing as a digital or analog channel. Technically there are no channels. But people use channel and frequency interchangeable. Hope that answers your question. An analog scanner can pick up the frequency, but if the emission mode is digital it will not produce a voice sound from the speaker.

Take the radio to your nearest Radio Shack store and have them send it to a regional repair center for a firmware upgrade. It will be done at no cost and takes two or three weeks.

Even better, if you haven't already, is to file a USPS mail fraud report,
especially if the address is valid. I think that's a pretty serious crime.

good luck

880. Need antenna recommendations for BC250D

Newsgroup: rec.radio.scanner
Date: 2003-03-21 03:34:15 UTC
From: Dustbunny <barfco@swill.com>
Message-ID: <vn1l7vcclbfgbdjhka0kgfehoki87dtkbg@4ax.com>
Source record: 34796

I live in the San Fran bay area, and my factory antenna seems to be a POS. So I'm looking to get a good replacement. I listen to San Fran, Alameda, and SFO trunked systems, as well San Mateo public safety (400MHz), and aircraft. The Austin Condor that ScannerMaster lists seems to have good specs.

Anyone have experience with this antenna, or have other recommendations?

Please respond here, email addy is invalid.

Thanks

I live in Western North Carolina, and I was wondering if anybody has found any active military channels that can be received in this area. I am mainly interested in what war-related signals I can get, but anything related would be nice. I am using a trunk-tracker too, so if you have any trunkd systems to recomend, i can ust them too. I appreciate the help!

Walter,

You are sort of correct. It's actually a virtual downconversion technique.
This mod is so simple that it was actually performed before a US
Congressional subcommittee hearing. Read the full story here:

http://www.durhamradio.com/pro26r.htm

That's why it was subsequently discontinued. ;-)

888. 1 Discone into 2 PRO-2067 Scanners ... HOW?

Newsgroup: rec.radio.scanner
Date: 2003-03-21 05:02:04 UTC
From: Dave Schmidt <n9nlu@NO_SPAM_charter.net>
Message-ID: <v7l7b5ijif4nb4@corp.supernews.com>
Source record: 34654

I have 2 - PRO 2067 scanners and 1 discone antenna fed with Belden 9913. I would like to feed both scanners off the same antenna, but if I put a " T " inline, I would throw the impedance off and possably introduce some db loss from the mismatch. Anyone have any ideas on how to make a 50 ohm splitter or know if there is a commercially built 50 ohm splitter available?

Thanks

Yes, the 785D has the info on pgs. 43-44. I have the codes programmed.
My area did not receive an alert during the last storm so I don't know if it
actually works or not...yet.

What I would like to know is if the radio will receive the weather alert if
the
radio is performing normal scanning of bank frequencies?

At my location I don't get many weather alerts so I have not been able to
test this out myself. I was hoping someone in an area where alerts are more
likely could help me out.

Source record: 34662

The Radio Shack PRO-2053 or PRO-2067 and the
Uniden BC 780 XLT are all great conventional and trunk tracker
scanner base radios.

Check at <http://www.strongsignals.net>
go to FAVORITE PAGES then click on MESSAGE BOARDS
down at the bottom of the trunking board are lists of
trunking radios, look there for more details and specs.

They can be programmed via computer.
The Uniden 780 can also be controlled via the computer.
Using a computer to work with a radio is great, and time saving,
it also helps keep the radio's keyboard from wearing out!
The PRO-2067 and Uniden BC 7809 XLT do tone coded squelch
which is a must! If you have any APCO-25 Digital systems then
the new Uniden BC 785D is the way to go. You may want to buy this
radio then get the digital card later when and if it's needed.

Check the trunking frequency data bases at the bottom of the
trunking board at strongsignals to find out if any one has gone digital
in your area.

Bring it back and ask for a refund of the difference. If you've had
it less then 30 days they'll do it (or at least should, since you
could just return it for a full refund and then buy a new one at the
discounted price).

Yes, a very effective signal splitter! A normal signal splitter at a minium will have a 3 dB loss at each scanner you add. The Stridesberg will make up the difference with a 4 dB amp.

I've seen some TV splitter which state right on the package: Min Insertion Loss: 10 dB! You get what you pay for when it comes to signal splitting....

I have two Stridesberg and will be order about 2 more very soon..

I went through the same thing. There are two alternatives I've tried.

1. I bought a fairly cheap amped TV splitter (RCA) that did a very
good job. Ran 4 radios off of it, got a little extra noise, which is
to be expected. No lockups. It is 75 ohm of course, so RG6 might be
the ticket, although I'm running one 50 ohm line without any
noticeable loss. If it doesn't work, take it back to Walmart.

2. Industrial Communication Engineers, LTD at 1-800-ICE-COMM, sells a
4 way multicoupler for less than $60. I have a HF one, they can make
whatever you want, with any connectors you need. It's amped, +6db,
and works like a champ.

Since there isnï¿½t much live military comms in the evening Iï¿½ve taking the recording of comms caught today and am replaying them at http://www.MilAircomms.com.

Since when I record Iï¿½m using a VOX type recorder there is no space between comms, in other words it constant action.

These comms were from various military training missions and military aircraft flying through the Florida area. Have fun and enjoy.

912. Alinco DJ-X2000 bug hunting

Newsgroup: rec.radio.scanner
Date: 2003-03-22 01:21:49 UTC
From: haxtemp@btopenworld.com
Message-ID: <lbdn7v8ldqtrn1k7gldosd6ot9iut33n3s@4ax.com>
Source record: 34682
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Got a DJ-X2000 two days ago. Particularly interested in this make due to its alleged bug finding capabilities. Unfortunately while these look nice in the advertising blurb and instructions, they are not very good in practice, in my experience, unless there's something wrong with this particular unit.

Suppose for the sake of this post that there is a transmitting radio bug somewhere in the tested location. We are trying to find it. The scanner provides a number of functions which are relevant to such activity.

"Flash Tune / Frequency Counter" seems to be a dodo. Flash Tune sits for half an hour with CHECKING grinning all over its screen and doesn't actually tune into anything at all. Frequency Counter finds frequencies in the cellphone (UK) range, 901-908 particularly, so if there is no other local transmission perhaps that bit works.

Transweeper is a disaster. It emits a constant loud tone (good), locks into a frequency and finds it all over my house at a distance of one meter. (It does this for numerous frequencies). It declares as "bug" frequencies normal broadcast FM and TV stations. It finds so many false positives (in VFO + PMS scans) that it is impossible to tell whether there any real positives at all.

Does Transweeper only detect regular unencrypted audio bugs, or can it also find more sophisticated devices which use encoding or spread-spectrum/frequency hopping? That would be too much to expect?

Field Strength Meter doesn't work either. Meter display mode doesn't show any RF signal at all, even when next to a cordless phone. Set-Level mode initially buzzes madly on level three for ten seconds, then even at level one cannot find any signals higher than that level, even when next to cordless phone.

Is my unit jinxed, or are all these scanners the same way? This is not what I paid ï¿½500 for.

Any handheld scanners other than Alinco DJ-X10T and Yupiteru MVT-7300 that include 24 hour clock/timer?

I was looking for a small AM/FM/SW/WX radio, but they do not exist (only Radio Shack has anything close, and it's too big and SW bands are limited). So I thought instead I'd get a handheld scanner, but so far the only U.S. model I've found with the features I want is the Alinco DJ-X10T. A little expensive at $320. The Yupiteru isn't sold in the U.S. as far as I've seen.

I guess since the weather bands are U.S. only, most of the SW receivers don't bother to add that band, and most scanners don't include any sort of clock/timer.

My husband finally went out and got my Radio Shack Pro-95!!! Yeah!!! I took one look at the manual, though, and I'm totally clueless! I was that way when he first got my shortwave radio, but I finally learned. I guess it just takes time. :)

Get the software and cable to program the PRO-95 via
computer and using this scanner will be easy. Also if you lose the data
or travel to other locations, memories can be loaded from computer files.
Here's a site that supports GRE/Radio Shack trunk trackers
<http://www.pro-92.com/>
another great site is <http://www.strongsignals.net/index.cgi>
Jim

All right here is the problem,
I have two batteries for the BC245 and one charger AC and one charge DC/car.
I want to fix up another charger so I can charge the single pack while
using the other.
What I want is to buy or make a plug that will fit the little flat female
plug of the Nicad (1954-ACTV-PT-MQ--QP.

Also I would like to have a unit/adapter that will go from the cigar plug
to the battery while I am driving.
I hope some one has faced this problem before and will share.

Sorry, but thats Alinco.

Que Paul, who will now tell you how good it is (despite the fact that everyone else thinks they are crap), he will insist it's an excellent unit, that battery life is excellent (lmfao), and try and convince himself that a radio for under £500 can be a good performer.

I haven't got my BC780xlt manual in front of my, but if I remember
correctly, the weather alerts only come through if you push the WX
button twice. It'll go into standby and only do anything if theres an
alert for your area.

It won't receive weather alerts in regular scanning mode.

933. Pro-2053 or Pro-2067 Scanner info?

Hi,
Just wondering if anyone could tell me which is a better radio between
the 2053 or 2067?
What are the differance? other than number of channels?
How does it compare to the BC-780?
I see the 2053 is quite a bit cheaper to purchase than the BC780
Does R.S. still sell the 2053? if so how $$$
I do not need Digital in my town..
Please e-mail me directly not to Ng.
Thanks very much for any info!

934. Warning - Please Share This!

Newsgroup: rec.radio.scanner
Date: 2003-03-22 16:08:53 UTC

Message-ID: <3e7c873c.4567122@netnews.attbi.com>
Source record: 34700

My sister-in-law, who is an ER nurse at the UCLA Medical Center, called me last night with the following warning. Please share it with anyone who might benefit.

A man who works for City of Los Angeles was using the toilet and decided to flush while he was still seated. This is a practice he had done numerous times as a courtesy to others using the restroom. He had entered the restroom immediately after the janitorial staff had cleaned it. When the man entered the restroom stall, he noticed that the janitor had left some toilet cleaner in the toilet. He did not think anything of it because the janitors always left some cleaner in the toilets to make the restroom smell fresh.

What the man didn't realize was that the cleaning solution in the toilet was an extremely caustic chemical, similar to drain cleaner, used to sanitize the toilet. The cleaning product instructions were printed on the container only in English, but the janitorial staff spoke and read only Spanish. Leaving the chemical in the toilet allowed more time for the cleaner to work, and the janitorial staff assumed that the person who used the restroom would flush the toilet before siting down.

When the man flushed to toilet while he was seated, a small amount of the cleaning product splashed on to his backside and rectal area. When he wiped, this spread the chemical. Unfortunately, the man was on his way to a meeting that lasted an hour or more. During the meeting he felt some burning sensation, but he attributed it to some spicy food he had eaten the night before and he though he had not wiped properly after using the toilet. By the time the meeting was over, the man was in great pain. He went to one of the restroom stalls and tried to inspect the area as best he could. He decided to go home, where his wife took a look. It was then that she saw his red, blistered skin. She immediately took him to the emergency room where he was treated for second degree chemical burns. Luckily the product has been partially diluted by the water in the toilet, otherwise the chemical would have eaten away his flesh.

My sister-in-law said this type of incident happens several time each year. She thinks there should be a law that business owners must post warnings in each stall not to flush the toilet while seated.

Message-ID: <MPG.18e65e0e735eb6db9896d7@trialnews.peoplepc.com>
Source record: 34701

I have a Uniden Bearcat 200XLT handheld scanner (with cellular coverage) for sale. A few features listed below:

Channels 200, Banks 10
Coverage 29-54 118-174 406-512 806-956 MHz
Priority 10 channels, Delay, Lockout, Keypad Lock
Instant Weather
Display Light
Power: 12 volts
Size: 2.75(W) x 1.25(D) x 7.5(H) inches
Weight: 20 ounces

I have the antenna, case, 2 BP-200 rechargeable battery packs, wall charger/adapter, car charger.adapter, and a copy of the manual. I do not have the original box or original owners manual.

The 200XLT is in fair condition and works fine. Both batteries are good and hold a charge, one of the BP-200 batteries is brand new. There are some scratches on the case and display. The selling price of $80.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

942. Antenna Grounded?

Newsgroup: rec.radio.scanner

Should a scanner antenna be grounded?

If I install the mast on the roof it will not be grounded.
If I install the mast up the side of the house it will be in
contact with the ground.

Does it matter if the antenna is grounded or not? How does
grounding affect reception?

Get that antenna as high in the air as possible. Dont worry about grounding the radio, and ground the antenna mast if you are in an area that gets lots of lightning. I live in the west where Tstorms are rare and do not bother grounding the masts. When Tstorms do show up, I diconnect everything. Have fun!

Hehehe.... They can put gas in it if they want to, I guess. ;) Anyway, it's definitely not a new automobile. It's a rugged jeep! But they can still put gas in it!

No, seriously. Thanks for all the help. My husband bought me a CD called Police Call that was on clearance for $4.97 at Radio Shack. I realized later why it was so cheap, it was copyrighted in 2000! I guess that's better than paying $19.99 for the book, especially since I'm new at this. I will admit it took me a while to learn the whole shortwave radio thing, but my goodness, the manual to the scanner is Greek to me! And I will say I'm an intelligent girl, I have a degree in mathematics with a minor in computer science, and that manual is still way above me! I played with the scanner until 3:00am this morning and I think that by just playing with it I am learning a lot more than reading the manual, but I still should read it so I don't miss out on any thing. I would like some new frequencies. I tried to input the frequencies for my old high school and college, but they apparently are now towing services! If anyone has new frequencies for the Louisville, KY area, Clarksville, IN, New Albany, IN, Jeffersonville, IN and Floyds Knobs, IN, I'd be thankful! (AmeriChicken may be right....I do have lots of requests...)

Someday I plan on getting a cord that will go into my computer because programming it by hand is proving to take a lot of time! Are they expensive?

Thanks,

"Washington Whispers"
Monitoring Times® March 2003

Fugitive Radio Operator Arrested in NC

Steve Anderson, 55, of Somerset, Kentucky, a right-wing extremist pirate radio broadcaster and former member of the Kentucky State Militia, was arrested in southwestern North Carolina after eluding authorities for over a year. He previously held the Extra Class AA8DP Amateur Radio call sign.

A tip received following a November 2nd Fox television episode of America's Most Wanted and forwarded to federal officials led to his arrest. It was the second time that the show had featured Anderson, an alleged racist and anti-Semite accused of talking about killing federal law enforcement officials on the unlicensed radio station he operated from his home. (See April 2002 MT for background story.) Fox-TV first covered the case in April 2002.

Anderson is the former operator of the clandestine KSMR (Kentucky State Militia Radio) and a man on the FBI's most wanted list. He was arrested by officers of the Federal Bureau of Alcohol, Tobacco, and Firearms and the North Carolina State Bureau of Investigation.

Anderson is accused of shooting an automatic weapon at an off-duty Bell County sheriff's deputy on October 14, 2001; the deputy had pulled Anderson's truck over for driving his pickup with broken tail lights. The officer saw a magazine to a gun in his cup holder and asked if he had any weapons. At that point, according to authorities, Anderson stepped out of his vehicle and opened fire with an AK-47 at the officer and his patrol car. The officer was unharmed although his cruiser was struck about 25 times.

Police said Anderson then drove his 4-wheel-drive Kentucky Militia truck into the Eastern Kentucky mountains. When authorities found the truck abandoned the next day, they discovered a pipe bomb and ammunition in it. A search of his home uncovered a huge arsenal of explosives, ammunition and guns. He was indicted on federal weapons charges after his extradition back to Kentucky.

Outgoing mail is certified Virus Free.

Watching all those interesting commercials for hands-free operation of cell phones these days makes me wonder. They tell you to just tune into a certain station on your FM dial, and you'll hear your conversation perfectly... If that is the case, shouldn't it also be easy for a scanner to pick up that same FM signal? Has anyone tried this? Any idea what freqs are they using?

HEH!

i was thinking the same.

most likely you could buuut.. you'd have to be in a pretty well populated
area in order to hear a good number of conversations per day.

i would assume the transmitting range would be short.
the same goes for the number of which the signal is sent out. for example.
if a local station uses 87.7 (which is a frequency advertised for these
device[s]), wouldn't you theortically be listening to britney spears instead
of joe blow yammer to his wife?
or perhaps it would override the signal? i really am not sure.

> expensive?

Nope. $23 at www.pro95.com (BlackBag Software). I ordered mine in January, and it works flawlessly.

The free computer software is at http://www.starrsoft.com/freeware/Win95/default.asp .

An easier-to-read manual in HTML: http://marksscanners.home.att.net/95-1.html .

Answers to frequently asked questions: http://www.equisport.com/cgi-bin/pro93_95/faqmanager.cgi .

The online database of FCC frequency allocations is at http://svartifoss2.fcc.gov/reports/index.cfm . This will let you search for frequencies in your area. It's the same information that you'll find on the CD-ROM that comes with Police Call 2002.

To find trunked radio listings, you'll definitely want to visit L. C. Blanton's excellent trunked radio site at http://www.trunkedradio.net/ .

A nice accessory for your scanner is a pair of headphones. I bought a pair of KOSS SpeedZone monophonic headphones a few years ago, and they are great for listening when in public places (but see below), or to help you hear noisy or faint signals.

Earlier, you wrote:

> the guy at Radio Shack said I am allowed to take it with me [in the car] as long as I have a Ham Operator's license. Is that true? Does anyone know about the rules for my area? I live in Clarksville, IN right across the river from Louisville, KY.

Visit http://www.afn.org/~afn09444/scanlaws/index.html . It says that legislation was passed in Indiana in 2002 that makes it a Class B Misdemeanor to use a scanner -anywhere, at any time- unless you meet one of several exemptions. Some of these are:

a. Get permission from "written permission from the chief executive officer of a law enforcement agency".

b. Be "a person who holds an amateur radio license issued by the Federal Communications Commission if the person is not transmitting over a frequency assigned for police emergency purposes".

c. Use the scanner "only in the person's dwelling or place of business".

The same site says that similar restrictions are in effect in Kentucky.

For those who live in the UK I've posted a current list of Fairfield RAF's UHF/VHF frequencies. These were current as of Feb. 2003. The list can be found at http://www.milaircomms.com/war_iraq.html

George

With the scanner on,
Press Manual
enter the lowest range 118.0
<press down arrow.
enter 136.0
<press up arrow>
press 'search'

That should be the correct sequence as I remember on my 235XLT TrunkTracker.

These stupid liberal anti-war demonstrator fools don't realize
that they are playing right into the hands of Saddam and aiding
his cause. Every time he sees them on television he is laughing
and applauding there efforts for helping his cause.
They also don't realize the jeopardy they are possibly placing
themselves and others. All these crowds of demonstrators marching
down a street could be a prime target for some terrorists. Our
police and other law enforcement agencies are stretched to the
limit trying to defend against any possible terrorist attack, and
the last thing they need to be doing is trying to protect these
misguided idiot demonstrators.
They keep yelling and screaming about all the lives that will be
lost because of the war, they haven't the brains to figure out
that if Saddam and his sadistic sons are taken from power that
tens of thousands of lives will be saved from his torture chambers.
I am in full agreement that anyone can be for or oppose to the
war, but these stupid demonstrations by these simple minded
dumbbells are doing much more harm than good and I am sure Saddam
thanks them for their contribution to his cause.

Gentlemen, after reading all of these messages I think you both have lost sight of what "America" really is. In the societies of North America we can all say whats on our minds and live to see another day. We have all lived our whole live with freedom of speak and movement. We all take the right of our "Freedom" for granit, but the Iraqi people have no such idea what "freedom" is. Living in the kind of terror these people live with every day is not something we can comprehend. Knowing that your life could come to a very horrific end at any moment is beyond the meaning of having a "stressfull day". While we all sit around perpetuating idile conversation of the pro's and con's on this war, such as the UN has done for the last 12 years, thousands of Iraqi people have died at the hands of this tyrant. The UN is nothing more than a bunch of politicains sitting around making excuses and threats against each others and their countries. Have you even know two politcians to agree on anything? Well, fill a room full of them and do you honestly thing you could get a decision on where you should have lunch let alone save a country and who knows how many lives.
This war is about lives and people, theirs (Iraqi's) and ours. We could site around and discuss this till the fires of hell freeze, but the bottom line here is "freedom" and for that we would all lay down our lives.
There is an old saying, "you can please some of the people some of the time, but not all of the people all of the time."

Have a good weekend gentlemen.
And yes, I'm a Canadian and I believe Canada should be supporting and participating. But then the whimpy ass liberals who are in power don't agree with me either.

Source record: 34732

I have a feeling that these devices have very very low output, but if you tune to whatever frequency these things say to tune to as you drive to work (I think it's at the bottom of the broadcast FM band), it is very possible you will hear some cell phones.

These devices probably fall under the low power broadcast band FM device class, which allows unlicensed broadcasting in the typical FM broadcast band at very low powers. The kits are available online in many places.

I have my spare Pro-93 available on eBay.
Works like new. Minor signs of use.
Complete in original box with booklets, both battery holders and antenna.

When you use things, you manually tune to a freq that is not in use in your area. You can pick any freq on the FM dial. You just look for a clear spot.

not only i think its good many people on the DJ-X2000 think its good

what are you trying to do with the transweeper,most people dont use that,how many members of the public are bugged??????

but you can turn down the volume to get rid of the loud ear piercing noise.

the Flash tune however is much more useful,not as good as a normal counter/reaction tune,it is very much more nearfield,but it does work.

i used again succesfeully outside the Grosvenor Hotel in London,security out front transmitted on there radio,i had a little diamond stubby on the Alinco,and straight away 460.100 went into the Alinco,which i paired up with 453.600 the actual repeater output.

audio could be better,but on listening to an AOR8200 recently it appeared about the same,not only that the sensitivity was equal,the one that beat both on senstivity on uhf and vhf was the Icom R5,.

if when programming make sure you program in freq order as this really does make a differance on this set.

as for batter pack,supplied pack gave me 7 hours yesterday,of constant use with battery save on short setting,but you can imagine the amount of freqs i was scanning in central London.

btw sometimes the flash tune/counter does read wrong,but no one should use a counter at all,if they dont know there bands and freq splits,so if a freq registers at 481 Mhz you should know its wrong,if it does register wrong i move position/change aerials.

there are plenty of good radios for under £500,as all other handhelds are
under £500 i take it you dont rate any of them,the fact is most people will
use a handy for conveniance,but so far no one had produced one with all the
features,i would like,but the DJ-X2000 is the nearest i have found,then
followed by Icoms R2 or R5.

but all will have problems in various areas,but with wideband scanners then
thats only to be expected.

I don't think it's worth the money, since some of the functions don't
work.

>what are you trying to do with the transweeper,most people dont use that,how
>many members of the public are bugged??????

I was looking to see whether it could detect transmissions which I
know are there, such as a cordless phone. Transweeper plain doesn't
work. It keeps "finding" bugs at broadcast frequencies (FM radio, TV)
and it keeps finding false positives; it will find a bug at 431MHz (or
whatever) and then it will find that frequency all over the house, at
a distance of one meter. Obviously there cannot be bugs all over the
house on the same frequency at the same distance, right? Have you
tried Transweeper at all, a lurker told me in email he found the same
thing.

I heard that Transweeper is "listening for unit-generated audio on RF
as unit sweeps", so if the transmission is encoded in any way, then
the unit won't find it, is that right?

>the Flash tune however is much more useful,not as good as a normal

I can't get the flash tune to work. It just sits there for half and
hour or an hour with CHECKING displayed. When I try it in F.COUNTER
mode it finds frequencies all right, cellphone transmissions.

The Alinco can't even detect a cordless phone when it's physically
next to it, so it seems disappointing.

> the speaker.

For digital, you actually could say that there is a channel, if
multiple transmissions share timeslots on the same transponder.

I.e. with satelllite-TV, you have the analog signals, with one
channel per frequency. With digital TV, you can bundlle 4 or 8
channels on the same frequency by dividing the time between them.

With WiFi wireless LAN, channels = a number assigned based on the
middle frequency (they use multiple frequencies for one signal).

When you start looking at digital, there are many ways to do things.

m3 i cant help it if someone is not using the radio correctly

cordless phones are very low power,so not much chance of that being picked up on the counter or flashtune,also is your cordless phone digital or analogue,if digitial then no chance of picking up at all.

forget the transweeper,on counter it will randomly hover around 900 Mhz ,it is not picking mobile phones as again they are digital.

the whole point of both counter and flashtune is you go to say you local shopping mall,find a security guard,stand nearby with flash tune on,i always turn vloume down and normally place radio in inside pocket,wait till he speak for few seconds and see what is displayed on radio,sometimes it will misread and possibly show exactly double the actual freq,so if you see 945 displayed then divide by 2 and check the freq for audio,to confirm correct,this does happen if a lot of rf in the area or the tx power being used is quite high.

pmr446 500 MW on flashtune with stubby aerial 5/6 metres

typical pmr handled 1-5 w 11 metres plus

depending on rf in area

but if you are sitting at home expecting it to work then you will be saddened.

btw M3 the guy needs useful advice not sarcasm that offers no help,there are thousands of happy owners of the DJ-X2000 all across the world,it does not suit all as no radio base/mobile or handy will do that.

I think it makes it easy if you can scan from 88 - 108, and block out all
the FM radio stations in your scanner - then you are in the clear!

Let's see. Every Liberal I've ever talked to only seems to repeat that what
he has been told. Original thoughts from a Liberal usually boil down to,
"What day is it?" and, "Who does Helen Thomas hate today?".

From: Me <m@e.com>
Message-ID: <7p1s7vkcll7v86v00uajejv2u462efng85@4ax.com>
Source record: 34618

The biggest problem with the Pro-92 is that the latter models (B versions) are somewhat deaf up in the 800 band. Compared to the 235, this is the *only* problem. The 92 can, and the 235 can't:

- Trunk and conventional scan at the same time
- Use alpha-numeric labels
- Use CTCSS and DCS squelch decoding
- Use regular AA batteries
- Be programmed via computer

If you had said the 92 -vs- the 245, this would have been a harder decision. While the 245 will not do alpha-numerics, CTCSS/DCS, or use regular batteries, it is my *personal* opinion that the 300 channel 245 can beat the 500 channel 92 hands down any day!!!

Bugged? Not too many. Buggered? Now that would describe just about
all taxpayers.

If somebody is really worried about hidden transmitters, they need to
use a spectrum analyzer. There's no cheap substitute.

My cordless phone is digital so the transweeper won't work, if it only
detects normal unencoded analogue transmitters - that is the case,
right?

But I also tried the Alinco's radio field strength meter with the
cordless phone, and it didn't detect anything at all, even when held
right next to the phone. I don't think this radio is as brilliant as I
was hoping.

Along this line of thinking... What about the new cell phones with
that 'walkie-talkie' feature? I'm just curious as to how that
function works. Are they on normal cell frequencies or do they use
an FRS channel or something like that? Does listening to someone
using a phone's walkie-talkie feature constitute 'cellular
eavesdropping'?

If it happens to be that the cell phones are using common frequencies
for that feature, I wonder if the companies are telling their
customers that it is 'safe and private'.

Greetings,

The following article (with pix) can be found here:

http://www.aeronautics.ru/news/news002/news071.htm

I found it referenced on Rense.com. It is posted here

FWIW. All credit to "Venik".

Enjoy,

Andrew

Begin Post:

How military radio communications are intercepted?

March 21, 2003
www.aeronautics.ru

The US military is using SINCGARS (Single Channel Ground And Airborne Radio System) frequency-hopping radios in the field. These radio sets are categorized as Low Probability of Intercept (LPI) Frequency Hopping Spread Spectrum (FHSS) transceivers. The FHSS method is not new: it originated from the Second World War and, simply stated, it employs a narrow band carrier, shifting frequency in a pattern known only to the transmitter and the receiver. The frequency can be changed several hundred times per second.

The FHSS military radios are synchronized daily to use the same frequency modulation algorithm. The synchronization process occurs either through a direct physical connection of the radio sets to each other or to a special device known as the programmer. Some radios can also synchronize frequency modulation algorithms via an encrypted transmission of the frequency modulation algorithm in a non-frequency-hopping mode, although this method is generally considered to be less secure.

The military radios in the US armed forces commonly use encryption and the frequency hopping methods provide an additional layer of security during transmission of the encrypted signal. An example of a frequency-hopping field VHF/FM transceiver used by US Special Forces would be the Caracal RPM 4740 manufactured by Thales Communications of France.

The Caracal covers the 30 to 87.975 MHz frequency range. It also has 10 programmable simplex or half-duplex channels out of its repertoire

of 2,320. Hopping in narrowband (6.4 MHz) and wideband (30 to 87.975 MHz) orthogonal modes, Caracal contains high-grade internal digital encryption and has an output of 1 W. Insertion of frequency and security codes is accomplished using the MA 4073B programmer or MA 4083B fill gun. A reset switch on each radio is used to erase codes rapidly. The synchronization function is broadcast, requiring about 6 seconds. Other features include receive-only selective calling, frequency barring and `hailing' by fixed-frequency radios when in the hopping mode.

However, security afforded by frequency-hopping methods is very dependant on the strict adherence to protocols for operating such radios. The US troops and other operators of frequency-hopping radio sets frequently disregard these protocols. An example would be an artillery unit passing digital traffic in the frequency-hopping mode, which would enable an unauthorized listener to determine the frequency-hopping algorithm and eavesdrop on the transmission.

Even when proper protocols for using frequency-hopping radios are being adhered to interception and decryption of these signals is still possible. The frequency-hopping interceptors are special advanced reconnaissance wideband receivers capable of simultaneously tracking a large number of frequency-hopping encrypted transmissions even in high background noise environments.

An example of such a reconnaissance device would be the FH-1 frequency-hopping interceptor manufactured by VIDEOTON-MECHLABOR Manufacturing and Development Ltd of Hungary. The FH-1 frequency-hopping interceptor is a modern reconnaissance system based on parallel signal processing technology.

The equipment has 160 independent receiving channels covering a 4 MHz wide IF band with 25 kHz channel spacing, 60 dB channel selection and 60 dB intermodulation suppression. The 4 MHz wide IF band is the IF output of a special high-speed front-end receiver which has a 20 to 1,000 MHz frequency range.

The digitized output signals of the channels are multiplexed and fed as 1 Mbits/s data to a fast dedicated signal-processing computer. As the processing time of the 160 channels is 200 ï¿½s with the front-end receiver 4 MHz frequency setting time, the processing speed of this interceptor is 4 MHz/200 ï¿½s or 20 GHz/s. This high speed makes it possible to process the complete 30 to 80 MHz ground-to-ground VHF band within a 2.5 ms time slot.

The system's processing algorithm filters out noise spikes and stationary transmissions and in this way hopping transmissions can be classified either in the traditional frequency versus amplitude mode or in a waterfall-like frequency versus time display mode. Optional software modules are available for direction-finding the FH transmission and for controlling a remote follower/jammer.

End Post.

Your right....especially when it means I have to like butt pirates and all that breeds. Oh and lets not forget about 'gun control'. Hey I tried to buy a gun on Sep 12, 2002....None to be found. Can you say Hypocrite?

The thing about conservatives is we know the difference between right and wrong. Decent and bad. Good and Evil. And yes we do tend to stick with what works. You should try it. Maybe you wont screw up the next generation if you do.

Dave and Richard,

Thanks very much. The antenna cable is connected to 50 Ohms
connector of the ant-1 of R-5000. Today I was able to listen
to 5598 fairly clearly. I'm also seeking suggestions on what other
frequencies I can try in Boston. The other frequencies I try
are 5616, 5649, 8879 and 8891.

No criticism here... As long as they realize that they're right to throw
their fist ends at my nose.
Protesting is FINE as long as it doesn't tread on the rights of others and
many of the protesters have forgotten that.
They don't get to attack police, (or anyone else for that matter) or damage
property. When they cross the line all bets are off and THEY become the
criminals.

I criticize many of them for their behavior.... out here in
California many of them are damaging public and private property,
vandalizing cars, public works, etc, and creating a vast nusiance to
those of us who are trying to go about our business.

They are also syphoning off a substantial portion of public safety
manpower which is needed for both public safety and homeland defense.

yep, better to save the loonies and head down across the line and grab a
BC780XLT.

That is if you're no further north than 160 km from the border.

You'll pay only GST when you arrive at da borda. Some of the U.S. stores
won't ding you their state taxes
if you show your Canadian ID. The place I went to was nice enough to pass on
the state's sales tax.

Forget the cost of the trip going down there. Enjoy the U.S.A. in your
Chevrolet.

I don't think the right to protest is the issue. The protestors are
criticized because how could any intelligent, clear-thinking individual not
think it's a good idea to get rid of a baby-killing mass murderer who has
violated U.N. resolutions and may very well be supplying weapons of mass
destruction to terrorists who will kill Americans?

The difference between good and evil? So then if you truly think you know that difference, why is it that your people don't support a war with Iraq? Saddam is evil, right?

>yes we do tend to stick with
> what works. You should try it. Maybe you wont screw up the next
generation
> if you do.

Think about what the world would be like if everyone thought that way. There would be no America (except for natives). Back in that time most people thought there was no America. But they changed their ideas. You don't want the world to have the same ideas and technology as today in 50 years, do you?

Thousands of the Iraqi people are dying this week - and it is not "the tyrant" killing them.

Source record: 34547

I understand their right to protest, but what are the protesters hoping to do. Bush doesn't care if a city has a protest. The troops are over in Iraq, and that won't change for a while. Don't you think we should support them?

From what I've heard, these are standard analog transmissions with the Nextel system, so if you find the frequencies, you should be able to listen in.

The 600 at gitmo are not soldiers, they're terrorists.

And in Iraq they're executing our soldiers, and showing it on TV.

So are you a student, or a teacher?

And why do you seem to prefer Saddam to President Bush?

I think you're wrong about the people at Guantanamo. They are
soldiers, without question, just for a different cause/country.

Hate to break it to you, but there are *much* worse people than Saddam
out there, a lot of them are either too powerful for the US to tackle,
or have broken to our will and are too useful at the moment to destroy
just yet. Saddam had the bad luck of having previously angered the US,
and then on top of that being in possession of resources which we
would like to get our hands on, but couldn't do so without breaking
our own sanctions against him. I think the WMD reason for going to war
with Iraq is, besides hypocritical, a crock of shit because of the
number of other countries who could possibly have nuclear or
biological weapons at their disposal, and pose a greater potential
threat to the US, and would hence make better targets.

It's not "exactly" like it... from a visual inspection, the TI cable is terminated with a stereo
plug, while the PRO-95 cable is mono.

The TI GraphLink cable is not compatible with the PRO-95. The TI cable is not a "serial" cable in
the common sense.

Usual problem somebody reversed to polarity.

Component at U13 has exploded.

Can anybody point me to a schematic or diagram for this
?

Alternatively can you tell me what the part is. ?

Or I suppose a repairer in the UK might be an option.

I am after a small base scanner for airband use. I can pick up a used PRO-2066 pretty cheaply. I was wondering how well this scanner works on the airband?

Would a 2053 or a 2067 be a better option?

Thanks all.

AC, (One More IH*3)

The Geneva Convention (International Law) set forth the term
"Un-Law-Ful Combatants" and describes what they are in-fact as a point
of law by treaty.

Those individuals that are currently being held at Guantanamo Bay are
so 'categorized' as "Un-Law-Ful Combatants" by the USA Government.
Even the 'most holly' French Government has not place a 'question'
before the World Court or the International War Crimes Tribunal to
bring this matter up for judicial interpretation.

God {Allah} Bless Our American Fighting Men and Women -Amen

May God's {Allah's} Strength, Kindness, Mercy and Wisdom 'abide' with
America's Leaders - Amen.

~ RHF

Not that simple. As soldiers with no nation state sponser they
are more similar to pirates then soldiers.
For an overview of why POW status does not aply, and why
we, the USA, can hold, and then try by military tribunal see:
http://writ.news.findlaw.com/dorf/20020123.html
And for the complete "Rules and conventions of land warfare":
http://www.asociety.com/geneva1.html
But I will warn you the complete convention is not light reading.
In short becuase of the way they operated in Afgansistan, we can
damn well do whatever we like to these pirates. A quick tribunal,
a blindfold, a short fall with a rope to stop them and they get
to go straight to paridise.
If you don't like it, you might warn other warriors for god that
if they fail to meet the requirements set forth in the convtentions,
they too can be treated like pirates.

Hello all,

My PA-SitRep website features a PA County Map whereby visitors may click on an particular County in the Commonwealth to get basic emergency communications information for each County.

Here's the address for the clickable map:
http://www.pa-sitrep.com/#MAP

I've made great progress over the last several years with this project but I still need a lot of fills.

If you think you may be able to provide emergency communications information for a particular County in PA (i.e. ARES/RACES repeaters, County EMA freqs and or web addresses, etc.), please take a moment to check out the map and see if you have any information to add to any of my PA County pages.

I'm also always looking for more PA-SitRep Contacts (scanner enthusiasts are a perfect fit). Here's where you can learn more about the PA-SitRep Contact project:
http://www.pa-sitrep.com/contact.htm

PA-SitRep is a Pennsylvania Emegency Communications information website and is a 100% volunteer/non-commercial project.

tnx es 73

1059. Live Military Broadcasts – Florida Areas are Hot!

Newsgroup: rec.radio.scanner
Date: 2003-03-24 14:36:24 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3E7F17E8.9090705@licensed4fun.com>
Source record: 34575

Its Monday morning and the MOAï¿½s, Warning Areas, and Ranges are all open for business. Been lots of Mil Comms today and weï¿½re broadcasting live at http://www.MilAirComms.com

This evening as weï¿½ve done before weï¿½ll replay todayï¿½s activities for the benefit of those who work and never get to hear an active weekday afternoon. During the replay there will be no breaks between individual comms as its recorded using a VOX recorder. A VOX recorder only records voice, not the dead air between transmission. The rebroadcast will start at about 2000 hrs EST unless there is still Live comms happening in the area.

George

Hi Celt Chic,

If you haven't already, join these Yahoo! user groups:

http://groups.yahoo.com/group/PRO-95owners/

http://groups.yahoo.com/group/PRO-93_95/

You can search the message archives and find answers to many of your questions. Be sure to look in the "Files" section to see if someone has uploaded a file containing frequencies for your area.

I've had a Pro-95 since October and love it - great scanner. The advice you've read about getting the software and a cable is very good - programming by hand will take forever. The site for the free (and extremely good) software is:

http://www.starrsoft.com/freeware/win95/

You'll probably find that it takes slightly longer to get used to your scanner then your shortwave, but it's really pretty easy once you understand the basics.

Enjoy!

-sam

These people are nothing more than 'adult' children throwing a temper tantrum because they didn't get the red truck they wanted, so they start lashing out and breaking things.

I guess they never got a good spanking when they were young (can't say children, because they never really grew up).

They haven't yet figured out that rather than acting like spoiled brats, they could organize into a political action group and lobby the government for change using our system of government. We all know that Congress pays attention to masses of voters with a common viewpoint.

And an additional thought from Charlie Daniel's:

February 24, 2003
An Open Letter To The Hollywood Bunch
Ok let's just say for a moment you bunch of pampered, overpaid, unrealistic children had your way and the U.S.A. didn't go into Iraq.
Let's say that you really get your way and we destroy all our nuclear weapons and stick daisies in our gun barrels and sit around with some white wine and cheese and pat ourselves on the back, so proud of what we've done for world peace.
Let's say that we cut the military budget to just enough to keep the National Guard on hand to help out with floods and fires.
Let's say that we close down our military bases all over the world and bring the troops home, increase our foreign aid and drop all the trade sanctions against everybody.
I suppose that in your fantasy world this would create a Utopian world where everybody would live in peace. After all, the great monster, the United States of America, the cause of all the world's trouble would have disbanded it's horrible military and certainly all the other countries of the world would follow suit.
After all, they only arm themselves to defend their countries from the mean old U.S.A.
Why you bunch of pitiful, hypocritical, idiotic, spoiled mugwumps.
get your head out of the sand and smell the Trade Towers burning.
Do you think that a trip to Iraq by Sean Penn did anything but encourage a wanton murderer to think that the people of the U.S.A. didn't have the nerve or the guts to fight him?
Barbara Streisand's fanatical and hateful rankings about George Bush makes about as much sense as Michael Jackson hanging a baby over a railing.
You people need to get out of Hollywood once in a while and get out into the real world. You'd be surprised at the hostility you would find out here.
Stop in at a truck stop and tell an overworked, long distance truck driver that you don't think Saddam Hussein is doing anything wrong.
Tell a farmer with a couple of sons in the military that you think the United States has no right to defend itself.
Go down to Baxley, Georgia and hold an anti-war rally and see what the folks down there think about you.
You people are some of the most disgusting examples of a waste of protoplasm I've ever had the displeasure to hear about.
Sean Penn, you're a traitor to the United States of America. You gave aid and comfort to the enemy. How many American lives will your little, "fact finding trip" to Iraq cost? You encouraged Saddam to

think that we didn't have the stomach for war.
You people protect one of the most evil men on the face of this earth and won't lift a finger to save the life of an unborn baby. Freedom of choice you say?
Well I'm going to exercise some freedom of choice of my own. If I see any of your names on a marquee, I'm going to boycott the movie. I will completely stop going to movies if I have to. In most cases it certainly wouldn't be much of a loss.
You scoff at our military who's boots you're not even worthy to shine. They go to battle and risk their lives so ingrates like you can live in luxury. The day of reckoning is coming when you will be faced with the undeniable truth that the war against Saddam Hussein is the war on terrorism.
America is in imminent danger. You're either for her or against her. There is no middle ground.
I think we all know where you stand.
What do you think?
God Bless America

I do want to get it and I was going to get it anyway because I'm interested
in becoming a ham. I'd like to study for it without spending lots of money
so I'm going to surf the web and see what's out there in the line of online
study pages. I'm sure learning Morse is going to be a pain, but a friend
said you only have to learn five words/min.

Hi Wayne,

Thanks for the nice set of links and for posting the scanner law for my state. So far I've used it only in my house, but I'd like to take it to work with me to listen with headphones at my desk, and I'd hate to get pulled over with one in my car! I don't have a trunk to put it in, either, because I drive a Jeep Wagoneer so they'd probably definitely give me a ticket for having it in my car. :(

I have the new Uniden 250d scanner and I am having a problem hearing the transmissions. I have programed the control channels for both Fire and police and I am able to identify all the call groups. For some reason I only hear the first syllables of a conversation and cannot hear the whole conversation. I have tried to adjust the sound quality and have had some improvement but I still cannot hear the total conversation. Does anyone have any suggestions?

You can start a little earlier with a technician class "no-code" license.
This won't provide you access to the bands below 30mhz but it's a good way
to start out, and very easy to get (easier than some hams would like).
Pick up the book at radio shack for $10-$15 dollars, it lists all the
multiple choice questions that they are allowed to ask you, and all the
answers. Study it and you'll have no problems, and it will allow you to
carry a scanner in your state.

Ben

5 words/min = 12 seconds/word. The reference word is Paris.
.--.ï¿½.-ï¿½.-.ï¿½..ï¿½...
This is 14 key-presses, so slightly faster than 1 press
every second. It means you need to be fluid in your keying.

You can listen to morse at 5 wpm and other speeds here:
http://www.soton.ac.uk/~scp93ch/morse/index.html

> something.

True, but what should happen if we wait for Iraq. Do they need to bomb us
and kill MILLIONS for us to react, or should we take them out before they
are able to do this? If a person pulls a gun on an officer, the officer will
shoot before they get shot at.
That is what America is doing, being the officer.

With those 1000 channels you'll want to use the PC to set them up. I lost all 200 channels in my Pro-51 recently when a buddy unplugged the AC adaptor while it was running. 1500 some keystrokes later, I got most of them back. :-(

The cityfreq site is great for outstate/camping freqs like DNR, local sheriffs dept,ect.
I have my "cabin" banks set for sheriff, local cops, DNR/game warden. FRS/GMRS to get local hunting,fishing hotspots.

Looking for the owner's manual for the Realistic PRO 31. I tried downloading it from Radio Shack's web site but it didn't work. Anyone know where I can find it??

Thanks!

Robert

Some people can stick their head in the sand and ignore the thousands Sadam has killed, but I do not. Now he's killing our POW's. That's a class guy you're defending.

What do you want to give the 600 prisoners? Just because they don't have TV, internet access and a 3 course meal doesn't mean we violate any laws. They are probably being treated better than a murderer in life sentence.

Not just the manpower, but the resources - literally millions of dollars to pull law enforcement and other officials away from their duties - mainly, especially now, in the arena of terrorism.
There are those that are just cooks and anarchists - nothing will change that. And those are the criminals. For people who claim to abhor the "violence" and the USA pushing "our ideas" on others, what the fuc* do they think THEY are doing? Imposing their ill-informed ideas, and needless violence and property damage on their OWN society.
Don't let these sub-humans disturb you. They are irrelevant...

Well, he's not just "suspected" of using chemical weapons on the Kurds,
killing thousands of them.
Not just speculation that he has banned weapons - he's already used SCUDs
(Russian made, incidentally, along with the Russian made arms and Russian
advisors - weapons that were shipped, against UN sanctions.)
Not just suspected of ethnic cleansing. Not just suspected of killing those
that would disagree with him - along with their families - wives and
children.

<sigh>
You REALLY don't know the difference?
Does the US sell WMD to terrorists? Point them at their neighbors? Did we have to USE our arsenal to bring down the Soviet Union? Did you go to school beyond the third grade?
How do you figure any troops know anything about the "true story"? They know this:
1) They are all volunteers
2) They follow orders.

The first applies to the US troops. The second applies to both.

What's important to remember is that it's not a war against the Iraqi
PEOPLE - we (the allies) have made it a point to secure Iraqi resources for
the Iraqi PEOPLE.
It is because of the respect for human life and the conventions of war that
those American prisoners find themselves in the position they are in - they
accepted the white flag as a surrender, and were then attacked - indeed,
several executed.

....so much for "secure" military communications ???

clik: http://www.aeronautics.ru/news/news002/news071.htm

March 21, 2003
www.aeronautics.ru

The US military is using SINCGARS (Single Channel Ground And Airborne Radio System) frequency-hopping radios in the field. These radio sets are categorized as Low Probability of Intercept (LPI) Frequency Hopping Spread Spectrum (FHSS) transceivers. The FHSS method is not new: it originated from the Second World War and, simply stated, it employs a narrow band carrier, shifting frequency in a pattern known only to the transmitter and the receiver. The frequency can be changed several hundred times per second.

The FHSS military radios are synchronized daily to use the same frequency modulation algorithm. The synchronization process occurs either through a direct physical connection of the radio sets to each other or to a special device known as the programmer. Some radios can also synchronize frequency modulation algorithms via an encrypted transmission of the frequency modulation algorithm in a non-frequency-hopping mode, although this method is generally considered to be less secure.

The military radios in the US armed forces commonly use encryption and the frequency hopping methods provide an additional layer of security during transmission of the encrypted signal. An example of a frequency-hopping field VHF/FM transceiver used by US Special Forces would be the Caracal RPM 4740 manufactured by Thales Communications of France.

The Caracal covers the 30 to 87.975 MHz frequency range. It also has 10 programmable simplex or half-duplex channels out of its repertoire of 2,320. Hopping in narrowband (6.4 MHz) and wideband (30 to 87.975 MHz) orthogonal modes, Caracal contains high-grade internal digital encryption and has an output of 1 W. Insertion of frequency and security codes is accomplished using the MA 4073B programmer or MA 4083B fill gun. A reset switch on each radio is used to erase codes rapidly. The synchronization function is broadcast, requiring about 6 seconds. Other features include receive-only selective calling, frequency barring and `hailing' by fixed-frequency radios when in the hopping mode.

However, security afforded by frequency-hopping methods is very dependant on the strict adherence to protocols for operating such radios. The US troops and other operators of frequency-hopping radio sets frequently disregard these protocols. An example would be an artillery unit passing digital traffic in the frequency-hopping mode, which would enable an unauthorized

listener to determine the frequency-hopping algorithm and eavesdrop on the transmission.

Even when proper protocols for using frequency-hopping radios are being adhered to interception and decryption of these signals is still possible. The frequency-hopping interceptors are special advanced reconnaissance wideband receivers capable of simultaneously tracking a large number of frequency-hopping encrypted transmissions even in high background noise environments.

An example of such a reconnaissance device would be the FH-1 frequency-hopping interceptor manufactured by VIDEOTON-MECHLABOR Manufacturing and Development Ltd of Hungary. The FH-1 frequency-hopping interceptor is a modern reconnaissance system based on parallel signal processing technology.

The equipment has 160 independent receiving channels covering a 4 MHz wide IF band with 25 kHz channel spacing, 60 dB channel selection and 60 dB intermodulation suppression. The 4 MHz wide IF band is the IF output of a special high-speed front-end receiver which has a 20 to 1,000 MHz frequency range.

The digitized output signals of the channels are multiplexed and fed as 1 Mbits/s data to a fast dedicated signal-processing computer. As the processing time of the 160 channels is 200 µs with the front-end receiver 4 MHz frequency setting time, the processing speed of this interceptor is 4 MHz/200 µs or 20 GHz/s. This high speed makes it possible to process the complete 30 to 80 MHz ground-to-ground VHF band within a 2.5 ms time slot.

The system's processing algorithm filters out noise spikes and stationary transmissions and in this way hopping transmissions can be classified either in the traditional frequency versus amplitude mode or in a waterfall-like frequency versus time display mode. Optional software modules are available for direction-finding the FH transmission and for controlling a remote follower/jammer.

Venik

I see. Human Rights only apply to
the people that you want to apply them to?

they are not executing your soldiers, mate, so relax.

Student? Teacher? Both, Son..

Prefer Saddam? Are you kidding?
But If you need a couple of Ex-Canadian Army extraction
specialists to nip into Iraq, to grab Saddam alive
and kicking, I can make a few calls... :-)

I think that your boys and girls have it under control.

God bless,

I think in some circles, the American Boys
and Girls, being held by the Iraqi's
are considered illegal combatants....

That is not my opinion, but I think
that they (IRAQ) may hold that
opinion..

Think about it.
Geneva convention notwithstanding..
How would you treat an IRAQI
invading New York???

I know exactly what you would do.
You would send them to Guantanamo Bay, Cuba
to rot.

Personally, I pray for a safe return
for the American boys and girls.

God Bless 'em.

1113. newbie trunking question

Newsgroup: rec.radio.scanner
Date: 2003-03-25 04:54:47 UTC
From: Celt Chic <internetstuff47129@yahoo.com>
Message-ID: <riRfa.27984$S%3.1644725@bgtnsc04-news.ops.worldnet.att.net>
Source record: 34529

Hi everyone,

I'm sure everyone is going to sigh in boredom when they hear this question, but I just bought a Pro-95 Scanner and I'm completely lost to the whole trunking thing. I've read the manual three times, I've checked out trunking web sites, and even read a site that pretty much rewrote the manual. None of these help. I think my brain is in a stage of rot. Can someone start me off from the beginning, say, by teaching me how to program a basic Mot II trunking system in my scanner? What all do I need to do? Please give it to me step by step, and maybe then I can advance on to Edacs, and then possibly to Mot I where it also requires fleet maps. They need a trunking book for dummies because I really have no clue and would appreciate the most basic help I can get.

For example, here is a set of frequencies that is published on the trunkedradio.net for Radioland in Floyds Knobs, IN. What would I do with it starting from the beginning?

System Name: Radioland 900Mhz (Indiana)
Location: Floyds Knobs, IN
County: Floyd
System Type: Motorola Type II Smartzone
Last Updated: 03-16-02 17:01
Hits: 14

System Frequencies
Site Description Freqs
001 Site-1 936.6875 936.7125 936.7250 936.7375 936.7500 937.6375 937.6500 937.6625 937.6750 937.6875

Thanks so much! Once I get the hang of this I know I could do everything else on my own!

Another question, do all of the trunked systems have to start on channel 00 in the banks, or can I have multiple trunked systems in the banks? I believe I can only have motorla in one band and edacs in another, but can I have multiple systems in each bank? For instance, since edacs must be in order, can I have 12 frequencies of edacs starting from channel 400 going to channel 411, and then have another edacs system starting from channel 412 to channel 430?

Muchas gracias!

Step one: Go to http://cityfreq.com and get a list of frequencies for you
town.

Step two: To be sure you have a trunking system with in reach, go to
http://trunktracker.com and get the frequencies.

Step three: Enter each of the 8 or 10 frequencies listed, setting the mode
of each to the proper system i.e. Motorola.

Step four: Scan and listen. As each of the conversations takes place, at the
bottom of the screen you will see MOT 1130 or MOTXXXX these numbers are the
talk group, you may add a tag so that instead of 1130 it will read Mytown
Police.

Next go to http://www.starrsoft.com/freeware/win95/default.asp
get the free software and then proceed to
http://www.pro-95.com/ and get a cable.

This will allow you to set everything up in easy format, add labels, etc and
upload it to the scanner.

Hope this helps.

I know this will sound way too simplistic, but get the cable and the
software.
I had owned at least 10 scanners before got my first trunking one and
believe me it is a whole new world of programming. I needed the cable
and software.
Find some conventional frequencies and go ahead and put them in one bank
so you will at least have something to listen to until the cable gets
delivered. Put your local airport frequencies in another bank.
Download WIN95 from;
http://www.starrsoft.com
and load it into your computer.
Start putting trunked groups into it so when the cable gets there all
you have to do is upload.
On trunked group per bank.
Motorola starts with 0
Edacs starts with 1 and have to be in logical order
You can put conventional frequencies in the same bank with a trunked
group if you want to listen to them at the same time.
Enjoy,
Bob

Pick a bank, and enter the above frequencies into it, starting at location 0 in the bank. Use the procedure at
http://marksscanners.home.att.net/95-4.html#Programming_a_Motorola_Type_II_System to do this.

After doing that, scan using the procedure at
http://marksscanners.home.att.net/95-5.html#Trunking_a_Trunked_Bank .

> Another question, do all of the trunked systems have to start on

> edacs starting from channel 400 going to channel 411, and then have
> another edacs system starting from channel 412 to channel 430?

For EDACS, you can truly have only one trunked system per bank, because each EDACS system has to be stored starting at Channel 1, not 0, in that bank.

For Motorola, you can program multiple trunked systems into a bank, but the scanner will only track the first one that it can hear. (It starts at Channel 0 in the bank, and scans upwards.) This might be useful if you travel around, where only one of the systems you programmed into the bank is in range at any given time.

Another clue: for Motorola, you really only have to program the _control_channel_ for the system. This is the one that sounds like a diesel engine running. The PRO-95 will automatically figure out which frequency is carrying the voice at any given time, and will switch to it and display it, even if you haven't programmed that frequency into the bank! This is a big improvement over earlier trunked scanners, such as the PRO-91. To find control channels, you can use the SEARCH mode to scan up through the Police/Fire bands where trunked systems are likely to be found, or use a limit search for a specific range of frequencies. Ignore voice transmissions, and listen for the diesel engine sound instead. When you find one, use FUNC ENTER to store it into an empty bank instead, and then go change the mode of that bank to Motorola, and the mode of the frequency you just stored to

Motorola. In manual mode, when listening to that channel, you should hear the diesel noise, and the scanner should say MOT: CTRL. Scan that bank, and you'll start hearing any voice traffic for that trunked system. :) You can then look up the control channel frequency in trunkedradio.net to find out what system you're listening to, and whether you need to make it Type I instead of Type II, etc.

Warning: Motorola systems (and EDACS systems) often rotate the control channel among several frequencies, typically changing to a new frequency at midnight. So you have to program all of the control channel frequencies into the bank if you want to stay with the system. The frequencies used by the control channel will be among those listed on trunkedradio.net for that system.

Here is the info on the 2066, it does not cover the mil-air band.
26.965-27.405 MHz (in 5 kHz steps)
29.000-54 MHz (in 5 kHz steps)
108-136.975 MHz (in 12.5 kHz steps)
137-174 MHz (in 5 kHz steps)
406-512 MHz (in 12.5 kHz steps)
806-823.9375 MHz (in 12.5 kHz steps)
851-868.9875 MHz (in 12.5 kHz steps)
896.1125-956 MHz (in 12.5 kHz steps)

I bought Radio shacks "Police Call Freq. Guide" (9) and can't say enough good things about the book.

The CD that came with it is great, it covers all of the USA and also has a "short wave" guide.

The only drawback is the size of the print in the book. With these old eyes it's a little hard to read.

If these guys are real POWs and not UC/pirates then yes the Geneva Convention
does allow them to have tobaco products. From talking with a former POW
(WWII) who said even the Germans allowed our guys to smoke. Outside
and away from the barracks.
But to me these guys fall outside the protection of the GC because
they were not regular soldiers. Thier lack of uniform, command structure,
or lack of it, and the lack of a nation state place them in the same
group as pirates. The GC only cover soldiers who are in the army of
a recognised state. The Taliban was only recognised by Pakistan.
Therefore Taliban warriors are not soldiers but memebers of a large gang.
They should have been tried at the rear edge of battle and hanged by the
neck until dead. Bullets would have been waste of resources.

http://scanpix2.home.att.net/BC/bc210xlt.jpg
http://scanpix2.home.att.net/BC/bc210xw.jpg

Appears to be a 210, 210XL, 210XLT, and a 210XW.

I have two 210XL radios, one requires a slight offset to get UHF frequencies intelligibly. Other then this (does anyone know how to tweak the UHF section of the 210XL?) the radio are great.

I live in an area saturated by RF interference. I just bought the Uniden 785D, which suffers from intermod, as does my Yaesu and Alinco handhelds. Funny thing is that the 210XLs have no problem with intermod, at least on the frequencies that I use. (around 450MHz).

Is it me, or are radios becoming progressively poorer made, therefore more susceptible to intermod?

Which relatively recent models of radio have high intermod resistance, which radios are models to avoid?

Regards.

Wow! Unless something has radically changed, AFAIK there are plenty of
drawbacks:

1) No CTCSS or DCS tones listed.
2) Very limited Federal info
3) Licensed frequencies only, no discreet police freqs, etc.
4) Lack of telemetry freqs
5) Not enough different ways to search (ie by lat/long, TX city/licensee
city, service,
no of mobiles, etc)

And your point is? By stating that the 'West' forces its ideas on the rest of the world by force of arms means nothing. That is the history of the world. It is what we humans are best at.

Im just glad I live in the country that has the biggest and the best. And for once in a LONG TIME is willing to use it.

We didnt start this little war. The ragheads did. Now its time for a little payback.

And that is why the "non-Westerners" have been beating a path to
our door for the last 100+ years. All of them looking for that
"freedom" that other countries seem to lack.

I am just after civil airband (108-137 MHz), in particular ACARS reception.

Mike. Here is the info: Moyer Electronics has 3 stores:

758 North locust Street
Hazleton, Pa.18201
570-455-3631

310 North Second Street
Sunbury, Pa. 17801
570-286-6707

330 East Norweigian Street
P.O. Box 1164
Pottsville, Pa. 17901-7164
570-622-7866

Hope this info helps. Hazleton looks the closet from Wilkes Barre. Use
Mapquest for directions. I could try but might confuse you. You take
the West Hazleton exit off the interstate 81 South. Nick

And you suppose that 30 more years of his reign over those people is actually going to be one of peace, love, and understanding. Hardly the fact when you consider the past 30 years of his bloody rule. Actually longer than that considering that he first gained prominence in the coup of Al-Bakr back in 1968.

Religion itself *never* won a war, even if there are those who think it did.

"superiority in applying organized violence"? Of course! But did you honestly think that we "won the
world" with UNorganized violence?

And what do you mean by "won the world"? The world is a very large place and does not belong to any
one country (or person).

Before you go tossing around words, like "Westerners", I suggest you try studying American history and
finding out all you can about it, instead of the propaganda you have obviously been reading. I live
in the GREAT! country of the United States of America, and if you want to include me in your label of
"Westerners", that's up to you - BUT DON'T! - because you are wrong to assume that "Westerners" means
all of us from the 'west'. Personally, I have never tried to win the world through any means. And
what one "Westerner" thinks may not be what another "Westerner" thinks. That's what "America" is all
about - the freedom to choose, or not choose, or choose whatever way you desire (within reason).

Steve

P. S. The name of this newsgroup is "alt.ham-radio.vhf-uhf",
not "alt.the.netherlands.vs.westerners".

Greetings.

Have above scanner, works fine tracking my EDACS systems at home (Orange County, NY). I've been recalled by Uncle Sam to Norfolk, VA, having no luck getting Norfolk and Va Beach hybrid trunking systems to work (no problem with Portsmouth's system). Is 245's ability to track hybrid's overrated, or am I programming Fleet Maps incorrectly, or making other error (i.e. should I use E2-800 versus E1 Usr, etc...).

TIA,

LJD

Hello !

I am hearing a LOUD, very strange signal between 432.1 and 432.7 or so here in the Ottawa, Ontario, Canada area. Been on for about 30 minutes now (0137 UTC).

Here is a recording (SSB mode on radio):

http://members.rogers.com/tomzinck/ham/jammer.mp3

Radar?

Never heard it before.

Ok, I have a control channel programmed into a bank. However, now when I scan, it always stops on the channel with the diesel sound and stays there. How can I get it to pick up voice transmissions without always having to stop on the control channel during a scan?

Thanks,

Pick a bank, and enter the above frequencies into it, starting at location 0 in the bank. Use the procedure at
http://marksscanners.home.att.net/95-4.html#Programming_a_Motorola_Type_II_System to do this.

After doing that, scan using the procedure at
http://marksscanners.home.att.net/95-5.html#Trunking_a_Trunked_Bank .

> Another question, do all of the trunked systems have to start on

> edacs starting from channel 400 going to channel 411, and then have
> another edacs system starting from channel 412 to channel 430?

For EDACS, you can truly have only one trunked system per bank, because each EDACS system has to be stored starting at Channel 1, not 0, in that bank.

For Motorola, you can program multiple trunked systems into a bank, but the scanner will only track the first one that it can hear. (It starts at Channel 0 in the bank, and scans upwards.) This might be useful if you travel around, where only one of the systems you programmed into the bank is in range at any given time.

Another clue: for Motorola, you really only have to program the _control_channel_ for the system. This is the one that sounds like a diesel engine running. The PRO-95 will automatically figure out which frequency is carrying the voice at any given time, and will switch to it and display it, even if you haven't programmed that frequency into the bank! This is a big improvement over earlier trunked scanners, such as the PRO-91. To find control channels, you can use the SEARCH mode to scan up through the Police/Fire bands where trunked systems are likely to be found, or use a limit search for a specific range of frequencies. Ignore voice transmissions, and listen for the diesel engine sound instead. When you find one, use FUNC ENTER to store it into an empty bank instead, and then go change the mode of that bank to Motorola, and the mode of the frequency you just stored to Motorola. In manual mode, when listening to that channel, you should hear the diesel noise, and the scanner should say MOT: CTRL. Scan that bank, and you'll start hearing any voice traffic for that trunked system. :) You can then look up the control channel frequency in trunkedradio.net to find out what system you're listening to, and whether you need to make it Type I instead of Type II, etc.

Warning: Motorola systems (and EDACS systems) often rotate the control channel among several frequencies, typically changing to a new frequency at midnight. So you have to program all of the control channel frequencies into the bank if you want to stay with the system. The frequencies used by the control channel will be among those listed on trunkedradio.net for that system.

Yes, you may enter frequencies beyond those normally entered via keyboard. That being said, a caveat is in order, the internal filters can cause the signal to be attenuated severely.

A good example is the Military Air Band. You can enter 331.5, but the internal filter ends at 225.0. Signals above 225 are almost impossible to pick up.

Another case is an unavailable mode, for example you can enter "Rock 93" but because wideband FM is not an available mode, you can't listen to it.

Be careful, because of voltage differences, many of the cables that worked fine on the Pro-93 will not work on the Pro-95.

Well good news/bad news. You can program frequencies that are outside of the ranges in the scanner manual. The downside is they are not very sensitive. I have programed in UHF military air and only receive really strong signals from planes nearby. The cellular freqs can be programmed but the scanner will not pick them up. I still think this is one of the best scanners around and the best buy for the money.

Hi,

Trunked Systems can fall under other bands of frequencies, too.

I don't know if there is a "defined range" of frequencies where
different trunked systems reside, but there are different frequency
ranges where trunked systems can be found.

DJ-X3... Sucks life out of batteries fast.

I put in fresh batteries 20 minutes later low battery icon comes on.

Sometimes when i scan it will turns off in the middle of a scanning and turns back on.

However i have no problem with the DJ-X3 when i use an adaptor I'm still learning it's functions.

Also when i check the batteries on the tester they are good... So is the DJ-X3 defective or do i try another type of battery.

thank-you

Geneva Conventions only apply to certain "classes" of people.
Non combatants are clearly spelled out.
Soldiers are defined and if a fighter does not meet the
definition, then they are not a "soldier" but an "UC".
In the current Iraq situation it is being reported that
Iraqis are wearing USA uniforms, if true, and any such fighters
are caught, they are not POWs and can be legally shot on the spot.
All quite correct under the conventions.
No trial, no fuss, no paper work and no worry.
The same most likley will apply to our special forces who are
operating in Northen Iraq and dress in Kurdish style clothing.
If any of the guys are caught, the same rule applies.
The situation in Afganistan was murky. There was no lawfull, as in
recognised by any country other then Paksitan, so there was no lawfull
chain of command, etc.
In a simlar light, Iraqis, either uniformed or dressed as
civilians who show a white flag then start firing can also
be shot on the spot. Again perfectly correct. We do not
have to accept a second surender atempt from fighters who
have violated one surrender.
As a side point, the Taliban and friends who surrendered in
Afganistan, then attmepted to start fighting again should
have been eliminated. Period. A MOAB direct on their location.
No negatiation. Surrender, and fail to honor that surrender
and BAM you die.
Unlawful Combatants are more akin to pirates then soldiers.
And as such, enjoy NO RIGHTS under the Conventions governing
land warfare.
In short they can be tried in any way the winners decide is legal.
It may, or may not be "fair", but if we are going to argue let us
at least decide what frame work we will work in. As far as the
Geneva Conventions go these guys fail on many points are are
therefore pirates and should be dealt with in a prompt, humane
and permanent manor. They are all rather lucky that we decided to
take them to Cuba instead of having drum head courts and killing
them in a legal way in the field.
The basic rule here is to not be caught in enemy terrotory in
civilian clothing and not to fight for a gang of criminals that a

enjoy no international acceptance.
To compare what we have done to the people we captured in Afganistan
with the apparent murder of POWs who clearly meet the requirements
of the conventions is to ignore the reality of the situation.
Typical of the liberal mindset.

Terry

I just put up the audio I recorded of Airforce One. This was recorded off 3 different Jacksonville Center (ATC) freqs as Airforce One was enroute to MacDill.

You can find the audio at http://www.milaircomms.com/audio_library.html

Later tonight I'll have the audio uploaded of the CAP (Combat Air Patrol) flights what was enforcing the TFR (Temporary flight restriction) area around POTUS. This will include at least one warning to an inturder violating the TFR area....

1187. Re: Pro-95 Cable Question

Newsgroup: rec.radio.scanner
Date: 2003-03-26 23:22:04 UTC
From: "Joe M. Wade" <nascar@gtopower.com>
Message-ID: <3E823791.9000007@gtopower.com>
Source record: 34453

I've got the one from BlackBag. It works just fine with my pro-95 and
also my 2067. I just have to use different software for each.
Unfortunately, I ordered mine from the pro-95.com web site and paid the
"retail" price. They were very helpful though. A pleasure to do business
with. (and that's saying something these days)

If you want to verify before buying on Ebay, just e-mail them. They
answered my e-mail within a half hour or less.

No, the mobiles do not need the tone, just the base, that would be 107.2

Cable has been bought! Ordered it today from EBay. When I emailed the
address ebay provided, a response came from BlackBag, so I guess it's really
them selling that cable. I trust it will be the right one since I recognize
the name.

Nope. They use the iDEN system like Nextel. Not worth the effort to tune any frequencies that they have.

20 minutes is pretty bad. For me, a set of fresh alkalines lasts about a week of two 45-minute listening sessions per day. Still pretty bad, but I now use rechargeable NiMHs.

My biggest complaint about my DJ-X3 is the microphonics. Especially on strong signals and with less than freshly-charged batteries, the unit will break into audio oscillation. The loud screeeeching can be stopped by a sharp rap on the front of the case but it is very annoying. Anyone else have this problem?

Otherwise, I'm happy with mine.

Actually, I'd prefer direct sequence digital phase shift keying to FHSS for
security, especially if you're just hopping a conventional AM or FM voice
signal. If you've got a receiver that receives broadbandedly across the whole
stepping range, and you're close enough to the source, you might decode the
signal with a conventional demodulator!

At least with DS, the signal is digital and mangulated with the sequence code,
so it requires a knowledge of the spreading sequence as well as the
encryption/encoding method to intercept and decode the signal.

Comments?

P.S.: Yeah, that Hedy Lamarr story below is true. At least, they printed up
quite a story in the local newspaper about her and her idea to guide torpedos
using this technique.

Yes, and the IEEE gave her an award a couple years back; her response
was, "It's about time!" She also played the "dumb-blonde" hanging on
the arm of German generals and passed intelligence back to the allies.

Tough cookie, that lady.

Good morning,

I have a UBC 280 XLT (or SC 200 for USA readers) and i would like to tune aero mil communication in 137-144 Mhz range. Does some one know? any URL with pictures? I've found the modification for the 220 XLT but is that work on 280XLT?
Is it hard to build the computer cable to control the SC200? here in Europe the scanner is cable free and then we don't know if the firmware allows it!!!

Thanks for anwsers.

Thanks, I was using Tone Search last night and could not find one for the mobiles. I am not sure why they would not use tones on the mobiles and repeaters though. How do they stop interference and such?
How do they access the repeaters without codes?

I apologize if there are dumb questions.

A WARMONGER EXPLAINS WAR TO A PEACENIK By Bill Davidson

PeaceNik: Why did you say we are invading Iraq?

WarMonger: We are invading Iraq because it is in violation of Security Council resolution 1441. A country cannot be allowed to violate Security Council resolutions.

PN: But I thought many of our allies, including Israel, were in violation of more security council resolutions than Iraq.

WM: It's not just about UN resolutions. The main point is that Iraq could have weapons of mass destruction, and the first sign of a smoking gun could well be a mushroom cloud over New York.

PN: Mushroom cloud? But I thought the weapons inspectors said Iraq had no nuclear weapons.

WM: Yes, but biological and chemical weapons are the issue.

PN: But I thought Iraq did not have any long range missiles for attacking us or our allies with such weapons.

WM: The risk is not Iraq directly attacking us, but rather terrorist networks that Iraq could sell the weapons to.

PN: But couldn't virtually any country sell chemical or biological materials? We sold quite a bit to Iraq in the Eighties ourselves, didn't we?

WM: That's ancient history. Look, Saddam Hussein is an evil man that has an undeniable track record of repressing his own people since the early Eighties. He gasses his enemies. Everyone agrees that he is a power-hungry lunatic murderer.

PN: We sold chemical and biological materials to a power-hungry lunatic murderer?

WM: The issue is not what we sold, but rather what Saddam did. He is the one that launched a pre-emptive first strike on Kuwait.

PN: A pre-emptive first strike does sound bad. But didn't our ambassador to Iraq, April Glaspie, know about and green-light the invasion of Kuwait?

WM: Let's deal with the present, shall we? As of today, Iraq could sell its biological and chemical weapons to Al Qaida. Osama Bin Laden himself released an audio tape calling on Iraqis to suicide-attack us, proving a partnership between the two.

PN: Osama Bin Laden? Wasn't the point of invading Afghanistan to kill him?

WM: Actually, it's not 100% certain that it's really Osama Bin Laden on the tapes. But the lesson from the tape is the same: there could easily be a partnership between Al Qaida and Saddam Hussein unless we act.

PN: Is this the same audio tape where Osama Bin Laden labels Saddam a secular infidel?

WM: You're missing the point by just focusing on the tape. Powell presented a strong case against Iraq.

PN: He did?

WM: Yes, he showed satellite pictures of an Al Qaida poison factory in Iraq.

PN: But didn't that turn out to be a harmless shack in the part of Iraq controlled by the Kurdish opposition?

WM: And a British intelligence report...

PN: Didn't that turn out to be copied from an out-of-date graduate student paper?

WM: And reports of mobile weapons labs...

PN: Weren't those just artistic renderings?

WM: And reports of Iraqis scuttling and hiding evidence from inspectors...

PN: Wasn't that evidence contradicted by the chief weapons inspector, Hans Blix?

WM: Yes, but there is plenty of other hard evidence that cannot be revealed because it would compromise our security.

PN: So there is no publicly available evidence of weapons of mass destruction in Iraq?

WM: The inspectors are not detectives, it's not their JOB to find evidence. You're missing the point.

PN: So what is the point?

WM: The main point is that we are invading Iraq because Resolution 1441 threatened "severe consequences." If we do not act, the Security Council will become an irrelevant debating society.

PN: So the main point is to uphold the rulings of the Security Council?

WM: Absolutely. ...unless it rules against us.

PN: And what if it does rule against us?

WM: In that case, we must lead a coalition of the willing to invade Iraq.

PN: Coalition of the willing? Who's that?

WM: Britain, Turkey, Bulgaria, Spain, and Italy, for starters.

PN: I thought Turkey refused to help us unless we gave them tens of billions of dollars.

WM: Nevertheless, they may now be willing.

PN: I thought public opinion in all those countries was against war.

WM: Current public opinion is irrelevant. The majority expresses its will by electing leaders to make decisions.

PN: So it's the decisions of leaders elected by the majority that is important?

WM: Yes.

PN: But George Bush wasn't elected by voters. He was selected by the U.S. Supreme C...

WM: I mean, we must support the decisions of our leaders, however they were elected, because they are acting in our best interest. This is about being a patriot. That's the bottom line.

PN: So if we do not support the decisions of the president, we are not patriotic?

WM: I never said that.

PN: So what are you saying? Why are we invading Iraq?

WM: As I said, because there is a chance that they have weapons of mass destruction that threaten us and our allies.

PN: But the inspectors have not been able to find any such weapons.

WM: Iraq is obviously hiding them.

PN: You know this? How?

WM: Because we know they had the weapons ten years ago, and they are still unaccounted for.

PN: The weapons we sold them, you mean?

WM: Precisely.

PN: But I thought those biological and chemical weapons would degrade to an unusable state over ten years.

WM: But there is a chance that some have not degraded.

PN: So as long as there is even a small chance that such weapons exist, we must invade?

WM: Exactly.

PN: But North Korea actually has large amounts of usable chemical, biological, AND nuclear weapons, AND long range missiles that can reach the west coast AND it has expelled nuclear weapons inspectors, AND threatened to turn America into a sea of fire.

WM: That's a diplomatic issue.

PN: So why are we invading Iraq instead of using diplomacy?

WM: Aren't you listening? We are invading Iraq because we cannot allow the inspections to drag on indefinitely. Iraq has been delaying, deceiving, and denying for over ten years, and inspections cost us tens of millions.

PN: But I thought war would cost us tens of billions.

WM: Yes, but this is not about money. This is about security.

PN: But wouldn't a pre-emptive war against Iraq ignite radical Muslim sentiments against us, and decrease our security?

WM: Possibly, but we must not allow the terrorists to change the way we live. Once we do that, the terrorists have already won.

PN: So what is the purpose of the Department of Homeland Security, color-coded terror alerts, and the Patriot Act? Don't these change the way we live?

WM: I thought you had questions about Iraq.

PN: I do. Why are we invading Iraq?

WM: For the last time, we are invading Iraq because the world has called on Saddam Hussein to disarm, and he has failed to do so. He must now face the consequences.

PN: So, likewise, if the world called on us to do something, such as find a peaceful solution, we would have an obligation to listen?

WM: By "world", I meant the United Nations.

PN: So, we have an obligation to listen to the United Nations?

WM: By "United Nations" I meant the Security Council.

PN: So, we have an obligation to listen to the Security Council?

WM: I meant the majority of the Security Council.

PN: So, we have an obligation to listen to the majority of the Security Council?

WM: Well... there could be an unreasonable veto.

PN: In which case?

WM: In which case, we have an obligation to ignore the veto.

PN: And if the majority of the Security Council does not support us at all?

WM: Then we have an obligation to ignore the Security Council.

PN: That makes no sense.

WM: If you love Iraq so much, you should move there. Or maybe France, with all the other cheese-eating surrender monkeys. It's time to boycott their wine and cheese, no doubt about that.

PN: Here... have a pretzel, instead.But the international adventurism, the conjuring up of enemies that areabout to destroy us, that's second nature, very familiar. They didn'tinventit, others have done the same thing, others have done it in history buttheybecame masters of this art and are now doing it again.Noam Chomsky2-04-2003

1209. FS>> Icom R75 (price reduction)

Newsgroup: rec.radio.scanner
Date: 2003-03-27 16:52:28 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <g%Fga.29164$ZC6.8650565@news4.srv.hcvlny.cv.net>
Source record: 34475

I am offering an as new Icom R75 with DSP and Rado's Sync-AM mod. I am the original owner (purchased from Grove) and the radio has been in a smoke free environment). Radio will be shipped double boxed in original box with manual and original stock accessories.

I have been advised (and I thank those who took the time to let me know) that I had been asking too much.

$425.00

Please e-mail off list if interested.

Thank you,
John, KB2COP

> Wow, what scanner was that about?

Umm...about the "BrainDead866XLT". new model - can detect and transmit negative brain waves. Plays any bilge you want. Especially sensitive to signals from liberals, whiners, cooks, and the uneducated. Has only one band - picks up signals in the Clinton/Gore spectrum only. Can NOT be modified to pick up intelligence. Receives NPR. Has one time frequency - just listen for the Loony Tunes melody being repeated, over and over. It's portable - carry your ignorance ANYWHERE.

1212. FS>> Icom PCR-1000

I can't even find it in that database. Is it possible that a business won't be listed?

Also, is it O.K. to telephone some companies asking for their freqs? Has anyone ever tried this? Do you think the business would be leary of giving the freq to me? I thought about calling a few cab companies and seeing if that was their freq but I wanted to see if everyone thought that was ok. It might seem funny, I don't know.

Thanks!

> Council resolutions.
>
> PN: But I thought many of our allies, including Israel, were in violation
> of more security council resolutions than Iraq.

Actually, most of those resolutions were VETOED by the USA.

> WM: It's not just about UN resolutions. The main point is that Iraq could
> have weapons of mass destruction,

"could have"? We KNOW that they USA has weapons of mass destruction including Atomic bombs, but the UN and the world does nothing about that!

> and the first sign of a smoking gun could
> well be a mushroom cloud over New York.

What about the mushroom clouds in other countries set off by the United States?? Instead of worrying about what someone could, would and might do, why not punish the US for what it has, has done, and is continuing to do? All the while that Iraq has done nothing the past 12 years, the attack on them is exactly what we are supposed to be trying to prevent happening, yet WE ARE DOING IT!!

> PN: Mushroom cloud? But I thought the weapons inspectors said Iraq had no
> nuclear weapons.

But ISRAEL DOES!

> WM: Yes, but biological and chemical weapons are the issue.

Then WHY did we GIVE them to Saddam in the first place?!?! Why was it OK for him to attack Iran when it was in OUR interest?

> PN: But I thought Iraq did not have any long range missiles for attacking
> us or our allies with such weapons.

Iraq doesn't even have weapons to defend themselves with now! Where are the chemical weapons? Where is their air force? Why are they not able to fight back? Why is it that all the missles that are hitting Iran and Turkey this month from the US military and not Iraq???

> WM: The risk is not Iraq directly attacking us, but rather terrorist
> networks that Iraq could sell the weapons to.

Why would terrorists buy useless outdated old weapons from Iraq when they could buy NUCLEAR weapons from Israel? Or the USA? Or Russia?

> PN: But couldn't virtually any country sell chemical or biological
> materials? We sold quite a bit to Iraq in the Eighties ourselves, didn't we?

Where do you think they got them from in the first place? The USA STILL has more chemical weapons in the continental states than the rest of the world combined. We were SUPPOSED to destroy them, but still have over 75% of the original stockpile.

> WM: That's ancient history. Look, Saddam Hussein is an evil man that has an
> undeniable track record of repressing his own people since the early
> Eighties.

They why did his people vote for him, and why are they fighting for him now?

> He gasses his enemies. Everyone agrees that he is a power-hungry
> lunatic murderer.

Only under the direct order and supervision of the United States.

> PN: We sold chemical and biological materials to a power-hungry lunatic
> murderer?

Bush is the power hungry murderer. While Bush makes accusations against and slanders Saddam, he actually is DOING what he accuses Saddam of possibly perhaps maybe is going to someday do, he thinks.

> WM: The issue is not what we sold, but rather what Saddam did. He is the
> one that launched a pre-emptive first strike on Kuwait.

ONLY AFTER consulting the USA and getting our approval first! Don't forget, Kuwait was SLANT DRILLING into Iraq's oil wells and stealing Iraq's oil.

> PN: A pre-emptive first strike does sound bad. But didn't our ambassador
> to Iraq, April Glaspie, know about and green-light the invasion of Kuwait?

YES! That was her name, that is what I was reffering to in my last statement.

> WM: Let's deal with the present, shall we? As of today, Iraq could sell its
> biological and chemical weapons to Al Qaida.

WHAT biological and chemical weapons? They don't have them anymore. UN resolutions required them all to be destroyed years ago, and they were.

> Osama Bin Laden himself
> released an audio tape calling on Iraqis to suicide-attack us, proving a
> partnership between the two.

WHAT? When was this? I heard the tapes and Osama critizises Iraq and admits they want nothing to do with them. Saddam says the same about Osama. It is BUSH who keeps confusing the two, because he thinks they "all look alike" and are all the same.

> PN: Osama Bin Laden? Wasn't the point of invading Afghanistan to kill him?

YES. BEFORE 9/11 even happened! That is WHY 9/11 happened. And it happened because the US allowed it to happen so it could be used as an excuse to make the war against Afghanistan public and strike it harder and have a pretend reason to go after Osama and kill him. Osama was an agent of the US CIA.

> WM: Actually, it's not 100% certain that it's really Osama Bin Laden on the
> tapes. But the lesson from the tape is the same: there could easily be a
> partnership between Al Qaida and Saddam Hussein unless we act.

Osama is in US custody and can't do anything. His capture will made to appear as if it will occur just before the US presidential elections.

> WM: You're missing the point by just focusing on the tape. Powell presented
> a strong case against Iraq.

And Powell was able to tell the world WHAT the tapes would say before they were even given to Al Jazeera television and were first heard a day later!! How did he know what they would say before they existed?

> PN: He did?

He sure did. I would still like an explanation to how that was possible.

> WM: And reports of mobile weapons labs...
>
> PN: Weren't those just artistic renderings?

"Cartoon drawings" if you will.

> WM: And reports of Iraqis scuttling and hiding evidence from inspectors...
>
> PN: Wasn't that evidence contradicted by the chief weapons inspector, Hans
> Blix?

CONSTANTLY. Blix repeatedly stated the cooperation of Iraq.

> WM: Yes, but there is plenty of other hard evidence that cannot be revealed
> because it would compromise our security.

What a convienient excuse. Now that we are attacking and that "security" excuse no longer applies, how about sharing that info with the UN and the rest of the world? But this time, no forgeries and fake documents like the US keeps giving to the UN.

> PN: So there is no publicly available evidence of weapons of mass
> destruction in Iraq?

If there was, the UN inspectors had the opertunity to go to where Bush said it was and find it.

> WM: The inspectors are not detectives, it's not their JOB to find evidence.
> You're missing the point.

That is what INSPECTORS do. INSPECTORS are DETECTIVES. Please explain what their job WAS then if not to find weapons? See how stupid this argument is now?

> PN: So what is the point?

The point is, the US wants control of the world's oil.

> PN: Coalition of the willing? Who's that?

That is the new name of the country formerly known as the United States of America.

> PN: But George Bush wasn't elected by voters. He was selected by the U.S.
> Supreme C...

Don't anyone ever forget this. He was the fourth US president to take power without getting the majority of the people's votes. Yet be sure to go out and vote in the next election because "everyone's vote counts" How?

> WM: I mean, we must support the decisions of our leaders, however they were
> elected,

Then the Germans should have supported Hitler, he won the majority of votes in that democratic election before he turned it into a dictatorship like Bush is doing now. The Iraqi's should support Saddam as he is their leader. And they MUST support their Iraqi troops no matter how they feel about the war, for the same stupid reason we are told to support our troops no matter how we feel about the war. Can't be a hypocrite.

> because they are acting in our best interest. This is about being a
> patriot. That's the bottom line.

Patriotism for an evil dictator like Bush is not a good thing, it is a bad thing. Being UNpatriotic is good.

> PN: So if we do not support the decisions of the president, we are not
> patriotic?
>
> WM: I never said that.

The US government said it.

> PN: So what are you saying? Why are we invading Iraq?

OIL! Pay attention.

> WM: As I said, because there is a chance that they have weapons of mass
> destruction that threaten us and our allies.

Iraq has never in it's history threatened us or our allies. The US has weapons of mass destruction and constantly USES them against Iraq.

> PN: But the inspectors have not been able to find any such weapons.
>
> WM: Iraq is obviously hiding them.
>
> PN: You know this? How?

Because if he did have them, he would be using them against our troops now, and he is unable to because we made him destroy them over a decade ago.

> WM: Because we know they had the weapons ten years ago, and they are still
> unaccounted for.

My toys I had as a baby are unaccounted for, therefore I must be hiding them somewhere in my house. You will never find them anywhere in my house, but it is up to me to prove I don't have what I don't have. How do you prove you DON'T have something? It is an IMPOSSIBLE thing to do.

If you can not PROVE you don't have chemical weapons in your house, does that give me the right to attack your house and kill you? I guess you will have to die then because there is no way you can PROVE you don't have any. Think about this and see how war with Iraq was inevitable.

Heads I win, Tails you lose.

1233. Uniden Scanners of mass destruction

I want you to PROVE that you don't have don't have 12 BC-200XLT scanners with mods to receive cellular phone calls hidden in your house.

It will not be our jobs to inspect your house and try to find them, you could just keep moving them around or have them deeply buried or something. It is also not up to us to prove that you have them. I could, and I can assure everyone on this newsgroup that you have them, but I can't show you this proof because it would jeopardize security.

However, if you do not give us those 12 BC-200XLT scanners in 48 hours, we will have to declare war on your house and start killing your family. You are not able to PROVE that you don't have these scanners (an impossible feat) And I predict you are too evil of a dictator to hand them over, so it looks like you and your evil family will be taken out of your house.

You have the capability of listening to cellular phone calls, and we are not going to sit around and wait for you to one day decide to listen to them, we are going to disarm you of those 12 scanners NOW!

The people who read the teleprompters on TV everyday are the least
intellectual people in the media.
Rush Limbaugh is not on any list of intellectuals, so he can't even be on
the bottom.

Well let's see. Rush was 14 years-old when the war started, so I
guess he would have been doing what other 8th graders do.

Dick

Rush Limbaugh is over-rated compared to the hosts we have here in Canada
(particuarly Peter Warren). Peter
Warren makes Limbaugh look like a wimp. The other prominent host in Western
Canada is Rafe Mair who
is conservative but slimes any government he does not like, even
conservative ones. He makes Rush Limbaugh
look like a university radio station talk host. Both Warren and Mair have
been around the block while Limbaugh
still sat in front of the TV.

Larry King and Aaron Brown (used to be ABC now CNN) is much better at it
than this Limbaugh guy.

Just my three cents U.S. (two cents Canadian at current exchange).

PK

> Aw shuddap liberal.

You are showing your intelligence level. I am not a liberal or a democrat.
But of course anyone who makes a statement you don't like must be, right?

I would find it as insulting to be a liberal or democrat as I would if you
called me a conservative or republican.

Believe it or not, there are more than just 2 types of people in the world.
Even astrology says there are 12 different kinds of people. Yet most Americans
think everyone has to be one of two types of retarded personalities. "Hey I'm
a conservative, what sign are you?"

Actually the POPE should go and be a human shield. Bush would not dare drop any bombs if he knew there was a chance that he would hit and kill the pope! The pope claims to be against the war, but does not do the one thing that would put an END to it. Invite Saddam into the Vatican embassy still open in Baghdad and the pope be there with him as a human shield.

That would STOP THE WAR. But the pope does not do this. Why? Is he afraid to die? He would just got to go to heaven with Jesus and God!

The POPE is a hypocrite scum that has the power to end the war he claims he is against, but does not use his power to end this war. He does not believe in God or he would do this.

When you order from R&L, make sure they're shipping from stock.
Otherwise, forget it.

I've shopped at R&L a lot since moving to Cincinnati from 2-land. I
love visiting the store, I've bought many thousands of dollars of stuff
there, and I've always found the store folks to be courteous and
helpful.

But three times I've had to wait for back-ordered items that the store
didn't have in stock. And I waited, and waited, and waited ....
Several months the first two times. I gave up after one month the third
time. In each of the three cases, when I contacted the supplier (Rohn,
Icom, M-squared) directly, they expressed surprise that I had been
waiting so long, and they shipped the item to me the next day. R&L
should be performing this kind of follow-up, but they don't.

You think you have a grasp of the issues when you post the nonsense that SOMEONE ELSE wrote? Because I disagree with you I do not have a grasp of the issues? Whose the diplomat here? You are a rhetoric-spewing ass.

BTW, I think Rush is a blowhard, but I am in favor of this war. Form an opinion for yourself, and stop listening to actors and other celebrities. Personally, I feel that our government, most of which were Ivy-League educated probably know a bit more about this than some dropouts who pretend to be other people for a living, and then think that they have the right to tell the rest of us what to think.

Get a grip.

I know that when you're tuning on the scanner and run into that "diesel engine sound" that you have a motorola type trunking system control channel. Is it type I or II, or do I have to search to find out? (I didn't know if type I has a different noise than type II.)

On the same note, is there a giveaway sign that lets me know I've hit an EDACs system?

For you Pro-95 owners, can it pick up on the LTR type trunking system?

I swear there was something else I was going to ask but I've already forgotten! Aren't you lucky?? If I remember it I'll post another question later.

Thanks for putting up with me!

Well I'm not a pro, but monitor motorola Type II here in MI with the PRO 92. I entered the freqs in the trunk system, and the radio automatically started "trunking" and working properly. If I might ask, do you have all the frequencies entered for the trunked system you are monitoring? Also, what area are you trying to copy on a trunked system? Finally, have you been able to successfully copy a trunked system? The trunk trackers are great radios...I thought we had reached the end of monitoring VHF/UHF when trunking started, but the PRO 92-93-95 work great. I hope you enjoy copying the trunking!

Chances are that it is part of a trunked system owned by Nextel. Nextel
often buys existing analog trunked systems and operates them until they
get absorbed by the digital Iden systems.

WNLC858, WPSV606 are a couple calls on this freq in the area.

Go to http://www.kb9ukd.com/digital/ and compare what you are hearing to the clips there.
This will help you
figure out the trunking mode used.

<sigh>
THE WAY THINGS REALLY WORK: Who Really Armed Saddam

March 20, 2003: SIPRI, a veteran Swedish disarmament group, compiles data on arms sales. Despite information published during the 1980s about where Iraq was getting its weapons from, the myth that Iraq was armed by the United States continues to survive. In fact, the major arms supplier for Iraq was the Soviet Union. And Iraq still owes the Russians over five billion dollars for arms delivered and not paid for. France and China are owed lesser amounts. Below are best estimates of the dollar amount of weapons sold to Iraq between 1973 and 1990.

Soviet Union- Over 25 billion dollars
France and China - at least five billion dollars each.
Czechoslovakia and Poland - about two billion dollars each
Brazil, Egypt and Romania - between $500 million and one billion dollars each.
Denmark- Over $200 million.

Since 1990, there has been an arms embargo on Iraq. But weapons, and spare parts, are still smuggled in. Many of these appear to have come from Eastern Europe, and France.

March 16, 2003: The U.S. Marines brought some fifty chickens with them to Kuwait. The birds, which are easy to care for, but sensitive to chemical weapons, were thought to be perfect as live chemical attack monitors. If the bird drops, the thinking went, it's a chemical attack. But within days of arriving in Kuwait, most of the birds died anyway. A few marines figured out what was happening and saved the rest. It seems that chickens spend most of their time pecking at the ground for stray bits of food. But these American chickens had never been in the desert before and their encounter with the Kuwaiti sand led to them gobbling up enough of the sand to kill them. Birds are not very bright. So the surviving birds were saved by keeping them off the sand. With most of their two footed "chemical attack detectors" gone, the marines looked around for a replacement. And found one, a critter nearly as clueless (at least in a combat zone) as chickens. It seems that many, if not most, of the hundreds of journalists assigned to combat units can't be bothered with carrying around their chemical warfare equipment. So many reporters plan to use the journalists (at least the ones who refuse to take their chemical protection gear with them) as chicken replacements. On a more practical level, the marines are bringing in several hundred homing pigeons for chemical attack detection duty. The pigeons are smaller, easier to take care of and are known to survive quite well in the Persian Gulf area.

February 20, 2003: With war in Iraq looming, experts are showing up everywhere telling us how many people are going to be killed. What makes this interesting is that there is still no agreement on how many were killed in the 1991 war. The higher estimates (up to 100,000 Iraqi dead) were pure guesses made at the end of the fighting. When the battlefield, and Iraqi cities, were examined, it was found that the number of Iraqi military dead was probably less than 5,000 (remember all those Iraqis trying to surrender, very few actually fought, and when they did, the majority surrendered after some of their buddies were killed.) Civilian deaths were probably less than 1,000. Even anti-American advocacy groups that visited Iraq after the war were surprised at how precise the US bombing was, and how few civilians casualties resulted. But a lot of experts estimating deaths from the war like to add deaths from the Shia/Kurdish rebellion right after the war, and the food and medicine shortages of the 1990s. In these cases, the deaths were probably in the hundreds of thousands. But what is missed here is these deaths were caused by Iraqis killing other Iraqis. The rebellions right after the war were not the first by the Shias or Kurds. Both groups had rebelled against the Sunni minority many times in the previous decades (and centuries, for that matter.) The deaths from starvation and lack of medicine were deliberate moves by Saddam to suppress rebellious attitudes among Iraqis who didn't like him. Noting the pattern of deaths in the 1991 war, Saddam is openly stationing troops and weapons in residential neighborhoods of non-Sunni Iraqis. How that will play out in the next war is hard to say. U.S. psychological warfare messages sent into Iraq over the last few months has made it clear that any officers hiding their troops among civilians will be held personally responsible if there are dead Iraqi civilians as a result. This could cause some strange military maneuvers when the fighting starts. The US is determined to limit civilian casualties in any new Iraq war, and has more precise weapons to achieve that goal. So it's a contest between Saddam trying to use Iraqi civilians as shields for his troops, and the US trying to avoid killing civilians.

February 14, 2003: A Maginot Line of Inspectors- There are many theories to explain the French position on Iraq. Some believe France is trying to retain its access to Iraqi oil. Others believe France is trying to hide its involvement in supplying Saddam's nuclear, biological, and chemical weapons. There are even reports of cash bribes to President Chirac from Baghdad. Many are simply ascribed to based on how low an observer's opinions are of the French. If this is not part of a duplicitous plot, what could the French be thinking?

The French have proven time and again throughout the 20th Century that their tactical and strategic vision is woefully outdated. During World War I, the French annihilated a generation of their own youth by relying on human wave attacks against machine-guns and modern artillery. Following the war, France used the peace process to so cripple Germany's economy that the nation was ripe for Hitler's hate mongering. The French insisted on carving up old empires and creating new countries that have lead to many of today's problems in the Balkans and the Middle-East.

Prior to World War II the French constructed massive concrete fortifications known as the Maginot Line to stop the Germans. The Germans simply drove

around the Maginot Line and conquered France in only six weeks. France also had the largest and most modern army in the world; but its outdated tactics could not withstand the German blitzkrieg.

The democratic allies defeated imperialism in Italy, Germany, and Japan. The French response to their liberation was to enlist Nazi Prisoners of War into the Foreign Legion and dispatch them to enslave a new French Empire in Africa and Asia. This convinced many in the Third-World that the West intended to keep democracy and freedom for itself. In 1956 the French convinced Britain and Israel to join in its unilateral invasion of Egypt. This invasion was launched to embarrass President Nasser of Egypt for supporting Muslim rebels in the French colony Algeria. The only time in UN history that France used its Security Council veto power was to foil a UN resolution to stop their invasion of Egypt. The French unilateral wars against Algeria and Egypt are one of the primary causes of Arab distrust of the West.

Now the country that blundered its way through the 20th Century wants to decide how to deal with the Iraq crisis. They believe that inspectors and sanctions will contain Iraq's Weapons of Mass Destruction (WMD)program. They are trying to build a Maginot Line of UN Inspectors to protect themselves from WMD attacks. While this line of defenses, like the last one, may look impressively strong; Saddam has simply mounted his production on trucks and is driving them around the new Maginot Line.

Once again France's strategic thinking is decades out of date. In the past WMD production and research required huge industrial complexes. Today's facilities are truck mounted and can be hidden in a million places the inspectors will never look. In the first seven years of inspections the UN found documents to verify that Iraq may have produced ten billion lethal doses of biological toxins. The Iraqis have been able to hide these huge stockpiles from inspectors for twelve years.

In previous wars it took large artillery bombardments to make chemical weapons effective. Today the weapons are more potent and terrorists provide an effective delivery system. Al Qaeda has been caught with plans to add chemical weapons into building ventilation systems. We could assign a UN Inspector to guard every air conditioner in the free world; but would they have the will to stop the slaughter, or would they stand aside and watch the massacre like UN Peacekeepers did at UN Safe Havens in Bosnia.

During their 12 years of inspections the UN has proved Saddam had 36,000 WMD delivery systems he will not account for. The new round of inspections have found 18 of these weapons, with continued inspections they are on pace to find all of Saddam's weapons by September the 11th, of the year 2301. Only a fool or a Frenchman could believe we could contain the weapons for that long.

The French still don't realize that nations no longer need fleets of inspectable bombers and intercontinental missiles to attack their enemies. For the cost of 19 plane tickets the world's only superpower was brought to its knees. Now what if those 19 attackers had WMD, how much damage could

they do? A Defense Department analyst found that one plane spraying 440 pounds of anthrax over Manhattan would kill 1,000,000 people. Zacarias Moussaoui had the research on his laptop and Mohamed Atta tried to buy the cropduster. Why would Atta try to buy the cropduster unless he had access to WMD? The Czech Republic still affirms that Mohamed Atta met with an Iraqi intelligence chief in early 2001. The Czechs expelled this "diplomat" BEFORE 9-11-01 for providing assistance to terrorists who were planning to attack American and Jewish targets. An intelligence agent, from a hostile nation that is hiding WMD, was assisting Islamic terrorists and met with a suicide bomber who was trying to buy a crop duster to spray WMD. These actions occurred two years ago; yet the French don't believe their ally Saddam and his alliance with terrorists is an "imminent" threat.

The French have proven they have no interest in containment. They have signed agreements with Saddam to develop Iraqi oil fields when UN sanctions are lifted. Even though the inspectors have proven that Saddam is still hiding WMD; the French have tried on several occasion to have the inspections and sanctions lifted. Hans Blix has stated that he will submit a plan in March to end inspections and lift the sanctions; ending the containment the French and their apologists say will work.

The Maginot Line did not protect France from Germany. It only forced Germany to invade three other countries to get around it. The Maginot Line of Inspectors has failed to stop Saddam for twelve years, and their current pace requires 300 more years. The only question is which countries will be attacked with Iraq's Weapons of Mass Destruction, while they drive around this new Maginot Line to France. Recent terror alerts suggest Al Qaeda is planning to used WMD. Police throughout the world are on the look out for terrorists using light bulbs and fire extinguishers to spread deadly toxins. It's beginning to look like the Maginot Line has already been breached.--

Hmmm maybe the reason why its posted all over the internet is because
mindless copycat trolls like yourself have nothing much better to do
than to spend half your waking hours on a computer.
You wouldn't know an original thought if it smacked you in the face.
Why bother when you can just have people think for you huh ?
Hope this helped.

> Who's salary would you rather take home?

In terms of working on the basis of quality of the presentation, I'd say
Peter Warren's.

Smaller than Limbaugh's, but we pay higher incone taxes than the United
States, and the higer income you have the more
Revenue Canada (our answer to the IRS) vacuums out of the paycheque ("pay
check" in the United States).

> I suspect that Rush makes more money than the whole group you quoted. Rush
> has more listeners daily than the entire population of Canada...

Not much of an arguement there, since the U.S. has ten times the population
of Canada, and there's more of a
Republican/Conservative bloc of supporters in the U.S. as a total percentage
of the U.S. population than there is of Progressive
Conservative/Alliance/conservative bloc as a total percentage of the
Canadian population (most of that is in Western Canada, but not in huge
amounts except Alberta and British Columbia, with some in Eastern Canada
such as new Brunswick and Nova Scotia, but not in large pockets) Besides
Peter Warren broadcasts nationally only on weekends. The other one - Rafe
Mair - is local, but is heard within an allotted time frame in Western
Canada.

But having said that, time to get back to radio scanner equipment and
associated stuff. U.S. AM Radio can wait until
I've acrossed the border and switched from a Canadian radio station to a
local U.S. one in the car.

Cheers from Canuckistan!
PK

1274. ID Tracker Updated - Scanner Recording Supported

Newsgroup: rec.radio.scanner
Date: 2003-03-28 02:49:40 UTC
From: "David M. Hitchner" <biteme@spammers.net>
Message-ID: <dEOga.48504$d15.7203@fe06.atl2.webusenet.com>

ID Tracker has been updated to version 2.4.0. The biggest
improvement is that recording to WAV files is now supported.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

See the version history for change details.

There are scanners that can be hooked to a computer and you can computer control them. There are also scanners like the Icom PCR 1000 that need the computer to run. It is just a little black box that you serially connect to the computer and there is software that gives a radio look interface. Many scanners though like the Pro 95 can have the memory loaded by computer but cannot be operated by computer.

Is that on the basis of feet or metric height?

Go ahead, hit me. 8-)

At least up here for emergency medical treatment, it's almost free to Canadian citizens (I don't pay for the hopsital and medical bills. Medical premiums are very low). The ambulance ride is only $50.00 (versus an easy $600.00 for an ambulance ride in the U.S) . 8-)

I'm sure my barrister would like to determine the current balance in your chequing and savings account too, eh? 8-)

Well back to scanning and frequencies (and the hockey game) 8-) The Canucks have creamed the Phoenix AZ Coyotes.

Cheers from Canuckstan!

For your info I spent 14 years in the U.S. Marines Corps,God bless
em,including a hitch in Desert Storm.
Don't know about you jack but I did my time.
Seems to me trolls like you can't quite even handle themselves in
political/military newsgroups, so they post off topic.
There are literally hundreds of groups where you can post your reposted
drivel and remain on topic - yet you don't.
I am about to hand you one of the greatest accomplishments you will ever
achieve in life - put you in my killfile.
If I need to argue with someone with the mentality of a drunken girl
scout I'll try yahoo chat thanks.

I was a naive fool to be a human shield for Saddam - By Daniel Pepper in the Telegraph

I wanted to join the human shields in Baghdad because it was direct action which had a chance of bringing the anti-war movement to the forefront of world attention. It was inspiring: the human shield volunteers were making a sacrifice for their political views - much more of a personal investment than going to a demonstration in Washington or London. It was simple - you get on the bus and you represent yourself.
So that is exactly what I did on the morning of Saturday, January 25. I am a 23-year-old Jewish-American photographer living in Islington, north London. I had travelled in the Middle East before: as a student, I went to the Palestinian West Bank during the intifada. I also went to Afghanistan as a photographer for Newsweek.

The human shields appealed to my anti-war stance, but by the time I had left Baghdad five weeks later my views had changed drastically. I wouldn't say that I was exactly pro-war - no, I am ambivalent - but I have a strong desire to see Saddam removed.

We on the bus felt that we were sympathetic to the views of the Iraqi civilians, even though we didn't actually know any. The group was less interested in standing up for their rights than protesting against the US and UK governments.

I was shocked when I first met a pro-war Iraqi in Baghdad - a taxi driver taking me back to my hotel late at night. I explained that I was American and said, as we shields always did, "Bush bad, war bad, Iraq good". He looked at me with an expression of incredulity.

As he realised I was serious, he slowed down and started to speak in broken English about the evils of Saddam's regime. Until then I had only heard the President spoken of with respect, but now this guy was telling me how all of Iraq's oil money went into Saddam's pocket and that if you opposed him politically he would kill your whole family.

It scared the hell out of me. First I was thinking that maybe it was the secret police trying to trick me but later I got the impression that he wanted me to help him escape. I felt so bad. I told him: "Listen, I am just a schmuck from the United States, I am not with the UN, I'm not with the CIA - I just can't help you."

Of course I had read reports that Iraqis hated Saddam Hussein, but this was the real thing. Someone had explained it to me face to face. I told a few journalists who I knew. They said that this sort of thing often happened - spontaneous, emotional, and secretive outbursts imploring visitors to free them from Saddam's tyrannical Iraq.

I became increasingly concerned about the way the Iraqi regime was restricting the movement of the shields, so a few days later I left Baghdad for Jordan by taxi with five others. Once over the border we felt comfortable enough to ask our driver what he felt about the regime and the threat of an aerial bombardment.

"Don't you listen to Powell on Voice of America radio?" he said. "Of course the Americans don't want to bomb civilians. They want to bomb government and Saddam's palaces. We want America to bomb Saddam."

We just sat, listening, our mouths open wide. Jake, one of the others, just kept saying, "Oh my God" as the driver described the horrors of the regime. Jake was so shocked at how naive he had been. We all were. It hadn't occurred to anyone that the Iraqis might actually be pro-war.

The driver's most emphatic statement was: "All Iraqi people want this war." He seemed convinced that civilian casualties would be small; he had such enormous faith in the American war machine to follow through on its promises. Certainly more faith than any of us had.

Perhaps the most crushing thing we learned was that most ordinary Iraqis thought Saddam Hussein had paid us to come to protest in Iraq. Although we explained that this was categorically not the case, I don't think he believed us. Later he asked me: "Really, how much did Saddam pay you to come?"

It hit me on visceral and emotional levels: this was a real portrayal of Iraq life. After the first conversation, I completely rethought my view of the Iraqi situation. My understanding changed on intellectual, emotional, psychological levels. I remembered the experience of seeing Saddam's egomaniacal portraits everywhere for the past two weeks and tried to place

myself in the shoes of someone who had been subjected to seeing them every day for the last 20 or so years.

Last Thursday night I went to photograph the anti-war rally in Parliament Square. Thousands of people were shouting "No war" but without thinking about the implications for Iraqis. Some of them were drinking, dancing to Samba music and sparring with the police. It was as if the protesters were talking about a different country where the ruling government is perfectly acceptable. It really upset me.

Anyone with half a brain must see that Saddam has to be taken out. It is extraordinarily ironic that the anti-war protesters are marching to defend a government which stops its people exercising that freedom.

USWAR/Baghdad warns people not to leave city

Baghdad, March 25, IRNA -- The ruling Ba'ath Party of Iraq has warned its people not to evacuate the city or their houses and property or these would be confiscated by the government.
According to IRNA correspondents, the Baghdad government has announced that those who leave the city will not be allowed to return.
It further referred to the increasing number of bunkers that are being dug out all over the city including in streets, schools, governmental and non-governmental buildings and medical centers.
But the IRNA correspondents quoted a foreign reporter as saying the US-led coalition forces have set a number of days for civilians to leave Baghdad after which they will announce the city as a military region.

As I expected, this idiot is hiding behind a bogus email address. So my question is, what does this have to do with police scanners?

1303. REFCOM MV2000D pre-amplifier schematic

Newsgroup: rec.radio.scanner
Date: 2003-03-28 09:16:31 UTC
From: marcnews2003@yahoo.com
Message-ID: <f2d9ef2c.0303280116.7a9196c1@posting.google.com>
Source record: 34319

Hello,

Sorry this mail is in English for a German newsgroups as well, but the question
is about a pre-amplifier made in Germany. Hope you can help me.....

I have a pre-amplifier from the German brand 'REFCOM'.
The type is MV2000D. It's a broadband pre-amplifier (20-2000MHZ) with 5
selectable bandpass ranges (range is selected by a switch on the indoor unit).
The bandpass filters are built-in in the outdoor unit, before the antenna
signal is being amplified. I think it's a very good amplifier....
One of these bandpass ranges (500-2000 MHz) I want to modify now so that it covers a larger range (should be modified to 120-2000 MHz.)

I opened the case of the outdoor unit and it seems that the bandpass filters
are just built by putting a high pass filter and a low pass filter in series,
so that it forms a bandpass filter.
By looking how the components are placed it looks like Butterworth filters.
It seems that I only need to modify the HPF filter part of the
500-2000 MHz bandpass filter from 500MHz into 120 MHz, so that it covers 120-2000 MHz.
The filters are built by means of SMD components. The values of the inductors
are readable from the SMD components, but unfortunately not the values of
the capacitors :-(
All the capacitors look the same, but I reckon thay have different values.

Therefore I am looking for the schematic of this pre-aplifier. Does anybody know the company REFCOM in Germany? It doesn't seem to exist anymore (pre-amplifier is already quite some years old....)
What happened to REFCOM and is it possible at all to get the schematic?

Many thanks in advance,
Marc

1304. Re: Newbie quest about squelch modes

Newsgroup: rec.radio.scanner
Date: 2003-03-28 10:16:39 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3E842107.92A3EE8@mitre.org>
Source record: 34320

Here's a source of information, it's at http://www.strongsignals.net

<http://www.strongsignals.net/access/content/new_user.html#SEC09>

The better scanner frequency list/books will have the CTCSS or DCS listed

along with the frequency and call sign. Sometimes a tone will be used
system wide and
only mentioned in text, describing the agency(s) that us it, This is so

it can be entered into radios capable of using the tone coded squelch
feature!

If you post or pass along ANY frequency information ,PLEASE include
the tone code(s)!
Some scanner radios DO NOT have the tone search feature, but can still
us the tone
along with the frequency, if the tone is known! Having the proper tone is
always a great help to folks with radio(s) using tone codes.

The tone codes are mostly used on FM in the land mobile bands. They
are usually not used
on the AM VHF aircraft or the VHF Marine bands.
Jim

Yes, I used to have a shortwave-active antenne from them, but unfortunately
they went bankrupt years ago.

> What happened to REFCOM and is it possible at all to get the
> schematic?

Sorry, can't help you with that.

Maybe you can contact Charly Hardt, he runs a shop in Remscheid /Germany, he
once repaired my Refcom-Antenna.

http://www.charly-hardt.de/

or e-mail:
chardt1025@aol.com

As I said, he is not associated with Refcom, but he did repair some of their
equipment, so maybe he can point you in the right direction.

Go to http://www.strongsignals.net
and look under New users FAQ for info on trunking.
Then check out the trunking board, down the bottm are resources
to find out if any trunking systems are on the air, in town
and if any trunk tracker scanner radios can follow them!

Scanners capable of listening to 800 mhz have been around for a long time.
Trunking scanners also exist to listen to trunked radio systems. There are even
scanners out there to listen to digital systems, although I am not sure how
well they work.

Many police departments are still on standard VHF frequencies, particularly
here in NJ. Most of the county north of me (Monmouth county) uses frequencies
in the 155 mhz range.

So, to answer your question, if you buy a scanner that has been manufacturered
in the last few years, there will still be plenty to listen to.

Source record: 34338

Hi MrsCat,

Some of the lovely computer controlled scanners can be costly, but what costly is to me may be pennies to someone else. With my Pro-95 I can hook it up to the computer to program the scanner, but that's about as "computer controlled" as it gets, at least to my knowledge. Like Greg mentioned there are some that exist but I know my pocket book doesn't have the cash to buy one.

As far as how far you can pick up with a scanner, usually it's about 25-50 miles radius from your location, in other words, "line of site." I've heard some people say they can pick up other strange things depending on signals bouncing off the atmosphere, but I don't know too much about that myself as I am kinda new to this.

I'm posting this at 10:45am eastern time using google, so it probably won't show up until tonight. GRRRRR.... Sorry if it turns out this message will be pretty much what other responders say. I just don't see them as Google groups is slow as molasses!!! When I'm at home I use my Outlook Express to read news messages and it's instantaneous.

Have fun!

In Outlook Express, click the TOOLS buton, then at the bottom of that drop-down menu, choose OPTIONS. Click on the SEND tab after the options window opens. At the very bottom of that window, you will find, "News Sending Format." Click the button next to "Plain Text". Then click on OK and you should be all set...

PRO-2026 FS

Non modifiable pro 2026 100 channel mobile scanner in decent shape.Has 800 mhz but no L201 for cell mod.20-148A but has the b board in it......Nice scanner works great 7 on a 10 scale for cosmetics - 10 on 10 operational,does the job,got another don't need - make me a decent offer.

I have both and the 7100 wins hands down. The r-10 is plagued with intermods
and the sensitivity leaves a lot to be desired.

I replaced the 600 mAh NiCads with 1800 NiMh and with normal listening I
recharge every other day..

Check the reviews of the two at http://strongsignals.com

Good luck!

Trucking is the process where boxes and cargo are moved by large motor conveyances. ;>)

Trunking on the other hand is a method of distributing conversations over a group of frequencies. Each user has a group number and may jump from frequency to frequency during a conversation. A trunk tracker allows you to follow the conversation.

For more info that you can possible use check out http://trunktracker.com

NPR Commentary: Illogical reasoning of a war against Iraq

March 13, 2003

Peter Freundlich

All right, let me see if I understand the logic of this correctly. We are going to ignore the United Nations in order to make clear to Saddam Hussein that the United Nations cannot be ignored. We're going to wage war to preserve the UN's ability to avert war . The paramount principle is that the UN's word must be taken seriously, and if we have to subvert its word to guarantee that it is, then by gum, we will. Peace is too important not to take up arms to defend. Am I getting this right?

Further, if the only way to bring democracy to Iraq is to vitiate the democracy of the Security Council, then we are honor-bound to do that too, because democracy, as we define it, is too important to be stopped by a little thing like democracy as they define it.

Also, in dealing with a man who brooks no dissension at home, we cannot afford dissension among ourselves. We must speak with one voice against Saddam Hussein's failure to allow opposing voices to be heard. We are sending our gathered might to the Persian Gulf to make the point that might does not make right, as Saddam Hussein seems to think it does. And we are twisting the arms of the opposition until it agrees to let us oust a regime that twists the arms of the opposition. We cannot leave in power a dictator who ignores his own people. And if our people, and people elsewhere in the world, fail to understand that, then we have no choice but to ignore them.

Listen. Don't misunderstand. I think it is a good thing that the members of the Bush administration seem to have been reading Lewis Carroll. I only wish someone had pointed out that "Alice in Wonderland" and "Through the Looking Glass" are meditations on paradox and puzzle and illogic and on the strangeness of things, not templates for foreign policy. It is amusing for the Mad Hatter to say something like, `We must make war on him because he is a threat to peace,' but not amusing for someone who actually commands an army to say that.

As a collector of laughable arguments, I'd be enjoying all this were it not for the fact that I know--we all know--that lives are going to be lost in what amounts to a freak, circular reasoning accident.

Peter Freundlich is a freelance journalist in New York .

1338. MICHIGAN CHANGING THE WAY WE LISTEN TO SCANNERS

Newsgroup: rec.radio.scanner
Date: 2003-03-28 18:23:30 UTC
From: BABYJSMAMA@webtv.net
Message-ID: <1708-3E849322-121@storefull-2196.public.lawson.webtv.net>
Source record: 34262

I had posted earlier about this..and wondered with my 100 channel..12 band -800mhz-BC 860XLT-Twin Turbo..how is it going to be affected..please read the following..... Civilian police scanners around Michigan are going silent, but not because crime has come to a stop.
The state's new law enforcement communications system will be up and running within two weeks. That means the old VHF system that people could pick up at home will be turned off.
Local fire departments and ambulance services will continue using the old system. But the new, 800-megahertz system will scramble central dispatch communications -- and won't be available to the general public.

Notice they have trouble grasping and arguing the issues, they just spit out
what they heard on the radio from the Rush and Hannity shows.
NPR, Liberals, all those words. That the've been using for 15 years.

I told hubby I want a new scanner for my birthday which is in May so have plenty of time to find the right one. Now my question is which is the best to use to get thing over the computer. I usually have this thing on from the time I get up (around 530) til I go to bed (which is about anytime around 10 or later lol) I have it right in our living room the computer I mean lol But I would like something I can hook up and find and hear on the computer but cheap lol Greg said something about Icom PCR1000 what else is there?

Do I get labeled a dittohead if I point out to both you and "Pointing
North" that this isn't a "war in Iraq" newsgroup? Or is reading
comprehension just not your strong suit?

Listen, let me apologize for mischaracterizing you in my earlier
post--I was in a hurry. If I'd had to time to check out what should
have been obvious--that you're one guy pathetically supporting your
own post out of insecurity--I wouldn't have suggested that there were
two of you. Again, sorry for the mistake.

1353. Scanners becoming illegal in 8 states ?

Newsgroup: rec.radio.scanner
Date: 2003-03-28 20:07:55 UTC
From: "Povl H. Pedersen" <povlhp@povl-h-pedersens-computer.local>
Message-ID: <slrnb89ast.115.povlhp@povl-h-pedersens-computer.local>
Source record: 34270

According to slashdot:
http://yro.slashdot.org/article.pl?sid=03/03/28/1541230

There is a bill on the way that will make it illegal to
tamper with or steal communications services. But early
on in it is also says it will be illegal to use a communications
service without the authorization from the provider.

This is where I see scanning, becoming illegal in:
MA, TX, SC, FL, GA, AK, TN, and CO

Anybody else here who as any views on this ?

>, Twin Turbo..can trunked frquencies be put in this scanner ?Susie

You could put trunked frequencies into it, but it wouldn't scan the properly.
You'd need a special scanner made for trunking, such as the Radio Shack
Pro-2053, 93, etc... There's Bearcat versions too...

> Check the reviews of the two at http://strongsignals.com

You might also want to look at the Trident TRX200 aka Camnis HSC-350
aka Stabo XR1810.

It is newer, has all the software features you want like
band scope, 1000 memories, 50 skip memories, SSB, CW, all the
frequency steps you might want, including 8.33 kHz (new airband in
Europe), S-meter, can be fully remote controlled from computer with free
software. And it is pretty light. Frequency range 0.1 - 2149 MHz.

Its weak side is the average shortwave reception. But I guess
a Sony ICF-SW7600GR is better than most/all hand scanners.

I am waiting on my unit. It is what the dealer recommended over the
other small units like the 7300, VR500, ic-r10, and what he is using
himself.

Yeah. Federal pre-emption. Yes, the FCC is screwed up. But at least
it's just ONE screw-up and not 8, going on 50.

I posted http://yro.slashdot.org/comments.pl?sid=58794&cid=5617835

This political sausage appears to have been started by MPAA. And I
have news for the rest of you readers: If you think your
congressional representatives are ignorant, you ought to see what many
state houses are like. Not only do they not understand important
issues such as jurisdiction, they don't even understand the
technologies affected by these broad bills.

If you want the full story without the ignorance you often see in
Slashdot, see http://www.freedom-to-tinker.com/

And finally, if you live in these states, please call your
representatives to complain!

Nonsense! The good lord would look over him and make sure he made it in good health! Especially when the Pope prayed to god for helping him with such a noble cause, don't you agree?

The Pope could not lose. He and god have the power to stop the war, yet neither make any effort to do so.

Are you saying the Pope does not really believe in god and see's your point and does not want to chance it and die? Perhaps going to heaven is not a comforting enough a fantasy to truly believe in himself?

Interesting how a cab driver in Iraq (a NON-English speaking country) knows how to speak English when most cab drivers in the USA don't know how to speak English, don't you think?

> "Don't you listen to Powell on Voice of America radio?" he said. "Of course
> the Americans don't want to bomb civilians. They want to bomb government and
> Saddam's palaces. We want America to bomb Saddam."

Not only do Iraqis know how to speak English, they listen to the VOA too.

Why is it all the real Iraqis statements against the US have to be translated into English first, but all the fictional Iraqis that hate Saddam all know how to speak English when a giant portion of people in the USA don't know how to speak English?

If this cab driver really existed, Saddam would not have had 100% of the people's votes like he did. This cab driver sounds like someone who would have voted against him, but that's not how it turned out.

No, are you so stupid to think that an Iraqi would be listening to the VOA in any language? How many Americans do you know that listen to Radio Iraq's English broadcasts. None. Because the signal is always jammed by our government. They do that over there too. Thus how we know this story is bullshit.

> to get 100% of the votes. Are you for real?

There was a NO box that you could check. The same thing I see on many of the ballots here in the USA when I voted. Many local offices had only ONE CANDIDATE on my USA ballot, the only difference is, there was NO "NO" hole to punch, so no matter what anyone did, the guy would win.

In Iraq, if everyone checked the NO box, Saddam would have lost. In a previous election, there were actually about 5 or 15 (forget the exact number off hand) people that did not vote for Saddam. The very last election, 100% of the people checked the YES box.

Did you ever stop to think that if everyone is happy with a leader, that there would not be anyone running against him?

How many people voted for Bush? How many people voted for Gore? How many people voted for Browne?
How many electoral votes did Browne get? ZERO. Who is now in the white house?

And you are making fun of Iraq's election process?

Fix your own country before you try and screw up someone else's.

Iraq, a totalitarian regime, does not encourage immigration, especially form
non-Arabic speaking nations.

> > "Don't you listen to Powell on Voice of America radio?" he said. "Of
course

Most working class Iraqis don't speak English. The listen, in some degree,
to the USIS Radio Sawa, headed by Westwood One's Norm Pattiz. However, they
know that it is not socially acceptable to do this, so any listening would
be low profile.

> Why is it all the real Iraqis statements against the US have to be

What is a "giant portion?" To me, giant would be 25% or more. "Giant" seems
to mean "large" in my vocabulary.

About 5% of people in the US have limited or no English skills. I would
think that this was similar to any other time in our history when there was
an ongoing flow of immigrants, whether they be German, Italian or whatever.

Fidel Castro gets 100% of the votes in Cuba. Those who might vote against are either in Combinado del Este prison or swimming with the fishes. Papa Doc in Haiti did the same thing, but added a dose of torture in the formula. Hoxha did it for 40 years in Albania. Pol Pot did it in Cambodia... do you think anyone spoke out against old Pol and survived?

This is not exactly an uncommon state in totalitarian, repressive regimes. You obviously have not lived under one or experienced one close up.

I checked with Glen Hauser's World of Radio site, and found absolutely no monitoring reports about jamming of the primary international frequency used by Iraq up through yesterday. While we may be bombing the communications infrastructure to kingdom come, there is no jamming.

To wit:

"** IRAQ. The Republic of Iraq Radio shortwave transmitter on 11787 kHz continues to be heard despite the continuing American-led attack on Iraq. Yesterday afternoon (22 March) I tuned in at 1604 and heard patriotic songs and strident rhetoric until past 1650. Unfortunately, as usual with this transmitter, despite a fair strength carrier, the modulation level is very low so the programming is barely audible at times. Yesterday around 1600 a strong "noise" on 11790 did not help reception, although 11785 was fairly clear (apart from a weak station on 11784.9 - Indonesia?). This morning 11787 (23 March) the strong carrier on 11787 is still present.

Iraq has also been reported (see DX Listening Digests) on 6175 kHz, but I have not heard that channel here (Alan Pennington, BDXC-UK, AOR 7030+ / longwire/beverage, Caversham, UK, Mar 23, via DXLD)

** IRAQ. 11787, Republic of Iraq Radio Main Service, 0800 UT 22/03: Music and irate crowd shouting in Arabic. Very difficult to read any of the audio so unable to make positive ID. Also heard until S/off at 1535 on 23/03 and from 0645 UT 24/03. Heard on the 25/03 until 0715 UT when Carrier disappeared. No sign of Transmission when checking at 0800 hours on 26th March Graham Powell Editor - Online DX Logbook via DXLD)
A full list of English Broadcasts from the Middle East is available
Free at http://www.shortwave.org.uk

11787.0 - 1030 UT March 26, Strong signal 9+20 at this time; modulation seems to be better than previous days. Commentaries and

interviews in Arabic by male and female announcers + songs - Nothing heard on 6175.

Despite the bombing of the radio and TV building in Baghdad last night, Republic of Iraq Radio Main Service has been received this morning on 11787. The signal was good. I noticed that Iraq Satellite channel on Hot Bird 13 degrees east (TPS) was interrupted at 1200 UT. So let's keep on monitoring ... 73 (Pascal, Tours, France. March 26, hard-core-dx via DXLD) "

1373. FA :Universal M400 Decoder

Newsgroup: rec.radio.scanner
Date: 2003-03-28 22:52:25 UTC
From: spiffy1238@hotmail.com
Message-ID: <bfc8ffaa.0303281452.43f7367d@posting.google.com>
Source record: 34288

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=14956&item=3014778153

Excellent condition. Power supply and manual included. This unit has a
40 character LCD display, and I will also include a small Okidata 180
dot matrix tractor feed printer, which is indispensable
when using this decoder.

This will decode pager modes POCSAG, GOLAY and Super POCSAG from your
scanner.
Monitor pager phone #'s, pager text messaging, news, sports and
business updates, stock quotes, etc. Some truly spectacular listening
(reading!)
This has been my primary use for this unit, it is very easy to use and
a very enjoyable use of a scanner! $300 for all.

The M-400 looks exactly like Universal's current M-450 which can be
seen at:

http://www.universal-radio.com/catalog/decoders/0450.html

The M-450 does NOT offer pager decoding. This one does.

For scanner users, this device will decode:
ACARS aviation mode.
POCSAG Digital Pager mode
Super POCSAG pagers
GOLAY pagers
DTMF tones
CTCSS
DCS

For HF folks, it will decode:
Baudot 45, 50, 57, 100 baud
ASCII
SITOR A&B
FEC-A
SWED-ARQ
FAX 120 LPM 576 IOC

The printer does work, uses tractor feed paper, ribbon may need
replacing. Printer cable and power cable included.

The US government does not jam the external radio broadcasts of any country. Americans are free to listen to their propaganda from any source they wish. For instance, Radio Havana Cuba is one of the most popular shortwave radio services amongst SWL's in the US. This used to be the case with R. Moscow during the cold war. Other popular shortwave services include R. Korea (North), China Radio International (formerly R. Peking), Voice of Russia (formerly R. Moscow), along with perennial favorites such as the BBC World Service, R. Netherlands, Radio Canada International (CBC), et. al.

Just because people in totalitarian countries are not SUPPOSED to listen to external radio services, does not mean that they do not. There will always be people who are curious, or push the envelope. Be happy you live in a country where you do not have to sneak around to listen to what's going on in the rest of the world.

Apparently you are not a US citizen. I'm glad that you are aware that
Bush did not win in a landslide victory, in fact losing the popular
vote on the national totals. I chat regularly with a New Zealand
woman who had that impression that Bush won by a large percentage and
was an extremely popular President. The way he came off as though he
had a mandate, you'd think he had.

1379. GMRS

I like to monitor GMRS freqs.
Can anybody tell me what GMRS call signs are?
I have heard ham call letters and a combination
of sounds like old CB call
Any ideas?
thank you
peace
Dana

Michigan's 800 MHz system can be heard on currently available Uniden
digital scanners (BC250D and BC785D). While the system has actually been
in place for a couple years the rollout has been slow.

The current scanners can not however track the trunked system. The audio
can be heard, but in a conventional/non-trunked mode. The next
generation of digital scanners should be able to track the 9600 baud
trunked system.

And they probably did not live to vote again.

The very last election, 100% of the people checked
> the YES box.

Sure, if you wanted to live you voted yes.

>
> Did you ever stop to think that if everyone is happy with a leader, that there would
> not be anyone running against him?

Just who do you think Saddam would allow to run against him?

>
> How many people voted for Bush?

More than voted for Gore.

> How many people voted for Gore?

Less than voted for Bush.

> And you are making fun of Iraq's election process?

No, you can't make fun of something that doesn't exist. Having
only one name on the ballot and being forced to vote yes is not an
election.

What a ROAR!!! Larry King??????????? The same Larry King that hangs up on
EVERYONE who disagrees with him and his views/ THAT Larry King?
I'm no "ditto-head", but Mr. Limbaugh ENCOURAGES people to disagree with
him, and has NEVER hung up on someone!
I tried to Listen to Larry King, but was sickened by his attitudes,
assumptions, and MAINLY because of the fact that if he disagrees with you or
can't intelligently refute a point someone makes, he unceremoniously dumps
the call and moves on, looking for someone to agree with him.

Larry King?????????

Get real...

Old GMRS callsigns are KXX1234 like the old CB callsigns. I believe these can still be renewed and kept with no modification, but I'm not certain.

New GMRS callsigns are like most land mobile services now WXXX123.

Since some GMRS frequencies are shared with FRS, you may also here whatever the user desires as a callsign.

Huh? A "giant" portion of Americans can't speak English?

English as First Language (L1 speakers)

English is profoundly dominant (and is often the only language) in over 30
territories including: Anguilla, Antigua and Barbuda, Ascension, Australia,
The Bahamas, Barbados, Belize, Bermuda, Dominica, England, The Falklands,
Grenada, Guyana, the Isle of Man, Jamaica, Montserrat, Northern Ireland, St

Kitts & Nevis, St Helena, St Vincent & the Grenadines, Trinidad & Tobago, the USA, and the Virgin Islands. In the following countries it is dominant but at least one other language is significant: Canada, the Channel Islands, Eire, Gibraltar, Liberia, New Zealand, St Lucia, Scotland, South Africa, and Wales. Some believe that Spanish will soon be as significant in the USA as English.

Most recent estimates suggest that 377 million people speak English as a first language (Crystal 1997). The two largest concentrations are the USA (226 million) and the UK (56 million). As a percentage of the world's population, this means that 6.2% use English as their mother tongue, second only to Chinese.

English as a Second Language (L2 speakers)

There are no official figures available on the number of people who use English as a second language, that is, people whose mother tongue is not English but who live in countries in which English has official or joint official status and who therefore use English for official business. The estimate often quoted is 300 million, around one-third of the world's population. English is the official or joint official language of over 70 countries, but in some of these countries the language is little used by the majority of the population.

English as a Foreign Language (EFL speakers)

There are no official figures available on the number of people who speak English as a foreign language (that is, in countries in which English has no official status). Estimates range from 300 million to 750 million. Clearly such figures can only be treated as approximate. There is no way of quantifying the number of people worldwide who may have learnt some English at school.
~~~~~~~~~~~~~~~~~~
Then there's:

English was inherited from British colonization and it is spoken by the vast majority of the population, although more than 80 percent Americans have no British ancestors. It serves as the de facto official language, for instance as that in which government business is carried out. According to the 1990 census, 97 percent of U.S. residents speak English 'well' or 'very well.' Only 0.8 of one percent speak no English at all, as compared with 3.6 percent in 1890.
~~~~~~~~~~~~~~~~~~

You really ARE ignorant - funny, but ignorant - 100% of the vote - in a country where opposition is forbidden - what the hell kind of percentage do you EXPECT him to have???

Go figure...

Just because I pray to god for a iBook to fall in my lap every day does not
mean I will get it. And nobility is for the middle ages. God does what God
does for whatever reason. Don't question him/her. There's a bigger picture.

Source record: 34216

Hello, I was scanning the 136.00 - 138.00 MHZ frequencies last night and came across frequent FSK on 137.225 Mhz. This group of frequencies is for sattelite and sattelite rebroadcasting. At first I thought this was EMWIN (NOAA Weather) data, but after speaking with a tech representative at TigerTronics, he indicated that most EMWIN systems will received 1.69GHZ from sattelite and downconvert to 137.225 MHZ, but the data is never rebroadcasted on this frequency. He also, said that he is not aware of any EMWIN rebroadcasters in the Delaware, OH area. (Or all of Ohio for that matter.) So, this leaves a mystery as to the source of this signal.

Update: As I am writing this post I am now seeing the same data on 137.735MHZ.

Any help appreciated.

Ed

Incorrect. Off by 300,000 votes ... Bush won the election, but not
the vote.

> that over there too. Thus how we know this story is bullshit.

Now, this is interesting - something a bit on-topic.
This is a scanner group, but I'm assuming most here do a bit of SWLing as well. I hate to disagree with you (well, okay - I don't hate that) but lots of SWLers listen to English broadcasts from that region - including myself.
WHEN Iraq had a station that was CAPABLE of such transmissions (and that's been gone long before the war) there was no attempt to block it's English-speaking programming (of which there was very little).
During the Cold War, many people listened to the Russian powerhouses and their English transmissions, as many STILL do today. To say that the US government jams English-speaking signals from foreign nations is beyond ludicrous, and a testament to your lack of knowledge and basic ignorance.

> > I guess when your name is the only one on the ballot it hard not
> > to get 100% of the votes. Are you for real?

Somehow, his statements make sense...in HIS mind...

> There was a NO box that you could check.
> The same thing I see on many of the
> ballots here in the USA when I voted. Many
> local offices had only ONE CANDIDATE on
> my USA ballot, the only difference is, there was
> NO "NO" hole to punch, so no matter what
> anyone did, the guy would win.

<sigh>
Do you know ANYTHING about elections, and/or the voting process?
In the one-candidate scenario you mention, there is no other name simply because nobody else WANTS to run for that particular office. NOT because everyone in the district has been told, at gun-point, that they MUST vote for the ONE candidate, or they, and their family, would be dead.
Also, you have the option to WRITE IN a candidate of your choice. I would suggest that the next time you go to the polls, do a bit of research first, and understand how the voting process works.

> In Iraq, if everyone checked the NO box, Saddam
> would have lost.

Right. IN YOUR DREAMS. Are you REALLY THAT naive? How can a dictator "lose"?
Even most 4th graders understand that the "elections" in Iraq are a PR ploy,
and mean NOTHING.
If you'd like, I'll post here (or where ever you'd like) the explanation of
how the government works in Iraq. Any government body, besides Saddam
Hussein, is simply a rubber-stamp for Hussein.

> In a previous election, there were actually about 5
> or 15 (forget the exact number off hand) people
> that did not vote for Saddam. The very last election,
> 100% of the people checked the YES box.

Like there was a NO box - and anybody who thought they'd live to remember
checking it if there were. Use your head. Try.
The questions you should ask are these:
1) Was there REALLY "5 or 15" people who voted AGAINST Saddam (although I
have no IDEA who they would vote for, as nobody is insane enough to contest
him), and
2) Assuming those people DID exist, is there any empirical evidence to show
that they are still alive?

> Did you ever stop to think that if everyone
> is happy with a leader, that there would
> not be anyone running against him?

Did you ever stop to think, why do I even get up in the morning, when my
brain is incapable of assimilating even ONE coherent thought? What dictator,
in the history of the world, was ever "voted" into being their dictator? Who
voted to keep Hussein in power for all of these DECADES? Only people in
Washington, D.C. vote to put somebody in office after they've served prison
time (as Hussein has done on SEVERAL occasions). If someone, for example,
put a gun to your head, and said, say, "vote for Al Sharpton for president,
or you and your family will die!", are you honestly going to tell us that
you'd say, "No, it's my right to make a choice, and I want somebody ELSE,"
and then, perhaps, stick your tongue out at them to emphasize your point?
Not bloody likely...

> How many people voted for Bush?
> How many people voted for Gore?
> How many people voted for Browne?
> How many electoral votes did Browne get?
> ZERO. Who is now in the white house?

The duly elected President, you dolt. I knew this bilge was coming, I just
wondered WHEN.
Algore and his legal people recounted the Florida votes several times, and
each time he STILL lost. They blamed the confusion on the butterfly ballots.
Incidentally, do you realize that that particular ballot was designed by a
Democrat?

> And you are making fun
> of Iraq's election process?

<sigh>

WHAT election process, you imbecile? DICTATORS DON'T NEED TO BE ELECTED.

> Fix your own country before you
> try and screw up someone else's.

Oh, yeah - giving the people the freedom to express themselves and make their OWN choices and benefit and prosper from their country's vast resources is REALLY going to screw them up...

Unfortunately, I'm certain these points are lost on you, and you'll NEVER get it. Rather than educate yourself and get REAL FACTS, you parrot what the brain-dead Hollywood types blab.

How sad...

Not too well. Wah Wah. And who's going to pay the price?

Rush limbaugh / Sean Hannity crowd told us all that we shouldn't wait for the Iraquis to sing kum-ba-yah and give us big hugs. We even saw cartoons on the internet.
Instead we need to play hardball - We need to go in and take out Sadaam.
THEN the Iraquis will come out joyously sing and greet our troops.

Whoops ya got fooled again!

The problem is that people like this will NEVER be happy - they are
incapable of it. They can "feel your pain", and things like that, but don't
have the mental capacity to enjoy all that life has to offer.

<sigh>
This again? Even Algore's lawyers recounted the votes - SEVERAL times, and each time, Algore STILL lost. To be certain, Bush did not win by a "landslide", but you should keep in mind that Clinton was the LEAST voted for President in the history of the Unied States that STILL was elected into office. The turnout for his last election was the lowest in history, as people didn't necessarily want to vote for HIM, but felt they had no real choice, so many chose not to bother.

> I chat regularly with a New Zealand woman who had that

Now that's just out-right garbage, and you KNOW that. bush made a point of telling those around him NOT to gloat, and never ONCE (as Clinton did) claimed to have some kind of "mandate". Please don't fabricate such nonsense - let us believe you have some intelligence...

The VOA still is a propaganda tool. It still transmits in many languages to various parts of the world.

The word propaganda does not mean the contemporary assumption of it's meaning (though it could be argued that common usage changes or alters the meaning of a word). It simply means the propagation (dissemination, spreading) of a particular belief, tenet, doctrine or political point-of-view. All such are skewed to one extent or another. I reference the following example from the cold war:

The Americans and Russians were the only ones in a race. The American news report said that the Americans won the race, the Russian press said that the the Russians came in second, the Americans came in next to the last.

VOA does much the same thing, but by virtue of omission. For instance, they tend to play down poor economic conditions and high unemployment in favor of talking about conditions in other countries. They tout mainly the positive aspects of American life... just a sales tool.

ah, no.

we're going to war to make it clear to the UN that the UN cannot be
ignored, especially when it involves US security. the raison d'etre
for UN resolution 1441 was the general recognition that possession of
WMD's by terrorist regimes was unacceptable. however, when the UN was
faced with the responsibility to enforce its own resolution, it
balked. even chirac, hussein's whore in waiting, admitted it was ONLY
the presence of US troops that got minimal compliance from hussein.

get the facts straight. NPR generally doesnt on this issue.

of course this twisted, orwellian logic makes sense only to those who
believe the UN is a talking shop, and that dictators like hussein are
terrified of UN resolutions.

Seems to me I remember hearing uplinks for portable satellite telephones from McMurdo Station, Antartica, in this frequency range in the early to mid-1990's. Weekends were very busy. It was very distinctive because of the AT&T jingle or tune that preceded each call. Pat, K4AVO (All-Icom)

Short wave is usually thought of as just the frequecny range from 3 to 30
mhz. There are all kinds of signals and stations operating there.

The part that is mainly used for people to just get on and talk to each
other is called ham or amateur radio. To transmitt there you will need a
license. In the US it is a multichoice test and a 5 word per minuit code
test. The code can be learned in a very short time by most at that speed.
For the test you listen to prerecorded code and answer a few juestions
about what is sent. At 5 wpm it is only about 25 characters being sent in
one minuit.
The tests are given in many cities many times each year by other hams that
have already passed the tests.

YOu may want to go to www.arrl.org and check that out. It is a national
club for the ham operators.

Short-wave is from about 2 MHz to 30 MHz and because of the Ionosphere signals can skip around the world. Most of the broadcasts are in AM or SSB. Most of the commercial users are moving out of the short-wave bands and moving to satellite but you can still find some good ones. I haven't heard the Voice of America, Radio Canada, Radio Moscow or Radio Cuba in some time and the BBC has stopped its North American broadcasts sometime ago. The big users on short-wave are the Hams and are almost all on SSB or CW with some FM up in the 10 meter band. If you use a CB radio you are talking in the high end of the short-wave bands. Some countries do require a license to own a short-wave radio but Canada and the US don't. The big thing with short-wave is a good antenna and height above the ground.

If only Iraq realized we were doing it for her own good.
When she says No, deep inside she means Yes.
Someday she'll welcome me with open arms.
I know what she wants better than she does.
I gotta wear this rubber protective gear.
Can't start shooting blanks now.
She looks like the one who knocked down my erections last year.
I "may have" underestimated her resistance.
The world will be better off if she's less powerful than me.
Rush Limbaugh dorked me - the cycle must repeat iteself.

In the "shortwaves" many services. Many countries broadcast programs in the International Broadcast Bands. Then there are utility stations, some Marine (ship to shore, ship to ship) but that's being replaced somewhat by satellite comms. Another thing you can listen to is aircraft flying over the oceans. Then there are the Hams. You don't need a license to listen, but do if you want to transmit. Also the Military have comms in here too. The Broadcasters use AM (like your AM radio), but everyone else use Single Side Band (SSB). Most use Upper Side Band (USB) and in some Ham bands they use Lower Side Band (LSB). They are lists and documents on the web showing where to find these things. One is put out by a guy named McFadden if I remember the name right. Sort of a general overall list. If I can find the website, I'll post it. Oh yeah, there are also Time Stations. The Unites States have two, one around Boulder Colorado (WWV) and one in Hawaii (WWVH). These are found on 2.5, 5, 10, 15, and 20 Mhz. The Shortwaves as a group are officially from 3-30 Mhz but one ham band starts at 1.8 Mhz. Hope this wasn't to confusing. Eric KA6USJ

In NJ Newark and Teterboro airports are who I would like to hear. I have a list of Frequencies for both these airports but it seem that I only get anything on two sometimes three frequencies. Is anyone listening to these two airports? if so what are the frequencies that I should be listening to?
thanks
-
Anthony

Is that why bill never attacked clinton as a draft dodger because Billy O
was in College in England the same time Bill C was there?

As for bush being n the national guard, how come he didn't leave the
states?

and rush, well he's a joke.

Try Grove (grove-ent.com) or Universal. They have the same prices,
Grove is a little more personal in terms of service but the prices
match. I've ordered from both The free DSP coupons say for USA only,
but they will send to Canada if the R75 was bought in the USA and sent
to Cda. For Canada, get them to ship by postal service not a courier
service to avoid 30 or 40 bucks of customs brokerage (you may have to
insist on this depending on who you talk to when ordering. The delivery
charge is not much different, post is slower, but only by a day or two.
I get things in about 5 work days).

Radio equipment is duty free to Cda in all situations. You will get a
GST bill about 1/2 the time if the originating company doesn't have an
account. This is payable on delivery most of the time. Canadian price
has dropped 200 to 1199 or so, but this is still more than the USA
discounted price, the Cdn dollar is a little stronger lately, and you
don't get the give aways. The filter prices compare for Cda and US.

Now there you go, upsetting the liberal anti-government nitwits
that like to think our government is jamming those transmissions.
They don't like to hear facts which upset their anti-everything
theories.

Sometimes these frequencies are for airplane routing on the ground, which doesn't transmit on too much power.

I bought from R&L. They were close to me and had a considerably lower price
than most, $509 shipped. I ordered it at 2 PM and got it the next day at 2PM
via UPS ground!!! They are only 128 miles from me.

>Will the little radios you see with shortwave band be any good
>just to listen to things???

Well, yes and no. Most of the smaller, less-expensive (actually cheapo!) portable radios that have FM, AM and SW (and sometimes TV and Weather) will do fine for local stations, the main international broadcasters, and other easy-to-hear signals, but they typically have weak or otherwise poor audio, terrible selectivity (loud stations tend to show up all over the radio, not just the frequency they're assigned to, and makes it very difficult to hear other stations), poor sensitivity, and do not usually have the same range of coverage as slightly more expensive and larger models.
On one hand, if you're looking for a quick, cheap way to start out, a mini-cheapie multi-band would be fine for a short while. And you're only out $20 to $50, most of the time.
On the other hand, you may well find yourself wanting to hear more and hear better, and using one of those cheap models can turn you off of trying altogether.
It's like driving a tractor on the highway... it MAY or may not get you where you want to go, but it won't get you anywhere quickly or pleasantly.
I'd say for around $150 or thereabouts (less if you can find a good sale), you can get a decent portable radio that has full SW coverage plus FM and AM, and sideband capability, with performance light-years away from the tiny Coby/Kaito/Insert-cheap-brand-name-copy-here radios. Paying for a cheap one is almost a guarantee of wasting a few $20 bills, whereas spending $100 or more on a real radio almost guarantees that you will not have wasted any money, and also guarantees that your start in the hobby will be of high enough quality that you won't WANT to have wasted it.
It's a self-fulfilling prophecy. You get what you pay for. And I'd rather spend more and keep what I bought, than spend less and simply throw the $50 in the trash can.
Linus

For both Lisha and Steve, go to http://www.rdrop.com/users/billmc/ and scroll down to the Scanner and Shortwave sections. In the Shortwave section, you'll find a "Handy Shortwave Chart". This will list the International Shortwave Bands, Ham Bands, Marine Bands, and Aviation Bands. Also is a very handy 24 hour conversion chart converting from Local time (PST/MST/CST/EST to GMT/UTC/Zulu. The frequency charts are all generalized, as you can find some of the comms beyond the "official" limits, except on the Ham bands.

What you spend on a radio, is of course, up to you, but I also would suggest, the more the better radio you get. I have a Sony 2010, Sangean 909, and a Yaesu VR-500. The last is a receiver that goes from 100 Khz to 1300 Mhz with the usual gaps. It has AM/NAM/WFM/NFM/USB/LSB. All this in a package that literally fits in the palm of your hand. Good luck in the hobby! rec.radio.shortwave is a good news group, but gets rough around the edges and many an argument comes up on OT and On topic subjects. Just asking about a certain company, or radio can start flame wars. But what the heck, I read it any way :^) Hope some of this is of some help. Eric KA6USJ

1454. Radio Shack PRO-2067 Multi Trunking Scanner

Newsgroup: rec.radio.scanner
Date: 2003-03-29 21:03:23 UTC
From: Dave Schmidt <n9nlu@NO_SPAM_charter.net>
Message-ID: <v8c2m446p0tnbc@corp.supernews.com>
Source record: 34173

Dont know if my posts are going through ... I haven't seen the previous messages post on the group yet...so I'll post it again...

FOR SALE:

*** Radio Shack PRO-2067 Base / Mobile Scanner ***

500 Channels
Trunk Tracking - Motorola type I, II. I/II Hybrid, LTR, EDACS
SAME Technology for Weather alerting
PC Programmable
Direct keypad frequency input
CTCSS / DPL decode
4 line Alpha display
BNC antenna connector
Plus much much more features

*** Comes with the the following: ***
Mounting bracket
Original user manual
Wall wart power pack - for base use
DC power cord - for mobile use
Serial programming cable
Programming software
and a Kenwood mobile extention speaker.

This scanner has been tested and works just beautifully. Condition is Very good - non-smoker, never mobile. I bought 2 of them, I just need one... so one has to go.

I'm asking $200 for the whole setup ready to plug and play...shipped 2-3 day priority.

I accept Paypal online payments and US Postal Money Orders

Thanks

Dave Schmidt

Do you ever hear people use worn out phrases like:

"Now there you go, upsetting the liberal anti-government nitwits "

That's straight off the Rush Limbaugh radio.

hahah
they are so PROGRAMMED.

The University of RL:

"Now there you go" - From Reagan's debate with Carter
"Liberal" - Rush Limbaugh made this into the "Nigger" word.
"anti-government " - Gun owners know this one well.
"nitwits" RL fans can relate

They take a dozen or two of these phrases that they hear from the radio ,
and mix and match them when ever they need to disagree.
Rush never needed to argue the facts. These phrases did the job in many
people's minds.

Now these guys are in power and the deficit went straight down the toilet.
So did the economy, our international reputation, all in the name of a false
patriotism that they invented.

It's all gone!!!!

They actually think they are the patriotic ones.
You know how you can tell that they are not the patriotic ones?
Because they call someone unpatriotic for disagreeing with them, here in the
land of free speech.

They don't get it!

IF you are one of these stupid stupid people who are so intolerant, god help
us all.

The e-bomb will not disrupt tube equipment, it doesn't necessarily
completely erase all hard drives, and yes they have started using
them, they exploded one near the Iraqi television station that did
take it out for a while.

No problem, and take your time. There's a lot to absorb where features/specs/comparisons are concerned, and it can get a little overwhelming at times. With scanners, shortwave, any receiver, it really pays to do your homework and look around for the best overall compromise between your budget, the features you want, the features you *need*, size/space considerations, etc. You'll find it, there's a lot of good equipment out there!
Good luck-
Linus

Also many listed freqs will be backups and seldom used. At a major
international airport there will still only be one tower freq - one ground
etc. But probably lots of less interesting stuff like baggage handlers etc.

Susie;

here in Macomb County where I live, this fall they voted down the millage to upgrade to an 800mHz system. They were trying to replace the 40 year old system that they currently have.

Looks like unless they can come up with the $$$ Macomb is gonna be able to be heard on 460mHz for some time

>that over there too. Thus how we know this story is bullshit.

My sources tell me the Voice of America and the BBC are among the most
popular shortwave services. I have several excellent showrtwave
receivers and I hear no jamming. I don't believe I've ever heard of
the US jamming anyone. Even during the cold war Radio Moscow came in
loud and clear. Radio Havana is still one of the best signals.

Where are these jamming transmitters located? Where are you getting
your information? The US is one of the few countries whose citizens
don't use shortwave very often. There are too many alternatives.

In Afghanistan almost everyone had a shortwave radio. I think you need
to do a little more research.

Rich

> do you know anything about Icom PCR 1000 I would like something like
>it to listen through the computer I was wondering with one you get freq from
>the computer how far away can you pick from?

I am not familiar with the PCR1000, and can't comment with any authority. But if you're wondering how far your reception range will be, it really won't be any different than any other radio you use, as it still needs an antenna. The computer is needed to display all information about the radio (tuning, frequency display, mode, all the bells and whistles) and it will control the functions of the receiver, and stores all memories/frequencies, modes, etc. But you still need a decent antenna, and the computer will have nothing to do with how well the antenna performs. It doesn't get its signals from the computer. You can pick any frequency within the PCR1000's range (which should be at least 500 kHz to 30MHz, you'll have to see their specs for the actual range), but you won't hear any of them without a real antenna.
I believe the radio comes with an on board telescoping whip antenna, like on a portable, and also an external antenna jack to hook up a better antenna.

Wrestling on TV has never been a sport. It is showbiz. If it was
a sport, you would be able to be on the outcome.

The BBC may have stopped their "beaming" to the USA, but I still
listen on 5.975MHz at night and 15.4MHz during the afternoon.
Radio Havana Cuba, "The voice of liberation", is still going stron.
Radio Moscow has been replaced by Radio Russia. Not nearly as much fun.
I listened to Swiss Radio this afternoon at 15.nnn. I don't have
my log with me right now, it is on another Pc that has crashed.
I listen the "Vinyl Cafe" ever Saturday morning, 10:05EST on 13.650
on the CBC.
While a lot of SW services have left, there are still a lot of
interesting SW stations left.
I have the BBC on right now.
as you might guess from my email addy, r2000swler@.., I really
enjoy listening to SW on my Kenwood R2000.

Actually, the military admits to having microwave bombs that simulate
the electronic shock that would be experienced in a nuclear blast. I
was watching several news channels the other night and all of them
claimed the US had used one of those bombs near the Ministry of
Information.

There has been a running debate about the use of solid state equipment
because of its sensitivity to such shock waves. Many claim that the
military should use tube equipment because it's not as sensitive to
such shocks. It's the same sensitivity that causes us to ship solid
state equipment in anti-static pouches.

Saddam gives the families of suicide bombers thousands of dollars. The
suicide bombers kill themselves and others instantly.

The US pays soldiers to sacrifice their lives and to kill iraquis.
The only difference is that it happens more slooowly.

Each side considers the others to be criminals.

They both are right.

Thanks again Linus that does help. I guess I'll have to learn how to put and antenna up and get it working too lol I have never done anything like that before.I want to learn what trucking is all about. Not really sure.

Lisha

It certainly isn't a sport. It isn't very good showbiz either. I'd like to see a real wrestling event, with true athletes. Sadly, that never makes it to television.

By the way, I think you meant to say "BET on the outcome."

Have you gone to http://www.airnav.com ? Complete lists for any airport. Also keep in mind that an aircraft will use these frequencies for several minutes and then they're on a departure freq, on to local ATC, and then perhaps with NY or Boston Center if they're large/ travelling to other areas of the country. In oher words, as they move, they're going frequency to frequency along the way.

You can find the Center frequencies at http://www.milaircomms.com

Hello all.

I wonder if you can give me some help. My son is in Iraq now. He's a private and works on communications systems (that is radio gear) .
My neighbors pitched in together and bought my wife and me a "Realistic" brand shortwave radio to listen to reports coming out of the middle east. I'd like to be able to pick up some broadcasts, all I get is that "time of day" announcer.

I had a thought - If I can get this radio working, It would be neat to get him to broadcast a few words from the battle zone each night (using some of our family code words if necessary) , and hopefully I can pick up his voice and know that he is OK or not.
For instance - if he is OK, he will say "I see beautiful trees and a lawn"
But if he's being tortured he might say "There are car batteries in the room"

That way my wife and I can sleep easier knowing what's happening to him. If he is in trouble, I want to hear it from him rather than on the news or that al-Jazeeera place.

So my basic question is, how do I tune into the Iraq frequencies to hear him?
and how do I talk back to him?
Thanks for your help.
EG

First of all, you should never try broadcasting on a freq you dont have a licens for, surely
not on a army/navy or airforce freq, you could get into alot of trubble.
Secound, most battlefield radios are VHF, that means your chance to listen in are very slim, becourse the VHF signals dont reach the US unless your very lucky one day.
Third, most of the radios use encryption, so eaven IF you could get the signal, you would
not understand any of it.

The best chance to hear anything is on HF, 0-30mhz, but thats not where the major
battlefield radios work. Most of the trafic there is Airforce trafic control, not real battle
radio.

Sorry to say it, but thats the facts.

I wish you son the best and hope he is safe home soon.

Regards
Brian.

Emilio,

Bless you.... Your message really touched me. I wish there was a way I knew of that you could keep in touch with your son directly through a radio contact. But I know of none. The only connection I could ever think of is through cell phone and I don't even know if they work from Iraq to the U.S. Your heart is big and sweet, Emilio. May your son be safe and home before you even know it. I'm sure he makes you proud.

I did a search to see what frequencies you could listen to in Iraq, and these came from the milaircomms web page:

http://www.milaircomms.com/middle_east_shortwave.html - Schedule of broadcasts
http://www.milaircomms.com/war_iraq.html - Main Iraq war page
http://www.rferl.org/shortwave/shortwave-iq.asp - Radio Free Iraq listings

I have not listened to these myself, so I do not know exactly what you'll hear, but good luck to you in your search.

A friend,

Stacey

HOW RUDE! HOW can someone come on here and say something so RUDE to someone who came to us to seek help! This man is clearly feeling pain and doesn't need someone to tell him his questions are "dumb!" He needs us to help him. His son is in Iraq, for goodness sake! Show a little compassion! His question is NOT dumb! He has EVERY right to come here and ask for help. He only wants a connection to his SON, someone he loves VERY much! You should be ashamed. He is feeling pain over not knowing the fate of his own flesh and blood. If you had a child in Iraq you would spend sleepness nights wondering what your child was doing that very moment, whether or not they were safe! You would try ANYTHING and EVERYTHING to get a direct contact to your child!

Obviously you don't have any children or you NEVER would have posted such noise!!

You obviously have not been around here. Emilio does this kind of crap on a regular basis. His posts are nowhere near real. It is Emilio who is doing the insulting by making a joke out of the unfortunate soldiers who are POW's.
It is truely very sad when some one like this Emilio person finds sick humor in the horror and sadness of war and in particular having a son or daugter at war and possibly being killed or captured. Do some Google research on this sick idiot and you will see what I mean.

Cowboy,

IF what I hear is true and this Emilio Goldstein doesn't really have a child at war and was playing a sick joke and making fun of the war, then you have my apology. I scolded you simply because I believed what Emilio said was true. I had no idea he had a history of "playing around" with sensitive issues. Forgive me!

(And to think I went and did a search of frequencies for him!)

Cowboy, if this Emilio guy is fraud, I'm really truly sorry. Will you forgive me? (Time to take out that six-shooter!!)

I just have gotten used to the rudeness of some people on the newsgroups, especially in the shortwave group, that I automatically assumed you were one of them. It hurts me to see that people can be so cruel to one another. Don't get me wrong, there have been a number of friendly people on these groups, in fact, the kind posters far outnumber the rude posters. It just seems the groups are being overwhelmed by them (rude people) because it is they who bother me the most!!

So, sorry! Sorry to everyone else, too. I didn't know the history on this issue.

I'm afraid this wont work either.
Cell Phones need relay stations, a mast every few miles or so, the network comprises of cells (where the name come from), in the centre of each cell a base post. Those are not likely to be there in the desert. I wonder if Iraq has GSM, if so it might be blocked for other cell phones than from the Iraqis themselves..

What might work is the Iridium system by Motorola, This is a "cell phone" hand held type but it uses satellites; this should work worldwide.
But I have heard it has been switched off, due to lack of interest from the public. It is extremely expensive.
Other alternative is a satellite phone, Inmarsat system, widely used by reporters. Will you be able to take such a set with you in the army?
Can you take your TRX with you when you are a Ham operator??
Ruud

Uniden Bearcat 55xlt Scanner 4 Sale

I have a Uniden Bearcat 55xlt 10 channel scanner for sale.
Includes manual, antenna, and the original box

Asking $30.00 for it which includes shipping within the Continental
United States.

email me if interested.

Thank you,
Rodger
rbird2@peoplepc.com

1525. Uniden Bearcat BC200XLT 4-Sale

Newsgroup: rec.radio.scanner
Date: 2003-03-30 17:42:43 UTC
From: "Rodger N. Bird" <rbird2@peoplepc.com>
Message-ID: <MPG.18f0f69eeac6f5bb9896ed@trialnews.peoplepc.com>
Source record: 34141

I have a Uniden Bearcat 200XLT handheld scanner (with cellular coverage) for sale. A few features listed below:

Channels 200, Banks 10
Coverage 29-54 118-174 406-512 806-956 MHz
Priority 10 channels, Delay, Lockout, Keypad Lock
Instant Weather
Display Light
Power: 12 volts
Size: 2.75(W) x 1.25(D) x 7.5(H) inches
Weight: 20 ounces

I have the antenna, case, 2 BP-200 rechargeable battery packs, wall charger/adapter, car charger.adapter, and a copy of the manual. I do not have the original box or original owners manual.

The 200XLT is in fair condition and works fine. Both batteries are good and hold a charge, one of the BP-200 batteries is brand new. There are some scratches on the case and display. The selling price of $80.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

Firstly, you don't know the history behind this twit. You can be forgiven for that, of course.

Secondly, it takes some nerve to tell others they should be ashamed, when you're a self-proclaimed cyber-beggar, asking others to help pay your bills and buy you toys.

If you don't know what I'm talking about, this is from Celt Chic's website:

http://home.att.net/~monster-masher/beg.htm

Thankfully she has no takers - there is hope for people yet, I guess.

This sort of thing rubs me the wrong way, and although you can do what you want on your webpage, please don't come in here trying to take any sort of moral high-ground stance, as it makes you look like an even bigger naive.

Why don't you get a friggin' job, or a better job, and pay your own damn bills and buy your own damn toys?

Why not sell your computer, cancel your Internet access, and sell your radios if you're in a financial bind?

Sickening...

Americans are always amazed that "foreigners" can often speak English. The majority of Americans, however, are unable to speak any languages other than their own.....

The BBC World Service (now sadly decimated by the current "government")
still broadcasts in a huge number of languages, including Arabic.

No - until the "brave" American asshole Air Farce destroyed the Iraqi Shortwave stations, their English language broadcasts were perfectly audible in Western Europe. Undoubtedly the American "government" would jam these broadcasts within the USA, but the free world was still allowed to listen!

Clip, what do you do for a living, work as a burger flipper? At least I have a high paying job with a genius level IQ, what's yours, 2? The only reason I HAD (repeat, HAD) a cyber begging page up was because it was the next biggest thing on the internet. People were making money doing it. Second of all, I was simply trying to get help for all of my surgeries that have put me in the bind. Third, someone already HAS bought my toy. Obviously, prick, you need some toys. What's the matter, Mommy didn't give you a pacifier to keep your mouth shut? Here you go, baby doll, Mommy will give you one: PLONK!

;)

I've had enough of these losers on the newsgroups. Clip you're an SOB and you're just like the rest of the SOB's on this board. I'm done being nice to losers like you.

I happened to have COLON problems and I don't think that's any of your business. I didn't put that on my web page. Grow up, little boy. Go cry to Mommy.

grin It took me some time but I figured, hey, what the heck, I had enough and I had to let that guy have it!!! I've seen what the world is really like through talking to these creeps so I'm just going to let them know how I feel. If they want to mess with me BRING IT ON. Come face me in person, Clip, if you're a big enough man! (You're probably 350 lbs!!!)

Clip, I have a job, you burger flipper. I'm a Survey Statistician. Read That??? That's a HIGH PAYING job that requires a higher level of intelligence then you'll EVER claim or gain. Statisticians are a level below Actuaries of which I am studying to be which require a HIGH LEVEL of mathematics which you probably flunked in high school. I'm a mathematical genius so don't go telling me to get a job, burger-flipper. I'd like to see what you do!!

I've been in a bad mood ever since that guy came on here playing around with the war and making a joke over parents with children in the war. I've had people in the shortwave newsgroup pick on me for getting a shortwave listening call sign. I tried to make it peaceful there but it's useless. There are too many JERKS on the internet!

I didn't have medical benifits when I was in college. THAT was when I had
medical problems. I now have wonderful benifits, but that doesn't help pay
for everything that happened when I was in college. My debt is not
something I wanted to bring on the board. I had it on my PERSONAL web page
that I use to describe myself. I didn't bring my personal health problems
on this board. If someone goes to my personal web page that's fine. But
Fred, doll, that hurt. I really liked you. :(

Hey, C.C.,

Don't let him get to you. That's what floats his boat.

And, yes, anyone can hide behind a keyboard and say things they'd
never say in person.

Take care of yourself, and best of luck on the actuarial exams. I
took one as an advanced stats final, almost 20 years ago, and my head
still hurts!

No, I'm an IT professional, actually.

>At least I
>have a high paying job

Hence the need to beg.

> with a genius level IQ, what's yours, 2?

It's 133, taken unscientifically. If you're smart AND you have money, then
why are you begging for handouts, exactly?

> The only
>reason I HAD (repeat, HAD)

It's still up, Celt Chic; at least it was when I posted originally.

>a cyber begging page up was because it was the
>next biggest thing on the internet. People were making money doing it.

That is a lame excuse, and I really don't think virtual begging is going to
catch on. I hope not.

>Second of all, I was simply trying to get help for all of my surgeries that
>have put me in the bind.

Sorry to hear that.

>Third, someone already HAS bought my toy.

If someone donates to your "toy fund", will you say, "No, thanks, I have my
toy?" Or pocket the cash?

>Obviously, prick, you need some toys. What's the matter, Mommy didn't give
>you a pacifier to keep your mouth shut? Here you go, baby doll, Mommy will
>give you one: PLONK!

Sorry for pointing out the website that you tout in your sig. Seems I hit a
nerve. It says you're not ashamed to beg on your website. Is that true?

>;)

>I've had enough of these losers on the newsgroups. Clip you're an SOB and
>you're just like the rest of the SOB's on this board. I'm done being nice
>to losers like you.

Nah, I'm only a prick to society's leeches, the ones who prey on the
ignorant. They are the real losers.

>I happened to have COLON problems and I don't think that's any of your
>business.

It's not, so why are you telling me?

>I didn't put that on my web page. Grow up, little boy. Go cry
>to Mommy.

Ugly talk won't solicit donations.

See my previous post. Again I ask, if this is true, why do you solicit
donations?

Statisticians are a level
> below Actuaries of which I am studying to be which require a HIGH LEVEL of
> mathematics which you probably flunked in high school.

My HS GPA was 4.23 (I had taken some weighted classes for college credit)
and my college GPA was 3.23, from Penn State. Are you sure you want to go
here?

Good luck with your studies.

I'm a mathematical
> genius

Do mathematical geniuses have to beg, even though they are smart and
highly-paid? Glad I'm not one, then.

You know, it's beginning to seem that you take other people's money for fun,
rather than out of any real need.

so don't go telling me to get a job, burger-flipper. I'd like to see
> what you do!!

See my previous post.

Clip, did you see me asking for donations on this newsgroup? Chill, brother, grow up. I was only p*ssed that some guy came on the group making a joke of the men and women who are fighting and DYING for our country. Why you thought it would be cute to respond in the way you did confuses the heck out of me! It came from NO WHERE. Making a joke of our troops has NOTHING to do with my web page.

Eric,

Thanks. You made me feel better. :)

I'm worried about those exams because there was always one girl in my math classes who seemed to know everything. She took the first Actuarial exam three times and gave up trying. She gave me her study materials so I think I'm going to give it a try! My head hurts just thinking about studying for the thing!

Of course, spending all my free time playing with my electronic gadgets isn't helping me study for the exams, that's for sure!!

1548. Little Boys on the Net

Newsgroup: rec.radio.scanner
Date: 2003-03-30 20:36:52 UTC
From: Celt Chic <internetstuff47129@yahoo.com>
Message-ID: <EzIha.35152$ja4.2256567@bgtnsc05-news.ops.worldnet.att.net>
Source record: 34063
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

Ok, I think I have this figured out. After a few emails sent to me explaining the nature of some male newsgroup posters, it appears the few men that have attacked me on this board use the internet to make them feel "bad, tough, big, smart, and dominant." In real life they are nothing more than men with what is known as the Napolean-Complex, thus they use the newsgroups to attack others to make their pee-on lives seem better and bigger than they really are. In other words, they NEED to get a life. In real life they wouldn't have the courage to confront me or they wouldn't know what was coming! So, little boys, stop trying to make yourselves feel like grown ups, and attacking me doesn't bother me at all. In fact, it makes me laugh at the low-level IQ you choose to display on these newsgroups. You're probably all wife-beaters, alcholics, burger-flippers, greasy rednecks anyway!!

This kinda sucks because I really enjoy radios and scanners and out of all the newsgroups I've used, it's these two groups that come off as being populated with the socioeconomic downfalls known as rednecks. I don't want to be assocated with that! So, if I am a radio enthusiast, do I automatically fall under the redneck catagory? If so I'd give up this hobby in no time! I didn't know it was like that!!! But that is what I've seen on these groups. I've seen more Nazis in these groups than anywhere else and that helps to prove my theory! I don't want to be associated with redneck Nazis, riding around in the pick-up truck with the State Militia symbol on a decal, as well as the Dixie flag flying out the back with a swastika hanging from their rear-view mirror! You probably bruise your wives!

(Please note, this is ONLY directed to the few men who have attacked me on these newsgroups. Some of you have been kind to me and I hate showing you this side of me as I'd LIKE to be known as a kindred spirit, but I've had enough. I've TRULY had enough. I can only hold it in for so long. I now understand why some lurkers have emailed me explaining why they never post!) I never should have taken up radios because it appears there is a huge association to a social group I don't want to belong to!

You guys can't even get it up! Stop using the internet to make yourselves feel good about yourselves. If you have to use the internet to raise your self esteem then you NEED to get a life. If picking on a woman makes you feel sexual gratification you're truly sickos! That's the ONLY gratification you'll EVER get!

Pick on me because I have a Shortwave Call Sign? Come and pick on me face to face, losers! Pick on me because of my web page? Come and pick on me face to face, creeps!

High school dropouts are what you are!

****AHHHHHH***** I had to get that out of my system. OK. I feel better now. Yep, I feel good. I feel very good to know I'm not the few nasty men I've bumped into on these groups. I'd HATE to be you guys, that's for sure! At least I don't have to use the net to make myself feel big. At least I don't have to pick on different races, religions, political beliefs, or women to make me feel good. I can just be myself and know that's good enough!

Go ahead and respond whatever you will, LET THEM FLY, I'm done talking to you. You will not see any response FROM me TO your messages full of childish antics. Will I read them? Probably, simply so I can get a big ego-boost out of seeing how much better I am than you! One thing's for sure, I'll get a big laugh out of you!!!

I'm going to continue to enjoy these groups. I am NOT going to continue in this war you seem so keen on beginning and continuing. I will only post this ONCE and I am THROUGH with this OFF TOPIC CRAP. Quit trying to pull me into your little games. I know I'm not the only one you've tried to P*** off, I've seen some of you do it to others. You think it is a cute little game!!

(I will still continue to respond and post messages directed to the nice men and women who have shown they can be mature and have a good head on their shoulders, as well as who have helped me grow far in this hobby.)

How on earth a well-cultured person like me got mixed in with a hobby associated with rednecks is beyond me!

PEACE, BROTHERS AND SISTERS! HA! ;)

Oh, you need to learn grammar, Dr. Fred. Dr. of what?? There is no Doctor
I know of that says "your" instead of "you're" where it's appropriate!

Oh, well I'm much higher than you on the IQ status. That's all that matters. I'm done arguing with someone who isn't even in my league. No more responses to you, Clip. Besides, it's time to get this group back on topic.

Try these links
http://strongsignals.net check out the drop down menu for the message boards.
http://groups.yahoo.com/ and type in police scanner or a radio model number
you are interested in or a State name with police scanner.
Usenet is dying out and it won't be around in a couple of years because of
all the lunatics and rejects here.

BTW, when you respond to an article use proper etiquette and don't write
at the top of the post, it makes it easier to follow a conversion when you
write your response under the paragraph or sentence you are responding to.

Don't join these boards or email lists and start insulting or bad
mouthing people or you will find yourself banned from them very quickly.
You are acting no different then the people you criticize with the rant you
just posted.

Fred, I'm sure you know, the grammatical-and-spelling-mistake attack is the most common one taken by those with no ground to stand on.

In spite of that:

To get technical, Celt Chic - if you wanted to be correct, you should have said, "There is no doctor ('doctor' is not capitalized in this sense) I know of that *writes* (not says) 'your' instead of 'you're' where it's appropriate!" You see, it just doesn't make any sense if you say "says" instead of "writes." Think about it.

See how easy it is to tear apart someone else's grammar and spelling?

Thanks for playing.

Hey Back,

Is this better? ;) I didn't know it was such a pain to read messages on top instead of below the original message. I've been doing it all along and no one ever said anything. Had I known before I would have done what is more commonly excepted. Yes, I am getting out of Usenet. You are right. They have pulled me down to their level. Usenet is a facade of people who pretend to be something they're not, and that is exactly what just happened to me! In real life I am not someone who would just rant at someone. I was trying to take up for myself. I felt my toes were stepped on and by golly

they had me down to their level going back at them! I'm a sensitive person in real life who loves people and when someone has something against me it hurts my feelings. I like to be liked by everyone. Apparently on Usenet that will never happen. I had spent time taking up for everyone else that was getting picked on and then when I was the butt of the pranks it backfired and I got, shall we say....just a tad bit upset? ;)

I signed up for the Yahoo groups that include my particular scanner. Now they just need one for shortwave radios so I can get out of here.

Peace,

~~~~~~~Surfing Radio Frequency Waves~~~~~~~

My dearest sweetest IT man Clip:

I come home in the morning light
My mother says when you gonna live your life right
Oh mother dear we're not the fortunate ones
And girls they want to have fun
Oh girls just want to have fun

The phone rings in the middle of the night
My father yells what you gonna do with your life
Oh daddy dear you know you're still number one
But girls they want to have fun
Oh girls just want to have--

That's all they really want
Some fun
When the working day is done
Girls-- they want to have fun
Oh girls just want to have fun

Some boys take a beautiful girl
And hide her away from the rest of the world
I want to be the one to walk in the sun
Oh girls they want to have fun
Oh girls just want to have

That's all they really want
Some fun
When the working day is done
Girls--they want to have fun
Oh girls just want to have fun,
They want to have fun,
They want to have fun...

You say more about yourself in each post, than I could possible say in return.

Bravo.

Why thanks, Clip. You're not such a bad guy after all.

Oh no-there's got to be a better way
Say it again
There's got to be a better way-yeah
What is it good for?
*War has caused unrest
Among the younger generation
Induction then destruction
Who wants to die?
War-huh
What is it good for?
Absolutely nothing
Say it again
War-huh
What is it good for?
Absolutely nothing
Yeah
War-I despise
'Cos it means destruction
Of innocent lives
War means tears
To thousands of mothers how
When their sons go off to fight
And lose their lives
I said
War-huh
It's an enemy of all mankind
No point of war
'Cos you're a man
*(Repeat)
Give it to me one time-now
Give it to me one time-now
War has shattered
Many young men's dreams
We've got no place for it today
They say we must fight to keep our freedom
But Lord, there's just got to be a better way
It ain't nothing but a heartbreaker
War
Friend only to the undertaker
War
War

War-Good God, now
Now
Give it to me one time now
Now now
What is it good for?

Anyone who frequents this list knows Emilio's posts are usually jokes. Often very funny and topical.

Your so-called "Hi-IQ" didn't seem to catch this. Thus, you might have a lower IQ than you thought. Worse, you brought personal issues into a silly pseudo-flame-fest.

Hey chicy, get smart. You may be smart in your social circle, but the internet, for better or worse, is the leveler of all people. You don't impress me....

..you amuse me. (Barely)
Mikey

Yes, this is much better to follow for other people reading your message.
In private email writing on top is fine, but on email lists and newsgroups
it makes it a lot easier for everyone that read the message(s) to know what
you are responding to.

Visit the http://www.hard-core-dx.com/ web site they have a email lists
and newsletter. If you are also interested in monitoring ship, airplanes and
military on HF/Shortwave then check out the WUN club http://www.wunclub.com
they have a monthly electronic news letter and a email lists that people use
to post their logs and other tidbits.

Welcome abroad and this can be a very interesting hobby that will soon fade
into the sunset by 2010 or so. :-(

My work here is done! Someone sees the light!

Anyway, the cyber-begging page was taken down. No one will get suckered
now.

Hi Back,

Thanks for the links. Yes, I am also interested in aircraft freqs. I caught my first airplanes the other day on my scanner and I jumped for joy it was so exciting! I have a few airports around me so the traffic is really nice to listen to. I also live close to the river so I'm hoping to hear something on that band. I will check out those links and sign up for the newsletters.

I also heard something interesting on 11,175kHz SW although I don't know what it is. Is that aircraft?

I don't think high IQ's have anything to do with how long I've been on this newsgroup. I'm not psychic. Now that is one thing that has nothing to do with IQ. By reading a message I'm supposed to know that it's genuine? If there is someone on this planet who can do that I'd sure like to meet them, because I have a good use for them right here! They could interpret all of these newsgroup messages and tell me that less than 10% of them are genuine!

In any case, I don't think anyone should post a message intended as a joke about someone having a son in the war. That isn't funny at all. If we have to sink that low to find humour, then comedy is all out of ideas.

That is the main Armed forces global network frequency. You will hear aircraft, military bases, ships and one way broadcasts that consists of numbers and/or letter groups.

Well, you *could* have perused the older messages to ascertain the veracity of Mr Goldstein's track record. In fact, you've exposed yourself by being ignorant of his 'fun' posts in the past. No matter, as I'm sure you'll have a long-winded answer for everything for that too. And, GOOD for YOU. I disagree with what you've been writing, but..you are an articulate poster. I appreciate that.

It's free speech, you are for free speech right? You seem to exercise your wanton right to it as I see. Hey kid, you may have good vocabulary, which is a very jejune thing to brag about, but when in Rome...We talk scanners and radios here. Do likewise or be prepared to be ignored. (Or laughed at)

Mikey..the cutest name in town

Yep, that's what I heard! I have no idea how to interpret that stuff but
that is one of my goals. Just like the other night when I made a few weird
loggings of people using the phonetic alphabet with numbers that sounded
like secret codes.

What you see on usenet is a very small fraction of radio hobbyists and definately does not represent the radio hobby group. Generally speaking the majority of the best of the best do not or rarely show their faces here probably due to all of the noise. Head over to the message boards on www.strongsignals.net if you want to see how a functional board works. This is mostly a scanner board but there is a small sw group. The Yahoo groups while full of ads tend to be a bit more civil too. There is still good info on the rec. radio groups but you have to put up with the cheap shots and noise, foul mouths etc. This is usenet.

You are involved in a great hobby, don't let a few of those who hide behind the Internet discourage you. Many have left here for the more calm and quiet of Yahoo type groups of Strongsignals.

Yea, just tell yourself they all deserved it. Makes your anti-war
statements easier to deal with. Sleeping well now?

1581. FS/T: UHF and Dual Band HT's

Newsgroup: rec.radio.scanner
Date: 2003-03-30 23:01:12 UTC
From: "Jim Wardrip, W8EMS" <w8ems@juno.com>
Message-ID: <2pte8v8qbmqf0mehubtle6fr27vf8m0ulg@4ax.com>
Source record: 33997

Icom IC-12U 12 Channel 460 Mhz HT, no charger.* Currently on UHF med channels. Diode programmable.

EF Johnson "Scropion" 16 channel UHF HT, charger 2 extra batteries. Programmed on business and FRS channels.

2 Motorola HT-440, 2 channel UHF with 1 charger, 2 extra batteries and 2 microphones. Also 1 non working HT-90 for parts.

*will charge directly from 13.8 v. jack in back of battery pack.

All radios are in good physical and operating condition. Will trade all the above for a small 5 watt, 16 channel VHF (150-160 Mhz) HT and rapid charger or sell all for highest offer. I cannot reprogram radios. Prefer to sell all to one buyer rather than ship individually.

Questions or offers to: w8ems@juno.com

First listing was accidently left off previous post. Should read as follows:

Yaesu FTH-2070 32 channel dual band, drop in rapid charger. Currently on VHF Fire, EMS and UHF fire and med channels. Will do ham bands.

Icom IC-12U 12 Channel 460 Mhz HT, no charger.* Currently on UHF med channels. Diode programmable.

EF Johnson "Scropion" 16 channel UHF HT, charger 2 extra batteries. Programmed on business and FRS channels.

2 Motorola HT-440, 2 channel UHF with 1 charger, 2 extra batteries and 2 microphones. Also 1 non working HT-90 for parts.

*will charge directly from 13.8 v. jack in back of battery pack.

Jeez, you're weird. "Blow your mind?" what does that mean anyway?

ROFLMAO!

Seriously, you've posted, something like ten messages to prove..what?

ROFLMAO!

You quote a dumb lyric and think it's 'clever'?

ROTFLMAO!

Hey chic, or whatever...you've made a fool of yourself.

ROTFLMAO!!!

Mikey "mind blower"
